Yonah Development: A concrete gravity dam on Tugalo River about 90 feet in maximum height and 980 feet long, including 450 feet of spillway controlled by flashboards. The reservoir has an area of 325 acres at full pond elevation 744.2 feet m.s.l. The powerhouse at the toe of the dam houses three vertical Francis type turbines directly connected to generators having a total nameplate capacity of 22,500 kw.

and appurtenant mechanical and electrical facilities; the location, nature and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 of 16 (FPC No. 2354–2) entitled "North Georgia Development; Burton Project; General Plan, Elevations and Typical Sections of Dam".

Sheet 2 of 16 (FPC No. 2354–3) entitled "North Georgia Development; Burton Project; Floor Plan of Turbine Room, Plan of Generator Deck and Transverse Section".

Sheet 3 of 16 (FPC No. 2354–4) entitled "North Georgia Development; Nacoochee Project; General Plan, Elevations and Typical Sections of Dam".

Sheet 4 of 16 (FPC No. 2354–5) entitled "North Georgia Development; Nacoochee Project; Floor Plans and Transverse Sections".

Sheet 5 of 16 (FPC No. 2354–6) entitled "North Georgia Development; Mathis-Terrora Project; General Arrangement, Details of Intake, Tunnel, & Surge Tank".

Sheet 6 of 16 (FPC No. 2354–7) entitled "North Georgia Development; Mathis-Terrora Project; Powerhouse Plan, Elevation & Transverse Section".

Sheet 7 of 16 (FPC No. 2354–8) entitled "North Georgia Development; Mathis-Terrora Project; Plan and Elevation Penstocks".

Sheet 8 of 16 (FPC No. 2354–9) entitled "North Georgia Development; Mathis-Terrora Project; Plan Elevation and Section Dam".

Sheet 9 of 16 (FPC No. 2354–10) entitled "North Georgia Development; Tallulah Falls Project; General Plan of Project and Typical Sections of Tunnel".

Section 10 of 16 (FPC No. 2354–11) entitled "North Georgia Development; Tallulah Falls Project; Plan and Transverse Section of Powerhouse and Switch House and Section Thru Surge Tank".

Sheet 11 of 16 (FPC No. 2354–12) entitled "North Georgia Development; Tallulah Falls Project; Plan of Dam and Intake, Elevation of Dam and Typical Sections of Dam and Intake".

Sheet 12 of 16 (FPC No. 2354–13) entitled "North Georgia Development; Tallulah Falls Project; General Plan and Profile Along Penstock No. 6".

Sheet 13 of 16 (FPC No. 2354–14) entitled "North Georgia Development; Tugalo Project; General Plan, Elevation and Typical Sections of Dam".

Sheet 14 of 16 (FPC No. 2354–15) entitled "North Georgia Development; Tugalo Project; General Plans of Turbine Room and Generator Room Floors & Transverse Section Thru Powerhouse and Intake".

Sheet 15 of 16 (FPC No. 2354–16) entitled "North Georgia Development; Yonah Project; General Plan, Elevations & Typical Sections of Dam".

Sheet 16 of 16 (FPC No. 2354–17) entitled "North Georgia Development; Yenah Project; Floor Plans & Transverse Section".

Exhibit M: Twelve letter-size sheets giving general descriptions of equipment, except insofar as it states that the transmission lines are excluded from the project.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period January 1, 1956, through December 31, 1963, one (1) cent per horsepower on the authorized installed capacity (221,900 horsepower) plus two and one half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; beginning January 1, 1964, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 221,900 horsepower.

Article 29. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 30. The Licensee shall, within one year from the date of issuance of this license, file in conformity with the Commission's rules and regulations an application for amendment of license to include the transmission lines listed in finding (8) above.

Article 31. The Licensee shall, within one year from the date of issuance of this license, file in conformity with the Commission's rules and regulations Exhibits F and K, showing and describing the project lands and project boundary.

Article 32. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., DOCKET NO. G-8969, ET AL.[1]

ORDER TERMINATING PROCEEDINGS

(Issued May 7, 1964)

On December 30, 1963, we issued an order in these proceedings approving a rate settlement proposal, terminating proceedings and prescribing refunds. The order provided, *inter alia*, that the Section 4(e) proceedings listed in Appendix A to the order, shall terminate upon full compliance by Texaco with all the terms and provisions of the order. Not included among the Section 4(e) proceedings set forth in Appendix A were certain of such proceedings which relate to proposed increased rates, never made effective, under certain of the rate schedules for which settlement rates were approved. Accordingly, it is appropriate that the proceedings concerning such proposed increased rates be severed from related area rate proceedings, and terminated at the same time as the proceedings set forth in Appendix A to the order of December 30, 1963, and under the same terms and provisions.

The Commission finds:

The proposed settlement of the subject proceedings having been approved by order issued December 30, 1963, and the proposed increased rates concerned therein never having been made effective, good cause exists for terminating the proceedings, and for severing certain of the proceedings from related area rate proceedings.

The Commission orders:

Upon full compliance by Texaco Inc. with all the terms and provisions of the order issued herein on December 30, 1963, the Section 4(e) proceedings listed in the appendix hereto shall terminate, and certain of said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR64-1 and AR64-2.

APPENDIX

Rate Schedule Nos.:	*Docket Nos.*	Rate Schedule Nos.:	*Docket Nos.*
2	RI64-266	184	[1] RI64-126
3	RI64-265	200	RI64-264
4	RI64-264	201	[1] RI64-10

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SABINE RIVER AUTHORITY OF TEXAS AND SABINE RIVER AUTHORITY OF LOUISIANA, PROJECT NO. 2305

ORDER EXTENDING TIME FOR FILING PLAN FOR CLEARING PROJECT RESERVOIR

(Issued May 8, 1964)

On March 13, 1964, Sabine River Authority of Texas and Sabine River Authority of Louisiana, joint licensees for proposed Project No. 2305, filed a joint application for an extension of six months within which to file for Commission approval a plan for clearing the project reservoir. Article 36 of the license requires the filing of such a plan within six months of October 14, 1963, the date of issuance of the license.

In support of their joint application, the licensees point out that under Article 35 of their license, they are required to file within one year of the issuance date of their license, for Commission approval, a proposed recreational use plan for the project "prepared after consultation with appropriate Federal, State, and local agencies [which plan] shall include recreational improvements which may be provided by others in addition to the improvements the Licensees plan to provide." The licensees are working on such a plan and anticipate that the full period of one year will be needed because of the required consultation with interested agencies.

The licensees advise that the contract for construction of the project dam, spillway and other major works is scheduled to be let in April of this year and that four years' construction time for such works is anticipated, as is permitted by the license. Because of heavy rainfall and fast growth characteristics of trees and underbrush in the reservoir area, the joint licensees propose that the clearing be accomplished during the construction period on a time schedule that will minimize "regrowth" prior to closure and filling.

The licensees point out the need for closely coordinating the clearing plan with the recreational use plan. It appears that ample time will be available for clearing after the spring and summer growth period of 1965.

The Commission finds:

In the circumstances recited above, it will not be incompatible with the public interest to grant the requested extension.

The Commission orders:

The time required by Article 36 of the license for Project No. 2305 for submittal of the clearing plan for Commission approval is hereby extended to October 13, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

VIRGINIA ELECTRIC & POWER COMPANY, PROJECT NO. 2009

ORDER CLARIFYING LICENSE

(Issued May 8, 1964)

By letter dated February 4, 1964, Virginia Electric & Power Company has called our attention to the need to clarify the language of its license for Project

No. 2009 by removing an ambiguity apparent in the language set forth in Articles 30 and 31 of the license.

As the licensee correctly points out, an amendment of the license, issued August 21, 1956, established in subparagraph (D)(4) a procedure by which, upon approval of the named State Agency, the licensee could make a proposed disposition of project lands, "without further restriction by this paragraph, but subject to other provisions of the license". Subparagraph (D)(4) included also the provision that the entire project area shall be open to free use by the public, so that after the required clearance under the established procedure, that provision would no longer apply. The licensee points out further that with subsequent amendment of the license (order issued March 25, 1960), the language dealing with free public use of the entire project area was placed separately in Article 30, and the procedure for making disposition of project lands after clearance with the State agency was included in the succeeding Article 31, and the proviso in Article 31 reads that such disposition should be "subject to the other provisions of the license". The words "without further restriction by Article 30 of the license" were omitted in Article 31.

While it does not appear necessary to reserve all project waters and adjacent project lands for public access, (except such as are reserved for reasons of safety and efficient operation of the power facilities), it is desirable that the Commission retain authority to require that the licensee make adequate provision for public recreation as hereinafter provided.

The Commission finds:

In the circumstances, clarification of the license is appropriate and desirable.

The Commission orders:

(A) Article 31 of the license for Project No. 2009 is hereby revised to read as follows:

Article 31(a) After notice to the North Carolina Wildlife Resources Commission or to the Virginia Commission of Game and Inland Fisheries as to project lands in the State of North Carolina or in the State of Virginia, respectively, of a plan for disposition of any interest in project lands, the Licensee may effect the same without further restriction by Article 30 of the license, but subject to the other provisions of the license, unless, within 30 days of any such notice such state agencies shall advise the Federal Power Commission of any objection to the disposition, in which event the matter shall be determined by the Commission: *provided, however*, that until such time as a recreational plan is approved by the Commission pursuant to Article 31(b) hereof, no interest in project lands shall be disposed of without the approval of the Federal Power Commission.

Article 31(b) The Licensee shall, within six (6) months from the date of issuance of this order, file for Commission approval a plan showing the existing and proposed facilities for public utilization of project waters and adjacent project lands for recreational purposes. The plan shall show the location of the project lands and waters for existing and proposed camping, picnicking, bathing, boating, fishing, hunting and similar recreational activities, including sanitary facilities, boat-launching ramps and access roads and trails. The project lands included in the plan as approved will not be available for disposition pursuant to Article 31(a) of this license.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In the acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITY OF ANCHORAGE, ALASKA, PROJECT NO. 2405

ORDER ISSUING PRELIMINARY PERMIT

(Issued May 11, 1964)

Application was filed on September 3, 1963 by the City of Anchorage, Alaska (Applicant), for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2405, to be located on Eagle River, approximately 2 miles upstream from the Glen Highway crossing in the Third Judicial Division, State of Alaska, affecting public lands of the United States in the general vicinity of Anchorage, Eagle River and Chugiak.

As described in the application, the project will consist of: an earth-fill dam creating a reservoir with a maximum elevation of 450 feet; a concrete lined saddle spillway; a steel penstock; a powerhouse at elevation 260 feet, containing a 15,000 kilowatt generating unit; and other necessary appurtenances and structures.

According to the application, power to be generated, estimated at 48,200,000 kilowatt hours annually, will be used as additional energy to augment Applicant's energy requirements and to provide energy and capacity for participation in power pooling arrangements with other generating electric utilities in the area. The development will also include provisions for Applicant's future water supply.

The Secretary of the Army and the Chief of Engineers, in commenting on the application, stated that insertion in the permit of special terms and conditions in the interest of navigation is not considered necessary.

The Department of the Interior, in commenting on the application, recommended for inclusion in any permit issued, special conditions in the interests of the Department.

The Department of Health, Education and Welfare, in commenting on the application, recommended that Applicant consult with the Alaska Department of Health on measures that may be necessary for mosquito control.

The Alaska Department of Fish and Game, in commenting on the application has not recommended any special conditions for inclusion in the permit.

Applicant requests a preliminary permit for a period of 30 months. It appears appropriate, however, that the initial period of the permit should be 24 months as hereinafter provided.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit.

The Commission finds:

(1) Applicant is a municipal corporation organized under the laws of the State of Alaska.

(2) Public notice of the filing of the application has been given and no formal protests or petitions to intervene have been received. However, three informal protests have been received from individuals expressing concern that the proposed project may affect their respective properties or claimed interest therein.

(3) The proposed project will affect public lands of the United States but will not affect any Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to the City of Anchorage, Alaska (hereinafter referred to as the Permittee), for a period of 24 months, effective as of May 1, 1964, for the sole purpose of maintaining priority of application for a license for Project No. 2405, affecting public lands of the United States, subject to the terms and conditions of the Act which is incorporated by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is also subject to the terms and conditions set forth in Form P-1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303-1305), which terms and conditions (designated as Articles 1 through 8) are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, San Francisco, California, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Alaska Department of Fish and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss or damage to those resources, and (3) to develop and improve those resources where practicable.

Article 11. The Permittee shall, during the period of project planning, consult with the Department of Anthropology at the University of Alaska, College, Alaska, to determine the cost of salvage of archeological remains which may be found in the project area, and shall advance to the University an amount not to exceed $1,000 for this purpose.

Article 12. The Permittee shall, during the period of project planning, consult with the Alaska Department of Health to determine measures that may be necessary for the control of mosquito production.

Article 13. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

Article 14. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission regulations under the Federal Power Act.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EARL C. BROOKOVER, DOCKET NO. RI62-338

ORDER TERMINATING PROCEEDING

(Issued May 11, 1964)

On January 29, 1962, Earl C. Brookover (Brookover) tendered for filing Supplements Nos. 1, 2 and 3[1] to Brookover's FPC Gas Rate Schedule No. 1, proposing rate increases from 8.9329¢ to 12.0¢ and 14.0¢ per Mcf, respectively, for his jurisdictional sales of natural gas being made at the wellhead to Kansas-Colorado Utilities, Inc., from different formations, as explained below, in a 640 acre unit located in Grant County, Kansas. By order issued February 16, 1962, the Commission suspended the above supplements until August 1, 1962, and thereafter until made effective in the manner prescribed by the Natural Gas Act.

A motion was filed by Brookover on November 4, 1963, requesting that the rate suspension proceeding in Docket No. RI62-338 be terminated. In support of his request, Brookover states that the proposed rates were for a new sale and should not have been suspended. Brookover further states that the underlying rate of 8.9329¢ was applicable to the sale of gas under the superseded contract which covered production specifically from only the one well then in production and did not cover future wells. In November 1961, the original well on the unit ceased production and the well was plugged and abandoned. Brookover then drilled another well at a different location on the same acreage and secured production from two different producing formations (Hugoton and Council Grove) via the dual completion method. Production from both formations are segregated and metered separately. Thereafter, the parties negotiated a new contract on December 6, 1961, providing for rates of 12¢ and 14¢ per Mcf, respectively, for the two zones. The filing involved here relates to sales under the new contract.

Under the circumstances, we believe that it would be in the public interest to terminate the rate suspension proceeding in Docket No. RI62-338 effective as of April 1, 1964.

---

[1] Supplement No. 1 consists of the superseding contract. Supplement No. 2 consists of an amendment to the superseding contract. Supplement No. 3 proposed a rate increase from 8.9329¢ to 12¢ and 14¢.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder that Supplements Nos. 1 through 3 to Brookover's FPC Gas Rate Schedule No. 1 be permitted to become effective as of April 1, 1964, and to terminate the proceeding in Docket No. RI62–338.

The Commission orders:

(A) Supplements Nos. 1 through 3 to Brookover's FPC Gas Rate Schedule No. 1 are hereby made effective as of April 1, 1964.

(B) The proceeding in Docket No. RI62–338 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CAROLINA POWER & LIGHT COMPANY, DOCKET NO. E–7078

ORDER ACCEPTING RATE SCHEDULES FOR FILING AND TERMINATING PROCEEDING

(Issued May 11, 1964)

On January 23, 1963, the Commission issued an Order to Show Cause and Providing for Hearing at which the Carolina Power & Light Company (Carolina) was directed to show cause why the Commission should not find and determine *inter alia* that Carolina sales of electric power and energy at wholesale for resale to 39 purchasers listed in that order are sales at wholesale in interstate commerce; and that Carolina should be required to file rate schedules for those services in accordance with the provisions and requirements of Section 205(c) of the Federal Power Act and Part 35.3 of the Commission's Regulations thereunder.

Prior to the commencement of that hearing, Carolina tendered for filing 38 initial rate schedules, service to one of the 39 customers referred to in the Commission's order, Mountain Retreat Association, having been discontinued. The Company also tendered for filing changes in rate schedules previously filed for six resale customers, changes in two of the rate schedules tendered initially at this time, all as shown in the annexed Appendix A.*

By letter dated October 22, 1963 Carolina requested that the Commission's Order to Show Cause be vacated and this proceeding be terminated.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act that the rate schedules as identified and designated in the annexed Appendix A be accepted for filing, with designations and effective dates as shown therein.

(2) It is necessary and appropriate for purposes of the Federal Power Act that this proceeding be terminated, as hereinafter ordered.

The Commission orders:

(A) The rate schedules identified and designated in annexed Appendix A are hereby accepted for filing, to become effective on the dates therein shown.

(B) The proceeding initiated by order of the Commission issued January 23, 1963, in Docket No. E–7078 is hereby terminated.

(C) Nothing contained in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate, provided for in the above rate schedules; and this order is without prejudice to any findings or orders which have been or hereafter may be made by the Commission in any proceeding by or against Carolina.

---

*Omitted in printing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLUMBUS AND SOUTHERN OHIO ELECTRIC COMPANY, PROJECT NO. 2393

ORDER ISSUING PRELIMINARY PERMIT

(Issued May 11, 1964)

Application was filed on August 7, 1963 by Columbus and Southern Ohio Electric Company (Applicant) of Columbus, Ohio, for a preliminary permit for a period of 24 months under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2393 involving the installation of power generating facilities at the existing U.S. Corps of Engineers' Gallipolis Locks and Dam on the Ohio River in Gallia County, Ohio.

The Secretary of the Army and the Chief of Engineers, in commenting on the application recommended any permit issued should require Applicant to coordinate its studies and proposals with the District Engineer, U.S. Army Engineer District, Huntington, West Virginia, to insure protection of the Federal interests, particularly with regard to structural and operational features affecting navigation and recreation.

The Department of the Interior, in commenting on the application, recommended for inclusion in any permit issued, a condition requiring coordination with the U.S. Fish and Wildlife Service and the State conservation agencies during the planning period to insure protection of fish and wildlife resources.

The Department of Health, Education and Welfare, in commenting on the application, stated that the installation of power facilities at navigation dams can be expected to affect water quality during low flow periods and that preliminary planning should give consideration to possible adverse effects and methods of minimizing or avoiding them.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Ohio.

(2) Public notice of the application has been given as required by the Act. No protests have been received.

(3) The proposed project would utilize water power from a Government dam.

The Commission orders:

(A) This preliminary permit is hereby issued to Columbus and Southern Ohio Electric Company (hereinafter referred to as the Permittee) for a period of 24 months, effective as of May 1, 1964, for the sole purpose of maintaining priority of application for license for Project No. 2393, to be located on the Ohio River in Gallia County, Ohio, and affecting a Government dam, subject to the terms and conditions of the Act, which is incorporated by reference as of part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2393, to be known as the Gallipolis Dam Project, would consist of a powerhouse containing hydroelectric units totalling about 40,000 kilowatts located next to Gate Pier No. 9 on the Ohio side of the existing Gallipolis Locks and Dam.

(C) This permit is also subject to the terms and conditions set forth in Form P-1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305), which terms and conditions designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. **The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, New York, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.**

Article 10. **The Permittee shall, during the period of project planning coordinate its studies with the District Engineer, Corps of Engineers, U.S. Army Engineer District, Huntington, West Virginia, in order to permit evaluation of any effects on the authorized and incidental functions of the Gallipolis Locks and Dam.**

Article 11. **The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service, the Ohio Department of Natural Resources, Division of Wildlife, and the West Virginia Department of Natural Resources, Division of Game and Fish, for the purpose of planning and designing adequate conservation measures to mitigate and compensate for the loss of or damage to existing fish and wildlife resources and to develop and improve these resources where practicable.**

Article 12. **The Permittee shall, during the period of project planning, cooperate with the United States Public Health Service, Department of Health, Education and Welfare, in order that adequate consideration can be given to the effect of the project on water quality at low flow periods.**

Article 13. **The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.**

Article 14. **The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission regulations under the Federal Power Act.**

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SAM HOUSTON PUBLIC UTILITY DISTRICT, DOCKET NO. CP62-182

ORDER FURTHER AMENDING ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 11, 1964)

On April 6, 1964, Sam Houston Public Utility District (Utility District), Erin, Tennessee, filed in Docket No. CP62-182 an application to further[1] amend the order of the Commission issued November 19, 1962, which directed Tennessee Gas Transmission Company (Tennessee) to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Utility District, and provided in connection therewith that the Utility District be prepared to receive natural gas from Tennessee within one year from the date of the order (November 19, 1962). By the application to amend, Utility District seeks to further extend the time to receive natural gas to September 3, 1964.

Utility District states through its attorney that the project bonds of Utility District have been sold and a contract for the construction of required facilities has been executed. The additional time is requested to enable Utility District to comply with condition fixed in paragraph (B) of the Commission's order of November 19, 1962, as amended.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 19, 1962, in Docket No. CP62-182 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued November 19, 1962, in Docket No. CP62-182 be and the same is hereby further amended by extending to September 3, 1964, the time in which Utility District shall be prepared to receive natural gas from Tennessee.

(B) In all other respects said order shall remain in full force and effect.

---

[1] Order of November 19, 1962, amended April 19, 1963; and time for taking gas extended by Notice of Secretary dated October 22, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. RP64-28

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued May 11, 1964)

Transcontinental Gas Pipe Line Corporation (Transco), on March 20, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volumes Nos. 1 and 2,[1] to become effective January 1, 1964.[2]

The revisions propose changes which would effect a reduction in Transco's jurisdictional rates of approximately $1,144,908, annually, based upon sales and transportation of gas for the twelve-months' period ended October 31, 1963, as adjusted.

The proposed filing, which we have docketed, as shown above, reflects a reduction in Transco's cost of service, based upon the recent reduction in the Federal income tax rate for corporations from 52 percent to 50 percent. In computing the reduction per Mcf, Transco employed the cost of service utilized in connection with its reduction in GSS (General Storage Service) rates in Docket No. RP64-22. The proposed rate filing is not intended to change or otherwise affect the obligations which Transco has under the settlement agreement in Docket No. RP61-13, Transco's last rate proceeding.[3] Transco undertakes and agrees that it will continue to be bound by the provisions of such settlement agreement in the same manner and to the same extent as it would have been bound if this filing had not been made.

The reflection of the lower Federal income tax rate reduces Transco's sales rates and transportation rates by 0.2¢ per Mcf or $1,144,908, annually. A comparison of the present and proposed rates is contained in Appendix A, hereto.

Transco also intends to make refunds for past billings to reflect the retroactive effective date of January 1, 1964.

Transco requests waiver of the requirements of the Commission's Rules and Regulations as may be necessary to permit the tendered tariff sheets to become effective as proposed.

In addition to Transco's proposed rate reduction filed to reflect the reduced Federal income tax rate, Transco requests that it be discharged from any further obligations with respect to reserves heretofore set upon its books in compliance with orders approving settlements and issuing certificates of public convenience and necessity, *In the Matters of Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.* The specific producers, their docket numbers and the dates of the Commission orders are listed in Appendix B to this order.

---

[1] Second Revised Sheets Nos. 28-A.1 and 28-A.4: Substitute Second Revised Sheets Nos. 17-N and 17-O; Fourth Revised Sheets Nos. 17-N and 17-O; Sixth Revised Sheet No. 27; Seventh Revised Sheets Nos. 26-G, 26-L and 26-Q; Eleventh Revised Sheets Nos. 28-K.2 and 28-DD; Twelfth Revised Sheet No. 28-AA; Thirteenth Revised Sheet No. 28-P; Seventeenth Revised Sheets Nos. 17-F and 26-B; Eighteenth Revised Sheet No. 17-B; Nineteenth Revised Sheets Nos. 9 and 28-I; Twentieth Revised Sheets Nos. 16, 19 and 24; and Twenty-first Revised Sheets Nos. 5 and 12 to its FPC Gas Tariff, Original Volume No. 1; and Eleventh Revised Sheet No. 51 to its Tariff, Original Volume No. 2.

[2] Except Fourth Revised Sheets Nos. 17-N and 17-P, which are proposed to become effective as of March 1, 1964, these latter two sheets reflect further reductions in Transco's Rate Schedule GSS beyond those which were made effective as of March 1, 1964, by order of the Commission, issued April 13, 1964, in Docket No. RP64-22.

[3] Order issued February 2, 1962.

In support of this request, Transco states that by agreeing to make the tax rate reduction effective January 1, 1964, it will pass on approximately $300,000 more than if such reduction were made effective prospectively; that Transco made its reduction in its GSS storage rates (Docket No. RP64–22) effective on March 1, 1964, one month earlier than it had first proposed, thereby passing on to its customers approximately $125,000 additionally, and that retention of the minor refunds and reductions received from suppliers listed in the Appendix hereto will not place Transco in an excess earnings position. As further support, Transco also notes that since the settlement of its Docket No. RP61–13, it has reduced its rates (including the GSS reduction and the one herein proposed) by $8,500,000 and has also undertaken to further reduce its rates by $1,200,000 as of January 1, 1965.

The Commission has reviewed the cost and revenue data submitted by Transco in support of the instant reduction reflecting the reduced Federal income tax rate and, based thereon, finds that it is appropriate to grant Transco's request that it be relieved from the obligations with respect to the reserves heretofore set upon its books in compliance with the various *Union Texas* orders.

The Commission finds:

(1) Good cause exists for waiving the 30-day notice and other requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

(2) The proposed revised tariff sheets and the rate reductions contained therein are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

(3) It is reasonable and appropriate that Transco be discharged from its obligations with respect to the reserves heretofore set up on its books in compliance with the settlement orders of producers listed in the Appendix hereto.

The Commission orders:

(A) The 30-day notice requirement and other provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets described above are accepted for filing, to be effective as of January 1, 1964, and March 1, 1964, as indicated thereon, subject to the terms and conditions of this order.

(B) This order shall not be construed as relieving Transco from its existing obligations under the settlement agreement and Commission order in Docket No. RP61–13, issued February 2, 1962, including obligations relating to future refunds and rate reductions.

(C) Transco hereby is discharged from any further obligations with respect to the reserves heretofore set upon its books in compliance with the orders approving settlements and issuing certificates of public convenience and necessity listed in Appendix B hereto. This order shall not be deemed to relieve Transco from any obligation in the future to set up reserves or disburse funds therefrom as a result of Commission orders relating to Transco's suppliers.

(D) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Transco, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Transco or any other persons or parties affected by this order.

OPINION NO. 401-A

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-161

OPINION AND ORDER DENYING REHEARING

(Issued May 11, 1964)

Syllabus

1. **Reviewing *Colton*, Commission *notes* Supreme Court re-emphasized Congressional denial of states power to regulate wholesale sales to local distribution companies. P. 1153.**

2. Congress intended Commission to exercise jurisdiction over wholesale sales from an interstate transmission system—contrary decision would result in regulatory chaos with respect to sales in this area. P. 1155.

3. Congress did not contemplate that a certain sale would be subject to federal regulation one day and state regulation the next, depending on vagaries of a pipeline's integrated system operations; adoption of a variable jurisdiction theory would not be sound. Pp. 1155, 1156.

4. *Denying* rehearing, Commission *affirms* prior decision that instant sales are jurisdictional. P. 1156.

Commissioners Woodward and O'Connor *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Ross, *Commissioner:*

Applications for rehearing have been filed herein by United Gas Pipe Line Company (United), Louisiana Gas Service Co., the Louisiana Public Service Commission, and by Hammond-Baton Rouge Brick Co., *et al.* These applications raise no new questions, and we adhere to our original conclusion.

The recently decided *Colton* case confirms our decision.[1] While the precise factual situation differs from that presented here, the Supreme Court's rationale was not premised on the particular circumstances of that case and is equally applicable to the instant case. In *Colton*, the Court of Appeals had confined F.P.C. jurisdiction to those interstate wholesales constitutionally beyond the power of state regulation by force of the commerce clause of the Constitution. It expressly rejected the argument that § 201 of the Power Act incorporated a Congressional decision against deciding the F.P.C.'s jurisdiction by a case-by-case analysis. The lower Court thus employed a test which would bring under federal regulation only those sales of electric energy in interstate commerce at wholesale which had an impact upon the national interest.

The Supreme Court reversed this holding. Reviewing earlier attempts to draw a satisfactory line between federal and state regulation, it referred to the series of cases which had emphasized the nature of state regulation, the objective of the state and the effect of the state regulation upon the national interest in the commerce. This line has now clearly been over thrown by the *Colton* case, for the Supreme Court re-emphasizes that the *Illinois* case[2] stands for the proposition that Congress denied states the power to regulate wholesale sales to local distribution companies.

Continuing, the Supreme Court pointed out that this conclusion was reaffirmed and sharpened in the *Panhandle* case.[3] In that case the Court held that "the line of the statute was thus clear and complete. It cut sharply and clearly between sales for resale and direct sales for consumptive uses. No exceptions were made in either category for particular uses; quantities or otherwise". (332 U.S. 517, quoted in *Colton, supra*)

In conclusion, the Supreme Court in *Colton*, in short but succinct language, cuts the Gordian knot very simply by stating:

---

[1] *F.P.C. v. So. Calif. Edison Co., et al.*, Nos. 71 and 73, decided March 2, 1964, 376 U.S. 205. The fact that this case involved the Federal Power Act is immaterial:

> The Natural Gas Act grew out of the same judicial history as did the part of the Federal Power Act with which we are concerned; and § 201 (b) of the Power Act has its counterpart in § 1(b) of the Gas Act . . . [*Colton, pp. 211–212.*]

[2] *Illinois Natural Gas Co. v. Central Ill. Public Service Co.*, 314 U.S. 498, 505, cited in *Colton, supra.*

[3] *Panhandle Eastern Pipe Line Co. v. Public Service Comm.*, 332 U.S. 507.

> Congress meant to draw a bright line easily ascertained, between state and federal jurisdiction, making unnecessary such case-by-case analysis [pp. 215-216.]

Indeed it is manifest that Congress, in passing the Natural Gas and Power Acts, intended to resolve the confusion prevailing as to the extent of federal *vis a vis* state regulation. And the legislative history of the Gas Act makes it quite clear just where Congress drew the dividing line between what was interstate commerce and what was not.

The issue here is whether United needs a certificate under Section 7 of the Gas Act to make the instant sales, or whether the certificates heretofore granted should be vacated. Section 7 was significantly amended in 1942. The House Committee report states:

> The bill when enacted will have the effect of giving the Commission an opportunity to scrutinize the financial setup, the adequacy of the gas reserves, the feasibility and adequacy of the proposed services [*i.e.*, proposed sales] and the characteristics of the rate structure in connection with the proposed construction or extension at a time when such vital matters can readily be modified as the public interest may demand. Without such authority, the Commission may find itself confronted with a situation where it must either accept conditions which appear undesirable in the public interest, or require, subsequent to construction, changes which may have much more serious practical consequences than they would have had if they had been made before the public was asked to finance the enterprise.
>
> The bill, as amended, eliminates the objections to the present section 7(c) above mentioned. *By this legislation, the present jurisdictional disputes are eliminated. . . .*[4] [emphasis added.]

Initially, the bill (H.R. 5249) contained a subsection (h) which was proposed by NARUC. This subsection would have given the states where gas was produced the power to order intrastate expansion of the facilities of interstate pipelines. This section was made subject to the F.P.C. finding that interstate customers would not thereby be adversely affected. Even this limited grant of authority over interstate pipelines requested by the states failed to pass Congress. While the Committee report premised its rejection on its desire to devote further study to the matter, this action is consistent with the clear line Congress drew between federal and state regulation.

H.R. 4051, 80th Congress, 1st Session, (1947) was a comprehensive bill directed to amending the scope of the Commission's jurisdiction covering a wide range of its regulatory efforts with respect to gas companies. The Committee Report states that the bill would not alter the basic jurisdiction of the F.P.C. over interstate pipelines.[5]

Throughout the debate on the bill, it was assumed without exception that the Commission had jurisdiction from the moment the gas left the gathering lines and was injected into the interstate transmission system. To eliminate any confusion, Congressman Rizley who sponsored the bill prepared a chart which clearly delineated that jurisdiction which the Commission was initially granted and which it would retain under the bill. This chart is reproduced as Appendix A hereto.

---

[4] House of Representatives Report No. 1290, 77th Congress, 1st Session.

[5] Report of House Committee on Interstate and Foreign Commerce No. 800, July 7, 1947.

In debating the bill, Mr. Harris declared:

> When the Natural Gas Act was passed in 1938 it was understood that it was the intention of Congress that the jurisdiction of the Federal Power Commission should begin at the inlet of the trunk line in interstate commerce where the gathering from production terminates and the gas goes into the trunk line, and end at the other end of the trunk line where it goes into the distributor line or facilities for resale to the consumer. [*Congressional Record*—House, July 11, 1947, p. 8741.]

Mr. Rizley similarly indicated:

> The jurisdiction of the Federal Power Commission can only begin where the gas enters the interstate line and ends where it leaves the line. [*Congressional Record, supra*, p. 8748.]

Congress again passed upon the scope of the Commission's jurisdiction in 1954 when the Hinshaw bill was passed. No attempt was made to carve out what Congress earlier considered to be the complete jurisdiction of the Commission over interstate facilities.

This legislative history is concerned with the overall scope of the Commission's jurisdiction under Section 7 and is not limited, as the minority erroneously asserts, solely to the F.P.C.'s jurisdiction over interstate facilities.

In the light of the foregoing, we are convinced that Congress intended us to exercise jurisdiction over wholesale sales from an interstate transmission system. A contrary decision would result in a regulatory chaos with respect to the sales in this area[6] certainly not the clear cut dichotomy envisioned by Congress and enforced by the Supreme Court.

The record in this case shows that 8 of the communities, on specific occasions, have received offshore gas, *i.e.*, gas from a point out of the state. But such gas is received sporadically. The record further indicates that offshore gas travelled in the direction of most of the remaining 13 communities although they received no such gas on the few days when checks were made.[7] No reason exists why these communities could not receive offshore gas. Because of the automated nature of United's system, a slight change in either United's purchasing or sales pattern could result in offshore gas moving down the line beyond Independence to Natalbany, a matter of only some 6 miles. Hammond is only 3 miles further. Any failure in United's line connecting the Florida Parishes lateral to the Lirette-Mobile line would necessarily result in out-of-state gas serving all such communities. As the minority has correctly noted, the quantities of gas moving beyond Independence could not well be determined. It is likely some of these communities would only receive offshore gas a few weeks, a few days, or perhaps a few hours annually.

There is also the back-flow of Louisiana produced gas across the Mississippi-Louisiana border, *i.e.*, gas from a point outside the state. Here again, the record fails to disclose which communities receive "back-flow" gas or to what extent.

As stated above, Congress meant to resolve the uncertainties of jurisdiction in enacting the Natural Gas Act. It surely contemplated no situation where a certain sale would be subject to federal regulation one day and state regulation the next, depending on the vagaries of a pipeline's integrated system operations.[8]

---

[6] Our original opinion stated that all 21 of the sales are to communities in the Jackson zone. Actually, four of the sales, *i.e.*, Doyle, Livingston, Port Vincent and Walker are in the New Orleans zone.

[7] United states we erred in finding that communities as far east as Slidell received offshore gas. We made no such finding. We simply were alluding to the testimony that such gas travelled toward Slidell, recognizing that the record does not indicate whether Slidell actually received offshore gas.

Adoption of a variable jurisdictional theory would not be sound. These Louisiana communities could never be certain whether the intrastate rate of 24.85¢ or the present interstate rate of 33.7¢ would be applicable for any predictable period of time if federal jurisdiction were to be determined exclusively by the receipt of gas from a point outside the state under the transitory facts of United's operations. The location of industry as well as the economical development of commercial and residential sales would be impossible in such circumstances. The teachings of the Supreme Court in the X-20 case are particularly applicable to this situation.[9] There the Court stated that "where Congressional authority is not explicit [assuming *arguendo* this is the case], we must ask whether state authority can practically regulate in a given area and, if we find that it cannot, then we are impelled to decide that federal authority governs." (365 U.S. 19-20) Similarly the Supreme Court has held:

> Congress, by Sections 7 (a) and (c) of the Act, has given primary authority to the Federal Power Commission to regulate extensions of gas transportation facilities and their physical connection with those of distributors, as well as the sale of gas to them. . . .[10]

We emphasize that this case involves the sole question whether these sales by United are subject to the jurisdiction of the Commission. It does not involve the appropriate rate level of these sales which constitutes an entirely different question currently before us in Docket No. RP63-1.

For these additional reasons, we believe our original decision was correct.

Accordingly, the Commission orders:

The applications for rehearing filed by United, Louisiana Gas Service Co., the Louisiana Public Service Commission, and by Hammond-Baton Rouge Brick Co., *et al.* are hereby denied.

Commissioners Woodward and O'Connor *dissenting.*

---

[8] United (apart from its physically separate intrastate operations) constitutes a fully integrated interstate pipeline transmission system. We appreciate that United's position here may be consistent with the 5 zone cost approach it advanced in its rate case Docket No. RP63-1. However, this Commission's extensive experience in considering various rate and certificate proceedings involving United compels a conclusion to the contrary. See the Examiner's decision in Docket No. RP63-1.

Legend
Gas and oil field
Gas or oil wells and gathering lines
SERRATED LINES INDICATE OWNERSHIP OR CONTROL BY INTERSTATE PIPELINE
SOLID LINE INDICATES OWNERSHIP BY OTHERS

EXPLANATION OF CHART

* * * * * * *

Commencing at the point marked "X", the inlet of the interstate trunk pipeline system, there is indicated by serrated lines a pipe-line system extending to points marked "Y". The system thus indicated consists of pipe lines, compressor stations, telephone lines and other facilities by which the gas entering the trunk pipe line at point X is transported to consuming markets. The Natural Gas Act of 1938 gave jurisdiction to the Federal Power Commission over operations between points X and Y; the Commission, however, has assumed jurisdiction of matters before X and beyond Y. This bill will again confine the jurisdiction of the Commission to operations between points X and Y. It is not intended by the bill to eliminate any of the Commission's jurisdiction over the transportation of gas from the point marked "X" to the points marked "Y" or the price received by the pipe-line company from sales to any of the distributing companies taking gas from such lines.

* * * * * * *

(80th Congress, 1st Session, House of Representatives, Report No. 800, pages 4–5)

Woodward, Commissioner and O'Connor, Commissioner, *dissenting:*

In this proceeding we are confronted with the sole question of the proper interpretation of Sections 1(b) and 2(7) of the Natural Gas Act.[1] While our dissenting statement to Opinion 401[2] is equally applicable here and need not be repeated, the instant denial of the applications for rehearing has so broadened the Congressional and judicially construed definition of "interstate commerce" that additional rebuttal is required. The majority, apart from its legal errors, has distorted the facts basing its conclusions of fact and law upon unsupported assumptions and conjectured rationale. Their original error has been compounded and we fail to note any justification for their findings in the Natural Gas Act or in prior decisions of this Commission or the courts.

The majority errs in declaring that the original decision in Opinion 401 has been "confirmed" by the recent *Colton* opinion;[3] such reliance is absolutely without warrant and fails to meet the issue. Although recognizing that the "precise factual situation [in Colton] differs from that presented here",[4] the majority avoids discussion of the significant distinction to which they allude. That "difference", we submit, strikes at the core of their argument and repudiates an erroneous conclusion. The Supreme Court's holding of jurisdiction was based on the finding that the Colton sale was in *interstate commerce.*[5] because some of the energy for the sale was generated *outside* the State where the *sale was made.* Here, no such basis exists for finding United's Lirette-Mobile sales to be in interstate commerce since those sales involve gas which is *produced, transported* and *sold* wholly within the State of Louisiana. In short, the *Colton* decision does not establish a new principle of law and certainly not one which is determinative of the instant proceeding.

The majority's cryptic discussion of legislative history can be disposed of summarily. The statements from the House Committee report, as well as those attributed to Mr. Harris and Mr. Rizley simply confirm that, upon completion of production and gathering, Commission jurisdiction was to attach to all interstate transmission facilities. They add no support to a finding that *intrastate* sales off those facilities were also to fall within our jurisdiction.

Although the Presiding Examiner in his Initial Decision has correctly recognized that this case involves two classes of sales, the majority persists in ignoring this controlling distinction creating the false impression that, generally, the Lirette-Mobile customers, at some time or other, do receive out-of-state gas as a result of some uncertain volume of back-flow or because offshore gas unexplainably enters United's line. There is an utter lack of compelling evidence in the record to establish that such gas does, in fact, reach those customers. The majority is forced to admit that most of the Florida Parish sales are exclusively of intrastate gas, although it attempts to obscure this fact by creating hypothetical possibilities unsupported by the record. Mere transportation of gas in an interstate facility does not impart to that gas, which is separated therefrom for consumption in the producing state, an unalterable interstate character.

---

[1] Section 1(b) of the Act provides:

> The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution or to the facilities used for such distribution or to the production or gathering of natural gas.

Section 2(7) of the Act provides:

> "Interstate Commerce" means commerce between any point in a State and any point outside thereof, or between points within the same State but through any place outside thereof, but only insofar as such commerce takes place within the United States.

[2] Opinion 401 and Order reversing in part and adopting in part initial decision of presiding examiner determining jurisdictional issues, issued August 26, 1963, 30 FPC 560.

[3] *Federal Power Commission* v. *Southern California Edison Company, et al.,* Nos. 71 and 73, decided March 2, 1964, 376 U.S. 205.

[4] *Supra,* p. 1153.

[5] Emphasis supplied throughout this statement unless otherwise indicated.

The record does establish that the Lirette-Mobile sales are intrastate because, as a practical matter, neither gas nor sales have any real connection with any State but the State of Louisiana. Employment of speculative possibility cannot be considered as sufficient ground for holding jurisdictional that which is essentially non-jurisdictional.

In *Federal Power Commission* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 502-503, the Supreme Court stated, ". . . suffice it to say that the Natural Gas Act did not envisage Federal regulation of the entire natural gas field to the limit of constitutional power. Rather it contemplates the exercise of Federal power as specified in the Act . . ." The explicit terms of the Act exclude the Lirette-Mobile sales from Commission jurisdiction and serves to further emphasize that the majority's finding is without adequate basis in law.

Rehearing should be granted and that portion of Opinion 401 and Order, issued August 26, 1963, 30 FPC 560, which asserts jurisdiction over sales by United from its Lirette-Mobile line should be reversed and set aside and the decision of the Presiding Examiner should be affirmed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED NATURAL GAS COMPANY, DOCKET NO. RP64-33

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued May 11, 1964)

United Natural Gas Company (United Natural), on April 6, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volume No. 1,[1] to become effective January 1, 1964. The revisions propose changes which would effect a reduction in United Natural's jurisdictional rates of approximately $49,693 annually, based upon sales for the twelve months' period ended December 31, 1963.

The proposed filing, which we have docketed as shown above, reflects a reduction in United Natural's cost of service based upon the recent reduction in the Federal income tax rate for corporations from 52 percent to 50 percent. In computing the reduction per Mcf, United Natural employed the cost of service underlying current rates as contained in the settlement agreement approved by the Commission in its last rate proceeding in Docket No. G-12493 *et al.*[2] The proposed rate filing is not intended to change, or otherwise affect

---

[1] Tenth Revised Sheet No. 4 and Eleventh Revised Sheet No. 5 to FPC Gas Tariff, Original Volume No. 1.

[2] Order issued June 13, 1962.

United Natural's existing obligations related to refunds and rate reductions under orders issued by the Commission in any proceedings involving the rates and charges of United Natural.

United Natural requests waiver of the requirements of the Commission's Rules and Regulations as may be necessary to permit the tendered tariff sheets to become effective as of January 1, 1964, as proposed.

The present and proposed reduced rates are as follows:

Rate schedule	Present	Proposed	Reduction
CD-1:			
Demand	$2.57	$2.57	----------
Commodity	37.7¢	37.54¢	0.16¢
G-1:			
Commodity	54.5¢	54.3¢	[1] 0.20¢

[1] The G-1 rate is equivalent to the CD-1 rate at 50 percent load factor.

No protests or objections to United Natural's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the 30-day notice and other requirements of Part 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

(2) The proposed revised tariff sheets and the rate reductions contained therein are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30-day notice requirement and other provisions of Part 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets described above are accepted for filing to become effective January 1, 1964, as proposed by United Natural's filing on April 6, 1964, subject to the terms and conditions of this order.

(B) This order shall not be construed as relieving United Natural from its existing obligations under the settlement agreement and Commission order in Docket No. G-12493, *et al.*, issued June 13, 1962, including obligations relating to future refunds and rate reductions, nor from any other outstanding obligations under Commission orders involving the rates and charges of United Natural.

(C) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, United Natural, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against United Natural or any other persons or parties affected by this order.

OPINION NO. 427

ST. MICHAELS UTILITIES COMMISSION AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7114

OPINION AND ORDER DETERMINING OVERCHARGES AND PROVIDING FOR REFUNDS

(Issued May 13, 1964)*

Syllabus

1. Under a narrow or broad interpretation of contract with Eastern Shore, St. Michaels would automatically be entitled to benefits of rate reductions to other customers without being compelled to accept other tariff conditions. P. 1163.
2. Failure to make available a contractually required rate reduction is just as much in violation of Federal Power Act as an attempt to impose an unauthorized rate increase. P. 1164.
3. Provisions of new contract appear to support finding that St. Michaels would experience some loss in contractual protection with respect to encroachment of service area, availability of supply, and rate stability. P. 1164.
4. Terms and conditions of any rate schedule are integral part of the wholesale transaction—decision here does not suggest that rate provisions can be isolated and considered apart from remainder of agreement between parties. P. 1164.
5. Commission *determines* overcharge and *provides* for *refunds* in proceeding arising under Section 205 of the Federal Power Act.

Spencer W. Reeder for St. Michaels, Maryland, St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland.

Albert L. Deen and *Wilson B. Stringer* for Public Service Commission of Maryland.

John W. T. Webb for The Eastern Shore Public Service Company of Maryland.

Wilbert L. Merriken and *William C. Wise* for Choptank Electric Cooperative, Inc.

Drexel D. Journey and *Sandra J. Strebel* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black

SWIDLER, *Chairman:*

In this electric rate proceeding under Section 205 of the Federal Power Act St. Michaels Utilities Commission, a municipal distributor, brought a complaint claiming that the Company, Eastern Shore Public Service Company of Maryland, had overcharged St. Michaels on deliveries of electricity occurring after May 1, 1963, under its wholesale contract. A separate count of the complaint charging unlawful discrimination by Eastern Shore in favor of Choptank Electric Cooperative was severed by the Commission on motion of St. Michaels on October 20, 1963. The Company questioned the Commission's jurisdiction but did not press the objection for purposes of this decision.

This opinion is limited to the sole issue whether Eastern Shore is obligated under its existing contract with St. Michaels to afford that city the benefit of rate reductions under new contracts with its other wholesale customers even though St. Michaels refuses to agree to the new contract because of the conditions attached thereto which it considers burdensome. The substantive question of the just and reasonable level of rates for all of Eastern Shore's wholesale customers and the issue of any possible discrimination among such customers remain for decision in the proceeding from which this contract issue was severed.

---

*Initial decision appears on P. 1165.

Eastern Shore is a subsidiary of Delaware Power and Light Company serving in Maryland. It has five wholesale customers—St. Michaels; Centreville Electric Plant; Chestertown Electric Light and Power Company; Stockton Electric Light and Power Company; and the Choptank Cooperative. St. Michaels serves approximately 600 customers in and around the City and in addition some 900 customers in surrounding rural areas including one wholesale client, the Choptank Co-op.

Until May 1, 1963, Eastern Shore's wholesale customers were served under similar but not identical individual wholesale contracts and rate schedules, the agreement with St. Michaels (Rate Schedule FPC No. 7) having been entered in 1960 for a 15-year term and accepted for filing by the Commission effective April 9, 1962. On May 16, 1963, a new electric rate tariff filed by Eastern Shore was accepted by the Commission for filing effective May 1st. The tariff included new rate provisions that were expected to result in a rate reduction of around 14 percent to St. Michaels[1], together with uniform terms and conditions that replaced the varying provisions of the existing individual wholesale contracts.

Two of the wholesale customers, Chestertown and Centreville, accepted the new tariff by executing new service agreements, but St. Michaels refused to do so, contending that under the terms of an automatic downward escalation clause in its existing contract it was entitled to the benefit of the reduced rates without accepting the new tariff terms and conditions. It objects to some of the new conditions which it contends would substantially reduce its current contract protection against service area encroachment and would impair the availability of electric power supply and rate stability.[2] St. Michaels, supported by the Commission's Staff, seeks here in reliance on its original contract the refund of overcharges collected by the Company since the effective date of the new tariff, with interest; the establishment of an accounting reserve to implement the refund requirement; and an order directing the company to cease and desist from charging St. Michaels the higher rates. In terms of our jurisdiction St. Michaels states a claim under § 205 of the Power Act by asserting that it is being charged rates in excess of those provided for in the applicable rate schedule and contract filed with the Federal Power Commission under Section 205.[3]

---

[1] The rate provisions of the new tariff include changes in the method of computing demand and energy charges, the billing demand and power factor, and the voltage and substation credits. The rate provision alone would not reduce St. Michaels' bill but St. Michaels would profit sufficiently from the fuel clause in the new schedule to experience an over-all rate reduction in excess of 14 percent in the test year.

[2] Stockton Electric Light and Power Company has asserted the same position as St. Michaels, but in the severed portion of the proceeding, not in the case before us here.

[3] The applicable provisions of the Federal Power Act are contained in subsections (c), (d) and (e) of Section 205, as follows:

> (c) Under such rules and regulations as the Commission may prescribe, every public utility shall file with the Commission, within such time and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection schedules showing all rates and charges for any transmission or sale subject to the jurisdiction of the Commission, and the classifications,

The Presiding Examiner sustained the St. Michaels contentions, and found that the existing wholesale contract entitled St. Michaels to receive automatically the advantage of any reduced charges resulting from any change in the resale service schedule to the other wholesale customers.

The pertinent contract provisions are as follows:

> ARTICLE V
>
> Section 1. Bills shall be computed in accordance with the COMPANY'S Resale Service Schedule attached hereto and made a part of this contract.
>
> Section 2. COMPANY agrees that if during the life of this agreement there are any changes made in its Resale Service Schedule which would reduce the charges to CUSTOMER, CUSTOMER shall automatically receive the advantage thereof; CUSTOMER agrees that if any changes are made in COMPANY'S Resale Service Schedule which would increase charges to CUSTOMER, CUSTOMER will pay such increased charges but shall have the right to cancel this contract upon giving the COMPANY six months' notice of its intention to do so.
>
> Section 3. The COMPANY retains the right during the life of this contract, subject to the provisions of Section 2 above and the approval of any Regulatory Authority which may have jurisdiction in the matter, to change the provisions of its Resale Service Schedule, including the right to increase or decrease the rates for service set forth therein.

It would seem to us that St. Michaels should prevail under either a narrow or a broad interpretation of the contract. If the contract is read narrowly, the references in Section 2 to the "Resale Service Schedule" mean the rate computation provisions of the contract exclusive of the non-rate conditions. Taking this approach it is clear that St. Michaels would automatically be entitled to the benefits of rate reductions to other customers without being compelled to accept other tariff conditions.

On a broader interpretation the references to the "Resale Service Schedule" could be taken to refer to the entire agreement, including non-rate provisions as well as the rate terms. On this view, too, we believe that St. Michaels is entitled to the rate reductions without accepting the other conditions demanded by the Company. Section 2 states that the customer shall receive the advantage of "any changes . . . which would reduce the *charges*," and makes no reference to changes of any other terms or conditions. It provides that the customer shall *automatically* benefit therefrom, attaching no strings or conditions.

---

practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services.

(d) Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to the Commission and to the public. Such notice shall be given by filing with the Commission and keeping open for public inspection new schedules stating plainly the change or changes to be made in the schedule or schedules then in force and the time when the change or changes will go into effect. The Commission, for good cause shown, may allow changes to take effect without requiring the thirty days' notice herein provided for by an order specifying the changes so to be made and the time when they shall take effect and the manner in which they shall be filed and published.

(e) Whenever any such new schedule is filed the Commission shall have authority, either upon complaint or upon its own initiative without complaint, at once, and, if it so orders, without answer or formal pleading by the public utility, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such rate, charge, classification or service . . . .

Whichever interpretation is followed, then, we find that St. Michaels is entitled to the benefit of the rate reduction without being required to accept the new tariff conditions.

The controlling legal principles here are set forth in the case of *Federal Power Commission* v. *Sierra Pacific Power Company*, 350 U.S. 348, 1956. In *Sierra* the court held the Federal Power Act by its terms does not permit a public utility regulated under Title II of the Act to impose unilateral contract changes on its wholesale customers without their consent simply by filing a new rate schedule with the Commission. There the company attempted to increase rates to its wholesale customer although its contract did not authorize any rate increase. Here Eastern Shore was obligated under its contract to reduce its rates. A failure to make available a contractually required rate reduction is just as much in violation of the Act as an attempt to impose an unauthorized rate increase.

The principle involved in this case is more than a matter of technical contract interpretation. Here Eastern Shore entered into a long-term contract with St. Michaels in 1960 which was filed with this Commission and the issue is whether St. Michaels is entitled to the benefit of that agreement without agreeing to a new contract which it considered burdensome. The terms and conditions which St. Michaels refused to accept would materially alter its existing contract. While we do not at this stage wish to indicate our views on the merits of the new contract, it is obvious from the following provisions that the changes are of great import to St. Michaels:

Protected territory: The old agreement prohibited sales by the Company to St. Michaels' customers within the town or its environs without St. Michaels' consent while the new agreement would allow service by either party to new customers which it could serve by constructing secondary lines not over 300 feet long.

Availability of service: Under the old agreement the Company agreed to supply St. Michaels' requirements without qualification, while under the new agreement it agreed to supply only requirements for retail sales and for St. Michaels' existing limited resale contracts.

Rate stability: The escalation clause of the old contract is set out above at page 1163. The new contract contains a Memphis-type clause (energy to be delivered under this schedule or "any effective superseding schedule"), and it omits the buyer's right to cancel following a rate increase upon 6 months' notice to Company.

Contract term: The old contract would expire in 1975 with automatic year-to-year renewals unless cancelled thereafter. The new contract would run for only five years before beginning the year-to-year renewals.

These provisions appear on their face to support a finding made by the Examiner that St. Michaels would experience some loss in contractual protection with respect to encroachment of service area, availability of supply, and rate stability.

The terms and conditions of any rate schedule are an integral part of the wholesale transaction, and our decision herein does not suggest that the rate provisions can be isolated and considered apart from the remainder of the agreement between the parties. We are only deciding that where a wholesale customer by the terms of his contract is entitled to benefit automatically from a rate reduction to other customers without reference to other contract changes, we should not deny him his contractual rights, at least without good cause being shown. The remaining issues in this same proceeding now underway will afford an opportunity to fix reasonable and nondiscriminatory rates on fair terms for all parties concerned.

We conclude, therefore, that St. Michaels is entitled by its contract to the advantage of the reduced charges provided by the new Eastern Shore tariff, and the Company has stated no grounds for denying St. Michaels its contract rights. St. Michaels is also entitled to a refund plus interest as ordered by the Examiner, covering the six months' period from the effective date of the new tariff to the date when the record before the Examiner was closed, October 30, 1963, and to a further refund covering the period subsequent to October 30, 1963.

The Commission orders:

(A) Eastern Shore is hereby directed to conform its FPC Electric Rate Schedule No. 7 for St. Michaels, filed with this Commission on March 29, 1962, to reflect the rates and charges as set forth in Eastern Shore's "Resale Service Schedule No. 1", filed with this Commission on April 18, 1963, as part of FPC Electric Tariff Original Volume No. 1, and to cease and desist immediately from charging, demanding or receiving from St. Michaels rates and charges other than those set forth in said Resale Service Schedule No. 1, unless and until such rates and charges are changed or cancelled in accordance with the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations under the said Act.

(B) Within 45 days from the date of issuance of this opinion Eastern Shore shall refund to St. Michaels the excess of the total amounts charged and collected since May 1, 1963, over and above the amounts which would have been charged for sales to St. Michaels under the rates prescribed by the aforesaid Resale Service Schedule No. 1, with interest at the rate of 6 percent per annum from the date of payment to Eastern Shore to the date of refund.

(C) Within 15 days of making the refunds required by paragraph (B) Eastern Shore shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with a copy of a release from St. Michaels.

(D) The Examiner's decision issued February 24, 1964 herein to the extent not inconsistent herewith is hereby adopted as part of this opinion and order.

(E) Exceptions not granted herein are hereby denied.

(F) Upon Eastern Shore's compliance with the decretal paragraphs herein, the overcharge phase of the hearing in Docket No. E-7114 shall be deemed terminated.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON COMPLAINT OF ALLEGED ILLEGAL OVERCHARGES UNDER SECTION 205 OF THE FEDERAL POWER ACT

(Issued February 24, 1964)

KANE, *Presiding Examiner:* This proceeding arises out of a formal complaint filed on July 12, 1963, by St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland (St. Michaels or Complainant) against the Eastern Shore Public Service Company of Maryland (Eastern Shore or Respondent) pursuant to Section 205 of the Federal Power Act. The complaint alleges *inter alia* that Eastern Shore has overcharged St. Michaels for deliveries of electrical energy after May 1, 1963, and has demanded and collected rates for such deliveries substantially in excess of the legal rates applicable to St. Michaels under Eastern Shore's Rate Schedule FPC No. 7, as supplemented. The alleged illegal overcharge is based upon the claim that Eastern Shore failed to give effect to a downward escalation clause contained in Article V, Section 2, of the Wholesale Power Contract portion of Eastern Shore's Rate

Schedule FPC No. 7, dated January 13, 1960. St. Michaels seeks correction of the alleged illegal rate and the immediate return of $9,095.22 together with interest thereon at the rate of 6 percent per annum.

The complaint in a separate count also alleges unlawful discrimination by Eastern Shore in favor of Choptank Electric Cooperative, Inc. (Choptank).

On October 11, 1963, Eastern Shore filed its answer to St. Michaels' complaint in substance denying any illegal overcharge to St. Michaels under Eastern Shore's Rate Schedule FPC No. 7. The answer also denies any unlawful discrimination. In addition Eastern Shore questions the Commission's jurisdiction over the matters alleged in the complaint. However, the Respondent does not press that question as an objective to be dealt with at this time reserving its right to present the matter at a future time. It is assumed for the purposes of this decision, however, that the Federal Power Commission has jurisdiction to regulate the transactions which are the subject of the complaint.

By motion dated September 17, 1963, St. Michaels moved to sever the unlawful discrimination issue from its complaint and to proceed immediately with the hearing and decision of the alleged illegal overcharge issue. By order issued October 20, 1963, the Commission granted the motion for severance of issues after the filing by Eastern Shore's answer to the motion stating that it had no objection to the prompt hearing and decision with respect to the illegal overcharge issue. The said order of the Commission set the matter down for hearing to be held on November 18, 1963.

Notice of intervention was filed on November 1, 1963, on behalf of the Public Service Commission of Maryland and a petition to intervene was filed on November 14, 1963, by Choptank Electric Cooperative, Inc. Choptank was permitted to participate in the hearing subject to the Commission's ruling on its petition. By order issued December 12, 1963, the Commission approved Choptank's intervention. The hearing commenced on November 18, 1963, as scheduled and was concluded the same day. The Public Service Commission of Maryland, although appearing at the hearing took no part therein and filed no brief. The case was fully submitted on December 23, 1963.

The phase of the hearing under consideration at this time presents very limited questions all of which are directed to the proper interpretation and application of the Wholesale Power Contract portion of Eastern Shore's Rate Schedule FPC No. 7. They may be summarized as follows:

1. Is St. Michaels entitled to the advantage of the reduced rates and charges contained in Eastern Shore's Electric Tariff filed as a rate schedule pursuant to Section 205 of the Federal Power Act by reason of the effect of Article V, Section 2, of Eastern Shore's Rate Schedule FPC No. 7, as supplemented?

2. In the event that the first issue be answered in the affirmative, should Eastern Shore be directed to cease and desist from charging, demanding or collecting from St. Michaels rates and charges other than the Respondent's legal rate as so determined?

3. In the event that the first issue be answered in the affirmative should Eastern Shore be required to establish an appropriate accounting reserve evidencing its obligation to St. Michaels to return all amounts collected from the town on and after May 1, 1963, in excess of Eastern Shore's legal rate together with interest thereon at 6 percent per annum?

While there is substantial disagreement as to the effects of the facts underlying the transactions involved herein, there is no substantial disagreement as to such facts.

Eastern Shore, the Respondent in this proceeding is a subsidiary of Delaware Power and Light Company, and is engaged in the generation, transmission, and distribution of electric energy in the State of Maryland. The Complainant, St. Michaels, operates a municipal electric distribution system on the Eastern Shore of Maryland serving the town of St. Michaels and the surrounding area. It also serves approximately 600 customers within its environs, and serves approximately 900 customers in surrounding rural areas of Calvert County, including three small villages, Claiborne, Newcomb and Royal Oak, Maryland. In addition, it serves 150 farms and numerous waterside residences and provides wholesale electric service to Choptank.

St. Michaels' total electric requirements are purchased from Eastern Shore at 12.5 kv under the latter's Rate Schedule FPC No. 7 and supplement Nos. 1 and 2, consisting of a Wholesale Power Contract dated January 13, 1960, as well as certain supplements thereto including a Supplemental Agreement dated November 8, 1960. The contract provides for the sale of electric energy to St. Michaels for resale by the latter in the town of St. Michaels and its environs. The contract and supplements were filed with the Commission by Eastern Shore as a rate schedule and were accepted for filing by the Commission effective April 9, 1962, as evidenced by a letter from the Commission dated May 7, 1962. The Supplemental Agreement dated November 8, 1960, revised Eastern Shore's fuel adjustment resulting in a reduction of its monthly fuel charge to St. Michaels in accordance with the provisions of Article V, Section 2, of the Wholesale Power Contract set out, *infra*.

By letter dated April 17, 1963, Eastern Shore filed with the Commission its FPC Electric Tariff Original Volume No. 1, consisting of a table of contents, preliminary statement, map of system, index of buyers, Resale Service Schedule No. 1, rider, general terms and conditions and form of service agreement.

At the time of the filing of the Tariff, Eastern Shore was serving four resale customers, Chestertown Electric Light and Power Company (Chestertown), Centreville Electric Plant (Centreville), Stockton Electric Light and Power Company (Stockton), and St. Michaels, each of which was eligible for service under the proposed tariff. At that time the four customers were being served under individual contracts each of which was an effective rate schedule on file with the Commission and each of which contained similar automatic reduction clauses. The tariff accepted by the Commission for filing on May 16, 1963, was made effective as of May 1, 1963, upon the Commission's waiving of the 30 day notice requirement. Centreville and Chestertown on May 22, 1963 and on May 31, 1963, respectively, each executed a new service agreement in the form provided in the accepted tariff which included the reduced rates and charges reflected in Resale Service Schedule No. 1. Eastern Shore also tendered the same reduced rates and charges reflected in Resale Service Schedule No. 1 to St. Michaels and the fourth company, Stockton, but, as in the case of the other two customers, only on the conditions set forth in the Tariff. St. Michaels advised the Respondent that it refused to execute the new service agreement and demanded the advantage of the reduced resale service schedule rates under FPC Electric Rate Schedule No. 7, the reduction to be effective on all wholesale power delivered to St. Michaels by Eastern Shore on and after May 1, 1963. This demand was refused by the Respondent and St. Michaels filed its complaint herein on July 12, 1963, seeking among other things the return of the payments of the alleged illegal overcharges.

During the period from May 1, 1963, through October 31, 1963, St. Michaels was charged the same rate previously applicable to it under the rate provisions of Eastern Shore's Rate Schedule FPC No. 7. Admittedly, this has resulted in the collection by Eastern Shore of $9,095.22 more from St. Michaels than it would have collected had St. Michaels been charged the reduced rates and charges contained under the 1963 filed tariff.

It is the Complainant's contention that the Respondent's Resale Service Schedule No. 1 containing reduced charges which had become effective upon the filing of the tariff with the Commission and the execution of new contracts with Chestertown and Centreville, two of the Respondent's resale service customers, constituted compliance with the single condition upon which St. Michaels' right to automatic rate reduction hinged; and that St. Michaels was automatically entitled to the advantage of the reduction in rates in the Respondent's Resale Service Schedule which had become effective May 1, 1963, for two of the Respondent's resale customers. Furthermore, the Complainant contends such automatic entitlement could not be conditioned upon the execution of any new service agreement since it was unconditionally entitled to the reduced rates under FPC Electric Rate Schedule No. 7.

The Staff, in effect, supports the Complainant's position. Thus, the Staff takes the position that Eastern Shore's Rate Schedule FPC No. 7, as supplemented, constitutes Eastern Shore's legal rate to St. Michaels and that the said schedule, by virtue of the effect of the provisions of Article V, Section 2, of the Wholesale Power Contract, guaranteeing the customers the benefits of any downward rate adjustments in Eastern Shore's resale rates, provides for the lower rates and charges which St. Michaels seeks. Furthermore, Staff asserts, Eastern Shore's refusal to file its Resale Service Schedule No. 1 as a part of Eastern Shore's Rate Schedule FPC No. 7, as supplemented, constituted a clear violation of the latter schedule since Eastern Shore's action of April 17, 1963, in filing its Resale Service Schedule No. 1 triggered its obligation to file the later schedule as a part of the earlier one, to wit, FPC No. 7. Therefore, Staff concludes, the rates as stated in Resale Service Schedule No. 1 are Eastern Shore's legal rates to St. Michaels on and after May 1, 1963, regardless of Eastern Shore's omission in completing a proper rate schedule filing. Accordingly, Staff concludes, St. Michaels has been and continues to be overcharged by Eastern Shore in the amount stipulated.

Eastern Shore takes the position that the tariff filed by it constitutes nothing more than its offer to provide service under a uniform tariff to all of its existing customers and that such offer is conditioned upon the agreement of such customers to be bound by all the tariff's terms and that until such time as a given customer agrees to the tariff's terms by executing a service agreement in the form required by the tariff, the tariff cannot, as a matter of law, be made applicable to such customer as an effective rate schedule. It concludes that to make the tariff rate schedule effective in the absence of the mutual consent of Eastern Shore and any of its customers to be contractually bound by the tariff's terms would, in effect, amount not only to an invalid obligation of the existing filed contract between Eastern Shore and the non-assenting customer in effect at the time of the filing of the tariff, but also would result in unduly preferential service to such customer over the consenting customers, Chestertown and Centreville, who have agreed to the terms of the tariff and have executed the required new service agreements.

Before considering the merits of St. Michaels' complaint, it is necessary to dispose of its contention that the Respondent has the burden of proof in this proceeding.

The Complainant citing as authority the case of *United States* v. *Kansas Gas and Electric Company*, 215 F. Supp. 532, contends that the Respondent having drafted the 1960 contract and filed it with the Commission as its

Electric Rate Schedule FPC No. 7, has the burden of proving that the reduced charges to Chestertown and Centreville resulting from the changes in its Resale Service Schedule No. 1 should not automatically be made available to St. Michaels by reason of Section 2 of Article V of the 1960 agreement, and that it has failed to sustain such burden. The cited case does not stand for any such proposition. Since it is generally accepted that the burden of alleging and proving facts upon which the Complainant's remedial right depends rests upon such Complainant, this Examiner can find no basis for the claim that the burden of proof shifted to the Respondent in this action. Consequently, he rejects that portion of Complainant's contention which is based on the Respondent's alleged failure to sustain the burden of proof. (See Order of the Commission *Carolina Pipeline Company* v. *Southern Natural Gas Co.*, 29 FPC 149.) The decision herein is rather directed to the basic issue of contract interpretation involving the provisions of Eastern Shore's Rate Schedule FPC No. 7, particularly the provisions of Article V, Section 2, of the Wholesale Power Agreement and the effect upon St. Michaels' rates of the reduction in rates and charges to Chestertown and Centreville under Eastern Shore's FPC Electric Tariff Original Volume No. 1.

The resolution of the main issue herein in essence involves a rate schedule interpretation, a matter, while primarily legal in nature, necessarily rests upon the basic jurisdiction of the regulatory agency with whom it is filed.

The Commission has not prescribed any special format of rate schedule under the Federal Power Act such as the Tariff Service Agreement form prescribed under the Natural Gas Act for the use of natural gas pipelines. (Sections 154.21-.41 of the Commission's Regulations Under the Natural Gas Act). The Power Act, however, expressly recognizes that rates to particular customers may be set by individual contracts by requiring such contracts to be filed. Section 205(c). Thus public utilities may employ the language of wholesale power contracts in preparing their rate schedules.

In accordance with such statute and the Rules and Regulations of the Commission, the Wholesale Power Contract involved herein was filed as part of Eastern Shore's Rate Schedule FPC No. 7. The contractual obligations between Eastern Shore and St. Michaels were accordingly embodied in that rate schedule, *Public Service Company of Oklahoma*, 25 FPC 656, 657, which also included Eastern Shore's filed rates and charges to St. Michaels under Eastern Shore's Resale Service Schedule attached to and made a part of the Wholesale Power Contract. Eastern Shore has undertaken (contractually and as a term of its rate schedule) to supply the electric power and energy needs of St. Michaels under Eastern Shore's Resale Service Schedule as it existed not only at the time of Eastern Shore's January 13, 1960, contract and its filing as a rate schedule pursuant to Section 205 of the Federal Power Act, but also as that schedule may be changed from time to time. The interpretation of the contractual documents, therefore, cannot be made except against the backdrop of the rate schedule's terms and conditions. Whatever obligation Eastern Shore has undertaken with respect to the rates and charges to St. Michaels must be measured by the terms of that contract, the pertinent provisions of which are as follows:

ARTICLE V

> Section 1. Bills shall be computed in accordance with the COMPANY'S Resale Service Schedule attached hereto and made a part of this contract.
>
> Section 2. COMPANY agrees that if during the life of this agreement there are any changes made in its Resale Service Schedule which would

> reduce the charges to CUSTOMER, CUSTOMER shall automatically receive the advantage thereof; CUSTOMER agrees that if any changes are made in COMPANY'S Resale Service Schedule which would increase charges to CUSTOMER, CUSTOMER will pay such increased charges but shall have the right to cancel this contract upon giving the COMPANY six months' notice of its intention to do so.
>
> Section 3. The COMPANY retains the right during the life of this contract, subject to the provisions of Section 2 above and the approval of any Regulatory Authority which may have jurisdiction in the matter, to change the provisions of its Resale Service Schedule, including the right to increase or decrease the rates for service set forth therein.

There appears to be no ambiguity in Article V, Section 2, of the Wholesale Power Contract. Its clear meaning reveals the intent of the parties without resort to parole evidence. The clear and unambiguous language permits of only one conclusion, to wit, Eastern Shore agreed to grant St. Michaels the advantage of any downward revision of charges resulting from changes in the Resale Service Schedule. The contract, thus, had built into it an automatic downward revision device in the event that changes in the resale service schedule resulted in reduced charges. In the final analysis, Eastern Shore had thereby obligated itself, as a term of FPC Electric Rate Schedule No. 7, to pass on automatically to St. Michaels the benefits of rate reductions made under any changes of the resale service schedule.

Notwithstanding this automatic triggering device and the fact that its resale service schedule is a class rate which is incorporated within Electric Rate Schedule FPC No. 7, as supplemented, Eastern Shore tendered the reduced rates and charges reflected in Resale Service Schedule No. 1, a part of the electric tariff, to St. Michaels but only upon acceptance of all the conditions set forth in the tariff. However, nothing expressly or impliedly made the downward revision contingent upon execution of a new agreement or acceptance of any other conditions. Had the parties intended that execution of a new agreement would be necessary to effectuate such changes it would have been simple so to state rather than by using the terms "customer shall automatically receive the advantage thereof." Eastern Shore may not now read into the contract terms conditioning the automatic revision upon acceptance of all the provisions of the new contract as embodied in the Resale Service Schedule No. 1 or the general terms and conditions of the new tariff. *Cf. Mississippi River Fuel Corporation* v. *Federal Power Commission*, 281 F. 2d 919, 925.) There is no basis for reading any such condition into the contract. (*Cf. Cities Service Gas Producing Company* v. *Federal Power Commission*, 233 F. 2d 726, 729; cert. denied 352 U.S. 911.)

The language which it contains is clearly broad enough to encompass the very transactions which it is claimed triggered the downward revision clause. Any other interpretation would do violence to the language of an agreement which simply provides for automatic advantage of reduced charges in the event there was any change in the Resale Service Schedule which resulted in reduced charges.

The Respondent claims, however, that the previous conduct of the parties in connection with the execution of the Supplementary Agreement of November 8, 1960, resulting in the reduction of the fuel adjustment charge, reflects the intent of the parties to the effect that a new agreement was required before the Complainant would be entitled to any reduction of charges. Suffice it to say, however; a case of consistent prior practice has not been made out if indeed such practice could be deemed a relevant consideration. Furthermore, the fuel adjustment Supplemental Agreement of November 8, 1960, would be deemed to be simply executory of, and represented action taken under, the pre-existing contract between the parties. *Cf. Texas Gas Transmission Corp. v. Shell Oil Co.*, 363 U.S. 263, 272.

As has been determined above, the proper interpretation of the terms of Rate Schedule FPC No. 7, as supplemented, as well as the contractual undertaking contained in Article V, Section 2, of the Wholesale Power Contract, compels the conclusion that Eastern Shore had obligated itself to pass on automatically to St. Michaels the benefits of all rate reductions resulting from any change in the Resale Service Schedule. The requisite change in the Resale Service Schedule triggering such obligation was occasioned by the filing of Resale Service Schedule No. 1, with its reduced charges, as part of Eastern Shore's Electric Tariff on April 17, 1963.

The record discloses that (1) Chestertown, Centreville and St. Michaels, the customers considered in these proceedings, are apparently all in the same class, to wit, resale customers and the same kind of service under substantially similar conditions is rendered to each of them; (2) there is an absence of any showing that there is any substantial difference in the cost of service or operating conditions existing which would justify the differences now existing in rates charged Centreville and Chestertown, the customers accepting the tariff, under Resale Service Schedule No. 1 and those charged St. Michaels under the earlier Resale Service Schedule; (3) the Respondent has voluntarily made available to Chestertown and Centreville the rate currently charged them; (4) although St. Michaels is a resale customer within the same classification as Centreville and Chestertown and under its contract with Eastern Shore is automatically entitled to the lower rate, the Respondent has failed to make such lower rate available to St. Michaels although it has offered to make the lower rates available, but only under conditions not warranted by the subsisting contract between them.

The Resale Service Schedules involved (both the earlier one and No. 1) serve the same purposes, to wit, the stating of Eastern Shore's wholesale rates and charges to a class of resale customers. The changes in the tariff, accepted by Chestertown and Centreville, in no way changed their electric operations for purposes of classification as resale customers. They remain, as before, substantially all requirement customers in the same classification as St. Michaels. There is no indication that they suffered any substantial variation in the service conditions or in the characteristics of the delivery and sale of the electric energy. Furthermore, there is no evidence in the record to refute Eastern Shore's clear obligation to afford all purchasers equality of rate treatment on a class basis and to pass on automatically any reduction in charges to its resale purchasers.

The testimony regarding any substantial differences in service to be incurred by St. Michaels under the electric tariff as opposed to Rate Schedule FPC No. 7 was at best meager. Counsel for the complainant attempted to fill the void by argument but the General Manager who testified on behalf of St. Michaels failed to translate the apparent differences in the language of the two service agreements into every day operating consequences as respect St. Michaels' day to day utility operations. However, an examination of the two documents, which speak for themselves, clearly reveals certain significant differences. St. Michaels would, under the electric tariff, undoubtedly experience some loss in the amount of contractual protection which it now enjoys against encroachment of its service, territory, availability of supply, and rate stability. However, the Examiner does not consider resolution of this issue necessary, since in the final analysis however substantial the alleged differences were deemed to be, and St. Michaels apparently did consider them to be substantial, St. Michaels, in any event, was not contractually obligated to accept any new conditions or contract, but was entitled to rely upon the unconditional automatic advantage clause contained in its contract with Eastern Shore.

However denominated in practical operation, the schedule of charges and rates in Resale Service Schedule No. 1 effected a reduction of the charges paid, and to be paid, by Chestertown and Centreville for a given quantity of electrical energy within a given period. St. Michaels is entitled to the same advantages pursuant to the provisions of Section 2, Article V, of the Wholesale Power Contract. That contract between the parties is controlling and cannot be unilaterally changed by the action of one of the parties. See *United Gas Pipe Line Company* v. *Mobile Gas Service Corporation*, 350 U.S. 332, *F.P.C.* v. *Sierra Pacific Power Company*, 350 U.S. 348. Consequently, the reduced rates contained in Resale Service Schedule No. 1 are the legal rates of Eastern Shore after May 1, 1963, notwithstanding its omission to complete a proper rate schedule filing. See *City of Colton* v. *Southern California Edison Company*, 26 FPC 223, 232.

In view of the conclusion arrived at herein, to wit, that from May 1, 1963, through October 31, 1963, St. Michaels was entitled to the lower rates and charges contained in Resale Service Schedule No. 1, it did, in fact, pay rates in excess of those provided in its rate schedule. Accordingly, Respondent, Eastern Shore, received and had the use of the overpayments admittedly amounting to $9,095.22. The situation is little different from what it would be if the Commission after a Section 205 investigation had determined that the rates then in effect were too high and ordered refunds. The Federal Power Act in that situation clearly allows a refund with interest. Accordingly, it is held herein that an interest payment of 6 percent per annum is allowed. *Cf. Mississippi River Fuel Corp.* v. *Federal Power Commission*, 281 F. 2d 919, 927.

ADDITIONAL FINDINGS AND CONCLUSIONS

The following findings and conclusions, made upon consideration of the record made in these proceedings, are deemed to be supplementary and in addition to those hereinabove stated:

(1) Eastern Shore's Rate Schedule FPC No. 7, as supplemented, on file with this Commission and effective on and after April 9, 1962, provides for wholesale electric service by that company to the town of St. Michaels at the rates and charges contained in Eastern Shore's Resale Service Schedule.

(2) The provisions of Article V, Section 2, of the Wholesale Power Contract, a part of FPC Rate Schedule No. 7, provide for the automatic advantage to St. Michaels of any reduced charges resulting from a change in the Resale Service Schedule.

(3) Effective May 1, 1963, St. Michaels is entitled to the advantage of the reduced charges set forth in Eastern Shore's "Resale Service Schedule No. 1" filed with this Commission on April 18, 1963, as a part of its FPC Electric Tariff Original Volume No. 1.

(4) Eastern Shore by reason of its rate and billing practices has charged, and collected from, St. Michaels for the period from May 1, 1963, through October 31, 1963, the sum of $9,095.22 in excess of the just and reasonable rates.

(5) St. Michaels is entitled to a refund from Eastern Shore because of such excess charges in the amount of $9,095.22 with interest thereon at the rate of 6 percent per annum.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission on appeal or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Eastern Shore is hereby directed to cease and desist immediately from charging, demanding or receiving from St. Michaels rates and charges other than those set forth in Eastern Shore's "Resale Service Schedule No. 1", filed with this Commission on April 18, 1963, as part of FPC Electric Tariff Original Volume No. 1, unless and until such rates and charges are changed or cancelled in accordance with the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations under the said Act.

(B) Eastern Shore shall account for all monies collected from St. Michaels on and after May 1, 1963, which are in excess of Eastern Shore's legal rate referred to in Finding (3) above.

(C) Eastern Shore shall establish, within thirty days of the issuance of this order, a special reserve account in an amount equal to the difference between the amount collected from St. Michaels on and after May 1, 1963, and the amount which would have been collected under the rates and charges referred to in Finding (3) above, totalling $9,095.22 for the period May 1, 1963, through October 31, 1963, with interest at the rate of 6 percent per annum from the dates on which the excess amounts were collected until the date of compliance with paragraphs (B) and (C) hereof.

(D) Within 60 days after the issuance of this order, Eastern Shore shall submit to the Commission certified accounting entries reflecting the establishment of the special reserve account referred to in paragraph (C) hereof, together with a proposed plan for the prompt disposition of the amount in the said account to St. Michaels.

(E) Upon Eastern Shore's compliance with the decretal paragraphs herein, the overcharge phase of the hearing in Docket No. E-7114 shall be deemed terminated.

MAX L. KANE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. RP64-31

ORDER CONDITIONALLY PERMITTING REVISED TARIFF SHEETS TO BECOME EFFECTIVE AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued May 14, 1964)

Southern Natural Gas Company (Southern), on April 1, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Sixth Revised Volume No. 1.[1] The proposed change in rates would make effective as of April 1, 1964, a reduction in Southern's jurisdictional rates in the sum of approximately

---

[1] Fourth Revised Sheets Nos. 11C, 29A, and 30; Fifth Revised Sheets Nos. 5, 9, 12, 16, 23 and 27.

$1,500,000 annually, based upon operations for the twelve months ended October 31, 1963, adjusted to reflect its operations with additional facilities authorized in our Opinion No. 424 in Docket No. CP63-26. The filing of the proposed rates, which we have docketed as shown above, also includes a proposal to make further rate reductions subject to certain terms and contingencies summarized in part below.

Southern's rate reduction proposal has resulted from conferences with the Commission staff. The conferences were initiated by letter of the Executive Director on September 27, 1963, as a consequence of the staff's continuing supervision and periodic review of the reports filed with the Commission by natural gas companies.

The proposal is summarized in part as follows:

(1) Effective as of April 1, 1964, Southern's jurisdictional rates shall be reduced to the levels set forth in Appendix A hereto; and effective on January 1, 1965, Southern shall file further rate reductions to reflect the reductions set forth in Appendix A hereto.

(2) Southern's proposed reduced rates to become effective as of April 1, 1964, give effect to the reduction in the Federal corporate income tax rate from 52 percent to 50 percent which became effective January 1, 1964, and also give effect to the rate treatment of liberalized depreciation and related accumulated deferred income taxes, as provided in the Commission's Opinion No. 417, *Alabama-Tennessee Natural Gas Co.*, Docket No. G-5471, *et al.*, 31 FPC 208 with respect to plant additions placed in service prior to January 1, 1963, on which liberalized depreciation tax deductions have heretofore been taken. Southern will continue to take liberalized depreciation deductions with respect to such plant additions, and pursuant to Account 282, Subparagraph D, of the Commission's Uniform System of Accounts, requests that it be permitted to discontinue, effective January 1, 1964, its deferred tax accounting with respect to such plant additions. Southern has elected to use, for tax purposes, straight line tax depreciation, effective January 1, 1964, for plant additions placed in service on and after January 1, 1963.

(3) The proposed rate reductions of approximately $500,000 annually, to become effective on January 1, 1965, give effect to the reduction in the Federal corporate income tax rate from 50 percent to 48 percent. Such reductions are set forth in Appendix A hereto.

(4) Southern shall be relieved of all obligations relating to: the recently enacted reductions in the Federal income tax rates; the condition contained in Ordering Paragraph (D) of Opinion No. 379, *Southern Natural Gas Company*, 29 FPC 323, relating to the treatment of liberalized depreciation and accumulated deferred taxes; the Commission's policies with respect to such treatment in Opinion No. 417, *supra;* and the informal investigation of Southern's rates initiated on September 27, 1963, referred to above.

(5) Southern shall continue to be obligated to pass on gas supplier refunds applicable to the period April 16, 1958 through October 31, 1959, pursuant to order of the Commission issued April 18, 1958, in Docket No. G-13258, and refunds applicable to the period June 1, 1960, through March 31, 1964, pursuant to Opinion No. 379.[2]

(6) Southern shall be obligated to pass on to its customers gas supplier refunds applicable to the period commencing April 1, 1964, and during the term of this rate agreement with respect to the pending gas supplier proceedings listed in Appendix B hereto (and any such proceeding inadvertently

---

[2] Southern's obligation to make refunds, if any, applicable to the period November 1, 1959, through May 31, 1960, remains subject to the Commission's order in Docket No. G-18512, now pending before the Commission upon Southern's Motion to Terminate.

omitted therefrom). Southern shall flow-through to its jurisdictional customers the proportionate parts of any such refunds (including interest thereon received by Southern) as more specifically provided in the agreement.

(7) Southern shall reduce its rates to reflect reductions in the rates of its gas suppliers with respect to the period commencing April 1, 1964, and continuing during the term of this agreement, with respect to the proceedings listed in Appendix B hereto, to the extent that such reductions result in an average cost of purchased gas less than 20.81 cents per Mcf based upon an actual 12-months' weighted average basis.

(8) Since the gas supplier rates reflected in Southern's rates proposed herein include the rates reduced by the following Commission orders in the proceedings in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, Southern shall be relieved of any further obligation to reflect such supplier rate reductions:

Producers	Docket Nos.	Orders issued
Gulf Oil Corp. and Socony Mobil Oil Co., Inc.	G-19062, *et al.*	Oct. 9, 1963
Cabot Corp.	CI60-414, *et al.*	Oct. 25, 1963
Sinclair Oil & Gas Co.	G-17917, *et al.*	Oct. 28, 1963
Union Producing Co.	CI60-414, *et al.*	Oct. 29, 1963
Perry R. Bass (Operator), *et al.*	CI61-406, *et al.*	Jan. 7, 1964

(9) Southern shall tender for filing new rate schedules providing for Optional CD and CDL services under which Billing Demand will be equal to Contract Demand.

(10) Southern's proposal also provides that it is submitted without prejudice and without agreement as to principles and methods; that it shall terminate on the effective date of either a change in rates filed by Southern or ordered by the Commission as a result of any future investigation of Southern's rates. Southern requests that the Commission waive compliance with the requirements of the General Rules and Regulations, particularly Part 154 thereof, to the extent necessary to permit the proposed changes to become effective as of April 1, 1964.

Southern, on March 30, 1964, served copies of the proposed tariff revisions and agreement, and on April 20, 1964, served copies of the related cost-of-service study upon all customers and interested State commissions. Notice of the tariff filing and rate reductions was published in the Federal Register on April 8, 1963, with the request that comments on the filing be submitted by April 24, 1964.

Southern's filing states that its cost of service reflects the Commission's decision in Opinion No. 417, *Alabama-Tennessee Natural Gas Company*, issued February 3, 1964, requiring tax savings on liberalized depreciation deductions to be flowed through to customers and the rate base reduced by the amount of the balances of accumulated deferred taxes in Account 282. The amount of the rate base reduction is $8,254,000. Likewise, the cost of service reflects the recently reduced Federal corporate income tax rate, 50 percent, and Southern's agreement provides for the reduction, effective January 1, 1965, to reflect the further reduction in that tax rate to 48 percent. The cost of service for jurisdictional sales is $1,411,768 less than revenues, and Southern's proposed reduction is approximately $1,500,000 annually. The costs included are those based upon operations for the twelve months' period ended October 31, 1963, as adjusted to reflect changes in operations with the facilities approved in Opinion No. 424, and are consistent with the principles of Opinion No. 379, issued February 18, 1963, 29 FPC 323.

Carolina Pipeline Company (Carolina), a customer purchasing gas under Southern's Rate Schedules CDL-3 and AOL-3, filed its comments in a letter dated April 8, 1964. Carolina requested information and data relating to Southern's cost of service underlying the proposed rates and the manner in which the rates were designed. It also asserts that no justification has been shown by Southern for making the rates effective on April 1, 1964, rather than upon January 1, 1964, as had been done by some other companies. Further, Carolina comments upon the fact that no reduction in the AOL-3 Rate Schedule is proposed, and contends that this is an undue discrimination against Carolina and other high load factor customers since Carolina would be required under the proposal to "pay more in the aggregate" than would be paid by the low load factor customers. It, therefore, objects to any action which would permit the filing to become effective.

On April 29, 1964, Carolina Pipeline Company filed a letter commenting further upon Southern's proposed rate reduction, particularly concerning the cost information provided by Southern, accompanying its letter of April 20, 1964. Carolina's letter requests that it be afforded an opportunity to examine the underlying cost-of-service data and schedules which may have been supplied to the Commission staff, or at least that it be provided with Statements L, M, and N which are required to be filed in support of proposed rate *de*creases by Section 154.63(b)(4) of Commission Regulations under the Natural Gas Act.

On this point we believe Carolina's comment to be well taken, and we shall require Southern to file with the Commission, and serve on all its customers and interested State commissions, the studies required in Statements L, M, and N of Part 154 of the Regulations. Due consideration and appropriate prospective action will be taken by the Commission if warranted by any comments filed with respect to such studies. To the extent that Southern's filing requested waiver of the requirements of Part 154 of the Regulations other than the 30-day notice requirements, it should be denied.

We do not believe that Southern's failure to serve the studies referred to above on its customers and interested State commissions should be allowed to delay making Southern's rate reduction effective as of the April 1, 1964 date specified in the filing until we can consider any possible further objections Carolina or other parties may wish to raise. The proposal before us, in our opinion, clearly places all of Southern's customers in a better position than they are under Southern's existing rates and should become effective as of the date specified in the filing, as soon as possible. Contrary to Carolina's suggestion, we would not have the authority, were we to reject the filing or indefinitely postpone its effectiveness, to subsequently order that any rate reduction be made effective as of January 1, 1964.

Carolina's assertion that the failure to reflect any reduction in the AOL-3 rate schedule constitutes undue discrimination in favor of low load factor customers, is without merit. Its statement that Carolina would be required to "pay more in the aggregate" than it would be paid by low load factor customers runs counter to the Commission's finding in Opinion No. 423 (31 FPC 705 at 707) that—

> The average cost to Carolina of both firm and interruptible gas purchased from Southern in 1962 was some *four cents less* than the next lowest cost of any of Southern's major resale customers in any zone. [Emphasis added.]

Obviously, these are high load factor customers, and low load factor customers had even higher average costs.

In our Opinion No. 379, *Southern Natural Gas Company*, issued February 18, 1963, 23 FPC 323, 353, in order to set commodity charges for industrial sales "at the maximum which Southern can charge and still retain its interruptible loads", we prescribed CD (demand-commodity) rates containing two separate blocks for commodity charges. We prescribed the two blocks in order to provide higher charges in Block 1 for those customers purchasing at lower load factors. We observed that . . . "the second block applies primarily to gas sold for industrial use." In Zone 3, in which Carolina purchases gas, the Block 2 charge was set at the currently charged commodity level, 23.67 cents per Mcf. Subsequently, we authorized Southern to sell gas to Carolina under Rate Schedule CDL-3 (Limited Service) and AOL-3 (Authorized Overrun Service). The Block 2 commodity level of CDL-3 and the single commodity charge of AOL-3 are identical with the Block 2 charge of CD-3, *i.e.*, 23.67 cents per Mcf.

Southern's proposal reflects the $1.5 million reduction in jurisdictional cost of service by first reducing the G rates by the overall percentage reduction of 1.3 percent. The remainder of the reduction was then applied to the *first* block commodity charges in all of the CD and CDL rates. The AOL rates, about which Carolina complains, reflects only the *second* block commodity charges of the CD rates, and, therefore, were *not* reduced. The reduction applied to the first block commodity charge was 3.77 percent, based upon the average reduction of the first block commodity revenues. (Appendix A hereto)

The principal reason for *not* reducing the Block 2 and AOL rate levels, therefore, is that they were set by us at those levels to meet competitive fuel prices. We know of no justification for lowering these levels further to meet competition, and Carolina makes no allegation that such justification exists. On the contrary, it would appear from findings in Opinion No. 423, issued March 30, 1964 in Docket No. RP63-4, that Carolina has had no difficulty selling gas to industry on the basis of paying Southern 23.67 cents per Mcf for over-run gas. In that proceeding, Carolina's complaint was that it desires to purchase gas under the CD-3 rate schedule (which contains the Block 2, 23.67 cents per Mcf, rate level for over-run gas) in order to sell *more* over-run gas to industrial consumers during winter periods.

Moreover, as shown in Southern's proposal (Art. VI, p. 9), its cost of purchased gas has risen to 20.81 cents from the 20.28 cents per Mcf reflected in existing rates. In view of that fact, and of the fact that the Block 2 and AOL rate levels remain unchanged in Southern's proposal, the 23.67 cents per Mcf paid by Carolina now contributes 0.53 cents *less* to transmission and other costs than it does under existing rates. Under the above circumstances, it is obvious that confining this reduction in rates to the Block 1 commodity charges is appropriate.

Carolina also complains that Southern discriminates against it in denying Carolina service under Rate Schedule CD-3, alleging that it unjustly receives inferior service. We have recently given full consideration in Carolina's complaint in this regard in Opinion No. 423, issued March 30, 1964. Further consideration to that issue need not be given here.

One further comment needs to be made with respect to Southern's request, pursuant to Account 282 of the Commission's Uniform System of Accounts that we grant permission to discontinue its deferred tax accounting with respect to plant additions made prior to January 1, 1963. In Opinion No. 417, with which Southern offers to comply, we discussed the various alternatives for dealing with the accumulated deferred tax balances in Account No. 282. Our considerations were based upon the assumption that a given company may continue to take liberalized depreciation on all of its plant additions, both past and future. Southern, on the other hand, proposes to continue to use these deductions only with respect to past plant additions and to take straightline depreciation with respect to future plant additions. As a consequence of that election and Southern's proposal to discontinue deferred tax accounting, the accumulations in Account No. 282 may be expected to gradually dissipate. This is consistent with our intention and policy contained in Opinion No. 417. We shall, therefore, provide that our waiver of Southern's obligations under Subparagraph A[3] and these balances shall remain subject to the other provisions of Account 282 and to our further order in any general rulemaking proceeding governing the dissipation of such balances consistent with the policy decided upon in Opinion No. 417.

The Commission finds:

(1) Good cause exists for waiving only the 30 day notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Southern's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30 day notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act are hereby waived subject to terms and conditions of this order and of the rate reduction proposal.

(B) Within twenty (20) days after the issuance of this order, Southern shall file with the Commission, and serve on its customers and interested State commissions, copies of Statements L, M, and N, pursuant to Section 154.63 (b) (4) of the Commission's Regulations under the Natural Gas Act in support of its proposed rate reductions. Comments thereon, if any, shall be filed within thirty (30) days after service by Southern of such Statements.

(C) The revised tariff sheets specifically described herein are accepted for filing to become effective as of April 1, 1964, as proposed by Southern's filing on April 1, 1964, subject to the terms and conditions of this order.

(D) Southern's request, pursuant to Account 282, Subparagraph D of the Commission's Uniform System of Accounts, that it be permitted to discontinue, effective January 1, 1964, its deferred tax accounting with respect to plant additions placed in service prior to January 1, 1963, is hereby granted; *provided, however*, that this permission is deemed to be a waiver of compliance of Subparagraph A of Account 282 only and is not to be considered a waiver of other subparagraphs of Account 282; and *provided, further*, that the balances of accumulations in said Account 282 shall also be subject to any further general order of the Commission concerning the dispositions of the balances in Account No. 282 which may result from the rule-making proceeding to implement the policy decided in and consistent with Opinion No. 417 (31 FPC 208 at 219–221), or any other proceeding for that purpose.

(E) Southern shall comply with each of the provisions of its agreement and rate-reduction proposal relating to future refunds and rate reductions.

(F) Within twenty days of making refunds in accordance with paragraph (E) herein, Southern shall report to the Commission, in writing and under oath, the amount of principal and interest so paid, together with a computation showing the manner in which such refund was determined, and shall serve a copy of such report upon each customer receiving a refund, and upon interested State commissions.

---

[3] Subparagraph A requires Account No. 282 to be credited with amounts equal to that by which taxes on income are lower because of the use of liberalized depreciation as compared to depreciation on a straight-line basis.

(G) All natural gas companies subject to the jurisdiction of the Commission which directly or indirectly receive gas supplier rate reductions and refunds as a result of this order shall proportionately reduce their rates and refund to their customers without additional interest all refunds received from Southern Natural Gas Company within 45 days of receipt of reductions and refunds. If any such natural gas company objects to making reductions and refunds, it shall file a protest with the Commission and before being required to make such reductions and refunds will be afforded a hearing. Within 30 days after making the refunds required by this paragraph, all such natural gas companies shall report to the Commission in writing and under oath the manner of making such refunds, including a list of customers and the amount refunded to each customer.

(H) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Southern Natural Gas Company, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Southern Natural Gas Company or any other persons or parties affected by this order.

Commissioner Woodward *not participating.*

OPINION NO. 428

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-1

OPINION AND ORDER DETERMINING RATES AND PROVIDING FOR REFUNDS

(Issued May 14, 1964)*

Syllabus

1. Historically, Commission has used a test period with adjustments for known changes occurring within reasonable time. P. 1186.

---

*Initial decision appears on P. 1222. Rehearing granted for purposes of adequate consideration, 31 FPC 1629; see also settlement order at 32 FPC 1515.

Petition to Review dismissed *sub nom. Texas Eastern Transmission Corp.* v. *F.P.C.*, 357 F. 2d 232 (CA5–1966) [Refund review proceeding].

Set aside *United Gas Pipe Line Co.* v. *F.P.C.*, 357 F. 2d 230 (CA5–1966); cert. granted 384 U.S. 984 [Tax issue]; affirmed, 386 U.S. 237 (1967).

2. Since here extensive facilities were put in service in 1962, substantially changing company's operations in 1963, it was proper to employ 1963 gas volumes with proposed March 31, 1962 test year cost of service adjusted incrementally to such increased volumes. P. 1186.

3. Commission would be remiss in accepting producer-affiliate's filed rates for pipeline's purchased gas costs, but is not required to include full-blown inquiry into such rates in instant proceeding. P. 1187.

4. Question of cost of gas purchased from producer-affiliate deferred until decision in affiliate's pending rate case. P. 1188.

5. Reasonable contributions to recognized charities constitute a proper operating expense. P. 1189.

6. Federal income tax allowances computed on basis of 52 percent rate in effect when record closed; however pipeline is required to file rate changes to reflect statutory rate of 50 percent in 1964 and 48 percent in 1965, as prescribed by Revenue Act of 1964. P. 1190.

7. Using the five-year period 1957-1961, and *Cities Service* method for determining effect of consolidated tax return, Commission *finds* pipeline's share of parent's consolidated tax return to represent an effective tax rate of 50.04 percent. P. 1191.

8. Commission *rejects* contention that in computing United's income tax liability it should treat pipeline as if it had availed itself of statutory liberalized depreciation and guide-line depreciation rates irrespective of whether parent had in fact actually utilized such depreciation provisions. P. 1191.

9. Since prepayments [for gas paid for but not actually taken] are non-recurring, they should not be deducted in determining United's tax allowance. P. 1192.

10. Accumulated gas prepayments should be included in working capital, being amounts expended to retain available supply of gas, prior to receipt of related revenues upon which return should be realized. P. 1192.

11. Question of regulatory treatment of investment tax credit has been rendered moot by Congressional prescription that regulatory agencies shall not use such taxes for purpose of establishing company's cost of service without company consent. P. 1193.

12. In determining rates for future period beginning January 1, 1963, it was proper to adjust rate base to include plant put in service after proposed test year. P. 1194.

13. Historically, Commission has favored rolled-in methods of allocation so that all customers share equally in pipeline's cost—unless length of pipeline required zone differentials. P. 1195.

14. In prior United order, so-called Method 8 allocation was justified on ground that pipeline's system was two separate systems, with smaller interconnecting facilities. P. 1196.

15. Pipeline's system being not developed to stage where rolled-in allocation may be applied, any rates established under such allocation would be too disruptive of pipeline's business relationships in view of historical pattern; accordingly, Commission *disapproves* proposed roll-in of costs, but expects in future allocations that United's costs will trend in direction of complete roll-in. P. 1197.

16. Desirable principle of rate-making is to assign cost directly when feasible and employ cost allocation only when necessary. P. 1197.

17. Operation of new 30-inch pipeline basically changes operation of United's system, requiring departure from Method 8 allocation. P. 1198.

18. Commission *adopts* roll-in of pipeline's two northern zones, but extends such allocation to transmission and purchased gas costs prior to an allocation between jurisdictional and non-jurisdictional customers, thus carrying out intent to treat the two zones as one. P. 1198.

19. Giving weight to both historical and cost considerations, Commission *approves* 3.5 cents per Mcf differential in commodity components between Central and Jackson rate zones. Pp. 1198, 1199.

20. Because of competition, it has generally been necessary to establish a balance between demand and commodity factors differing from standards set forth in *Atlantic Seaboard*. P. 1200.

21. Rates fixed here will prevent loss of sales without placing unnecessary burden on domestic and commercial ultimate consumers. P. 1201.

22. While Commission under Section 5(a) has no authority to order rate increases, it may determine appropriate differentials in rates and authorize pipeline to balance its revenues. P. 1201.

23. Under Section 4(e), Commission is not required in a general rate increase proceeding to exempt from refund provisions separate schedule filings representing decreases. P. 1202.

24. Parties not deprived of due process in exclusion of evidence, since Commission determination on allocation and rate design were based on other evidence in record, and thus parties have not been prejudiced. p. 1203, 1204.

25. In proceeding arising under Section 4(e) of the Natural Gas Act, Commission *determines* just and reasonable rates and *provides* for refunds.

Commissioner O'Connor *concurs*, except as noted.

Commissioner Woodward *concurs in part; dissents in part.*

***Thomas Fletcher* for United Gas Pipe Line Company.**

***Robert O. Koch, William Feldhaus, Daniel O'Connell, Richard J. Connor, Christopher T. Boland,* and *George J. Meiburger* for Texas Gas Transmission Corporation.**

***Keith M. Pyburn, Jack D. Head,* and *Joseph F. Weiler* for Texas Eastern Transmission Corporation.**

***Charles C. McDugald* for Natural Gas Pipeline Company of America.**

***W. Russell Gorman, John H. Hendren,* and *Cleon L. Burt* for Mississippi River Fuel Corporation.**

***Charles E. McGee* and *James D. McKinney, Jr.* for Algonquin Gas Transmission Company.**

***William S. Tarver* and *Hugh J. Morgan, Jr.* for Southern Natural Gas Company.**

***William R. Duff* for Public Service Electric and Gas Company.**

***George Spiegel, Reuben Goldberg,* and *George E. Morrow* for Memphis Light, Gas and Water Division of the City of Memphis, Tennessee.**

***Bryce Rea, Jr.* and *Thomas M. Knebel* for Willmut Gas & Oil Co. and Tyler Gas Service Company.**

***George C. Williams* for The East Ohio Gas Company.**

***Thomas A. White* for Hope Natural Gas Company and The River Gas Company.**

***G. Kirby Herrington* for New York State Natural Gas Corporation.**

***James B. Sayers* for Peoples Natural Gas Company.**

***C. William Cooper, H. B. Griffith, Jr.,* and *Norman A. Flaningam* for The East Ohio Gas Company, Hope Natural Gas Company, The River Gas Company, New York State Natural Gas Corporation, and The Peoples Natural Gas Company.**

***Thomas F. Brosnan* for Western Kentucky Gas Company.**

B. Hudson Milner and *Gavin H. Cochran* for Louisville Gas and Electric Company.

John H. Groves for Indiana Gas and Water Company.

Major James E. Macklin, Jr. for Department of Defense and all other executive agencies of the Federal Government.

John Kuykendall, Jr. for Mississippi Valley Gas Company.

James O'Malley, Jr., H. G. Skinner, Ronald D. Jones, and *Eugene Thomas* for Consolidated Edison Company of New York, Inc.

Vincent P. McDevitt, Samuel G. Miller, and *Henry P. Sullivan* for Philadelphia Electric Company.

James B. Williams for Alabama Public Service Company.

John E. Holtzinger for The United Gas Improvement Company.

J. David Mann, Jr. for Laclede Gas Company of St. Louis.

Richard Littell and *Robert E. Shaw* for Tennessee Gas Transmission Company.

Edwin F. Russell and *Harry G. Hill, Jr.* for The Brooklyn Union Gas Company.

James R. Wetherbee for Southern Union Gas Company.

John W. Glendening, Jr., John S. Schmid, and *John A. Gage* for Boston Gas Company.

John W. Glendening, Jr., John S. Schmid, and *Richard A. Sullivan* for Bristol and Warren Gas Company.

John W. Glendening, Jr., John S. Schmid, Richard L. Brickley, and *Halycon G. Skinner* for Brockton Taunton Gas Company.

John W. Glendening, Jr., John S. Schmid, and *H. Bissell Carey, Jr.* for the Hartford Electric Light Company.

John W. Glendening, Jr., John S. Schmid, and *Robinson, Robinson and Cole* for The Hartford Gas Company.

John W. Glendening, Jr., John S. Schmid, and *Cornelius C. Moore* for The Newport Gas Light Company.

John W. Glendening, Jr., John S. Schmid, and *John N. Worcester* for North Attleboro Gas Company.

John W. Glendening, Jr., John S. Schmid, and *D. G. Allen* for Norwood Gas Company.

John W. Glendening, Jr., John S. Schmid, and *Hinckley, Allen, Salisbury & Parsons* for Providence Gas Company.

John W. Glendening, Jr. and *John S. Schmid* for Buzzards Bay Gas Company, Cambridge Gas Company, The Connecticut Gas Company, Fall River Gas Company, New Bedford Gas and Edison Light Company, New Haven Gas Company, City of Norwich, Department of Public Utilities, The Pequot Gas Company, South County Gas Company, Tiverton Gas Company, and Worcester Gas Light Company.

Kent H. Brown and *Barbara M. Suchow* for New York Public Service Commission.

Arnold D. Berkeley and *Harwood G. Martin* for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

BLACK, *Commissioner:*

This proceeding arises under Section 4(e) of the Natural Gas Act upon a filing by the United Gas Pipe Line Company on June 15, 1962, seeking an annual increase in the rates and charges to United's jurisdictional customers of approximately $5,600,000, to be effective August 1, 1962. The United Gas Pipe Line Company is a large pipeline system operating in Texas, Louisiana, Mississippi, Alabama and Florida. (See map, Appendix 1). It purchases gas from producers including its affiliate Union Producing Company and sells gas for direct consumption by industrial customers and for resale by towns, distribution systems and pipelines which in turn transport gas to the mid-continent and the eastern seaboard. Both United and Union are owned entirely by United Gas Corporation which also operates distribution systems in Texas, Louisiana and Mississippi. Events subsequent to United's filing, primarily producer rate reductions, so reduced United's jurisdictional costs that the jurisdictional increase became a net rate increase of only $1,600,000 as of January 1, 1963.[1]

By Commission order of July 27, 1962, the proposed increased rates were suspended until January 1, 1963, on which date they became effective,[2] subject to refund of all amounts collected above those found to be just and reasonable in this proceeding. The hearing commenced on November 27, 1962, after service of the direct case in chief and exchange of proposed testimony and exhibits pursuant to the expedited hearings procedure prescribed by the Commission on August 6, 1962 (28 FPC 295).[3] The examiner's decision was issued on June 17, 1963, and upon request of the parties in their exceptions thereto,[4] oral argument was held before the Commission on September 20, 1963. The proceedings, involving numerous issues, are now before us on these exceptions to the examiner's decision.

On some of the issues there is no dispute. One of these is the rate of return on which United presented evidence, but the staff, United and all participants stipulated 6.5 percent as the fair rate of return. Other matters not in dispute are depreciation and taxes other than income tax. Included in the cost of purchased gas are payments under rates which are subject to Commission proceedings; United therefore agrees that the rates determined in this proceeding will be subject to adjustment to reflect final determination of any such conditionally effective gas purchase prices included in the cost of service. The remaining issues relating to (1) the test period, (2) the cost of service including the cost of purchased gas, federal income taxes, the amount of prepaid gas in the rate base, (3) allocation of costs, and (4) the design of rates, are strongly contested by the parties. Also certain interveners contend that the expedited hearing procedures have substantially deprived them of their rights to due process. Included within the issue pertinent to federal income taxes was a question of far reaching significance to the natural-gas and electric utility industries as a whole, the proper treatment for rate making purposes of the investment tax credit authorized by the Internal Revenue Act of 1962. However, subsequent to the argument of this case Congress has prescribed that such investment tax credits shall not be used to reduce the pipeline's federal income taxes for the purpose of establishing the cost of service without the consent of the company. Therefore this is no longer an issue in the case.

---

[1] Since the close of the record there have been further producer rate reductions so that the jurisdictional increase of $1,600,000 would become a $600,000 net decrease as of August 30, 1963.

[2] On December 19, 1962, United filed substitute rates to reflect the reduction in its costs which had occurred and these were permitted to become effective January 1, 1963, by Commission order of January 17, 1963.

[3] The order of August 6, 1962 directed United to serve its direct case in chief by August 21, 1963, interveners and staff to serve their proposed testimony and exhibits by October 1, 1962, and that a pre-hearing conference be held on October 22, 1962. These dates were complied with by the parties. The pre-hearing conference set November 19, 1962, as the date for filing of United's rebuttal case. The hearing lasted from November 27, 1962 through January 28, 1963. Briefs and reply briefs were thereafter exchanged.

[4] Mississippi River Fuel Corporation, Mississippi Valley Gas Company, United Gas Pipe Line Company (7/5/63); Texas Eastern Transmission Corporation, Southern Natural Gas Company, Commission staff, Memphis Light, Gas and Water Division, Willmut Gas and Oil Company, Laclede Gas Company, Texas Gas Transmission Corporation and Louisville Gas and Electric Company, Western Kentucky Gas Company, Public Service Electric and Gas Company, *et al.* (Eastern Intervenors), Natural Gas Pipeline Company of America (7/8/63); Southern Union Gas Company, Tyler Gas Service Company (7/9/63).

TEST PERIOD

United filed its rate increase on June 15, 1962, with a base period of 12 months ending March 31, 1962, with adjustments for newly constructed facilities to go into service before November 30, 1962. United contends, and the examiner agrees that this is in compliance with Section 154.63(e)(2)(1) of the Commission's regulations, which provide in part as follows:

> . . . based upon a test period which shall consist of a base period of 12 consecutive months of most recently available actual experience, adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of the filing, and which will become effective within nine months after the last month of available actual experience utilized in the filing, but in no event shall such test period extend six months beyond the date of filing.

Staff, however, argues that rates for the future are not set for a single year but for a future period of indeterminate duration upon the basis of normalized conditions. Thus staff contends that we should make adjustments to the test year sales presented by United so that we would reflect the revenue increase experienced by the company as a result of its investment in new facilities put in service April 1, 1961 through November 30, 1962, and included in the test year rate base. For this purpose the staff adopted an estimate of 1963 sales presented by United. On the other hand United argues that staff use of estimated 1963 sales has the same effect as if staff were to use an estimated 1963 test year in violation of the Commission's historic policy requiring filing data based on a test period of the latest 12 months of actual experience adjusted for known changes occurring within a stated period.

Of course, it is common in rate cases to adjust cost of service items, particularly items of expense, where a change has been made after the end of the test year. In the present case the situation is peculiar, and something more than the usual adjustment is required. United's claimed rate base includes $56,248,618 of newly certificated gas facilities which were not in service throughout the base period, but were scheduled to become operative on or before November 30, 1962. These facilities include the important new line from southern Louisiana to Sterlington in northern Louisiana. Costs associated with the new facilities include depreciation, return, and state and federal taxes. The record shows that these new facilities would be used for sales made after the proposed rates took effect on January 1, 1963. In supporting its proposed rates for a future period it was proper for United to include these facilities, for if it had confined its presentation to an average of net plant in existence during the period ending March 31, 1962, the cost results would not have been representative of the future period when the rates would be in effect. By the same token the staff was also proper in contending that 1963 sales should be taken into account instead of the test year sales presented by United. The 1963 sales amount to 1,343,703,213 Mcf at 14.9 psia, as shown by United in its rebuttal case and as adopted by the staff. Furthermore, upon consideration of certain adjustments made by the staff, the record shows that this volume of gas is not an estimate of all the gas to be delivered in 1963 but is limited to that which can be handled by the normalized March 31, 1962, test year facilities.

In our opinion, United misconceives the purpose of the Commission's regulations with respect to a filing of a proposed rate change. The Commission intended, as United notes, that its amended regulations expedite proceedings by providing for the submission of extensive data in support of the rate filing, so that this material would not have to be obtained in a time consuming investigation after the filing of the proposed changes. The Commission stated in amending its regulations, again as noted by United, that the applicant might adduce additional material or present data on a different basis to the extent desirable, but that the supplemental material must relate to the prescribed test year (28 FPC 495). Obviously adjustment by the company may require offsetting adjustments by other parties. In the past we have used a test year "with adjustments for known changes occurring within a reasonable time." *Panhandle Eastern Pipe Line Co.*, 25 FPC 787, 795, remanded on other grounds *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 305 F. 2d 763, (CADC, June 30, 1962), certiorari denied 372 U.S. 916; see also *El Paso Natural Gas Co.*, 22 FPC 260, 263, remanded on other grounds *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567 (CA5), certiorari denied 366 U.S. 912. The objective is to present adjustments to the test year figures which will match additional expenses with additional income as close as is reasonably possible. What is reasonable obviously depends upon the circumstances. Since extensive facilities were put into service in 1962, so as to change the company's operations substantially in 1963, it was proper to employ 1963 volumes of gas with the March 31, 1962 test year cost of service adjusted incrementally to these increased volumes of gas.

COST OF SERVICE

There are several cost of service matters at issue between the parties. These include purchased gas costs (including the amount paid to United's affiliate, Union Producing Company), federal income taxes, and the computation of the rate base including the question whether there should be an allowance for prepaid gas costs.

A. *Purchased Gas Costs*—The cost of purchased gas represents about 75 percent of United's cost of service.[5] Controversy arises over the estimated purchasing pattern for the year 1963 compared with the test year ending March 31, 1962. United's average cost of gas purchased during the base year was 17.71 cents per Mcf. Under its adjusted gas purchase pattern for 1963, including increased takes from the higher priced fields in southern Louisiana, the unit cost rose to 18.40 cents. The witness for United testified that the purchase pattern was one of judgment in applying a formula which took into account a number of factors including the capacity of its system, availability of gas, state conservation statutes, the takes of other purchasers within the field and drainage conditions. The staff, on the other hand, argued that United had not taken into account the element of cost. It constructed a purchase pattern of its own for the Houston and Lafayette districts. It used United's adjusted average cost of gas derived from United's adjustment of test year costs and volumes to November 30, 1962. On our part we are convinced by the evidence that the dispatching of gas from the various fields to meet the obligations of the pipeline is a very complicated activity particularly in view of contract obligations and the state regulation of takes. An adequate supply of gas might be threatened if United were to be required to take the lower priced gas. It seems obvious to us that if United were required to use the lowest priced gas first, it would result in an accelerated increase in purchased gas costs.

---

[5] $249,169,755 out of a total cost of service of $325,731,603, as determined herein.

As set forth by the examiner whose views we are adopting here, United included in its purchased gas costs approximately $18,600,000 paid to Union, a wholly owned gas producing subsidiary of United's parent, for approximately 131,000,000 Mcf of gas at an average cost of 14.2 cents per Mcf. The prices used by United are based on rate schedules of Union filed with this Commission. To support the prices paid, United put in a complete cost of service case based on Union's 1961 costs. Staff and interveners moved to dismiss this evidence on the ground that Union's rates were the subject of a proceeding in Docket No. G–13811. The examiner granted the motion on the ground that the Union proceeding provided an adequate vehicle for the determination of that portion of United's cost of service represented by gas supplied by Union and to turn this pipeline rate proceeding into a de novo full-blown investigation of the economic justification of Union's price to United would duplicate a producer rate proceeding. In his decision the examiner reaffirmed this position.

Applicable to this proceeding is the authority of *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619 (CADC), certiorari denied 355 U.S. 904. There in a case involving United's rates the Commission said that while it was empowered to inquire into United's contract prices with Union, it was not required to do so and its not doing so was a reasonable exercise of administrative discretion. The court, however, held that the Commission should have inquired into Union's prices saying:

> Therefore we think the Commission must at least inquire into the factual justification for the price increases paid by United to Union. By this we mean that to include the increased prices in the costs of United the Commission must at least determine that the increases were justified by reason of Union's costs or by reason of some other stated end of the Natural Gas Act; the Commission must ascertain that they were not mere bookkeeping or intra-corporate-system adjustments. We must remand the case for that inquiry. We do not hold that a full-blown inquiry into the rates of Union is necessary. Subsequent developments in the proceeding may or may not indicate such a necessity.

In *Willmut Gas and Oil Company* v. *F.P.C.*, 299 F. 2d 111 (CADC) the Commission also had rates of United before it. After the decision in the *Mississippi River Fuel* case United sought to reopen the hearing so that evidence might be offered to substantiate the amounts for cost of gas purchased from Union. The Commission refused to receive such evidence, but on review confessed error and asked that matters be remanded for further proceedings concerning the factual economic justification for Union's charges.

In view of these decisions it is entirely clear that we would be remiss in accepting Union's filed rates for United's purchased gas costs. The courts, in effect, place the filed rates of an affiliate in a different category than those of a non-affiliate. This follows reasonably because, as the court said, we are dealing with a single corporate structure. We must therefore do something more than accept the filed rates, as United would have us, but we are not required to include a full-blown inquiry into Union's rates in the present proceeding.

We have a means of meeting the requirements of the court in these cases without initiating another rate case for Union. We have had before us the proceeding in Docket No. G–13811, *et al.*, relating to Union's rates. This is an investigation under Section 5(a) of the Act consolidated with eight Section 4(e) dockets covering nine rate schedules of Union's charges to United. Of the eight Section 4(e) dockets involved[6] only three have not been superseded by subsequent rate filings and represent sales in 1963.[7] In our Opinion No. 414 issued on January 9, 1964 we determined that Union had failed in its proof to support the Section 4(e) rates, but that the record was not sufficient to make a determination of Union's rates for the future particularly with respect to the matter of depletion. Therefore we disallowed Union's increased rates proposed in the Section 4(e) dockets and remanded the proceedings so that the record could be amplified for the purposes of the Section 5(a) investigation (Docket No. G–18354). In doing so we required that Union adduce evidence with respect to a more current test year.

In the present proceeding it would be inappropriate to determine Union's rates even if the record were complete, for it would be wasteful to determine Union's rates in two proceedings possibly with inconsistent results. We shall therefore leave the question of the cost of gas purchased from Union undecided to await the final result in the *Union* case. This, in our opinion, will meet the criteria of the court in the *Mississippi* case that a factual economic justification for Union's rates be shown. For the period here involved beginning with January 1, 1963, we shall accept as United's purchased gas costs Union's filed rates (even though subject to suspension in other proceedings) except for the filed rates covered by dockets in the *Union* case and still not superseded. In the case of those unsuperseded Union rates we shall accept only the rates in effect previous to the *Union* case filings, for we have already found those rates unjustified. Upon final determination of Union's rates we shall require United to file rate reductions if appropriate and to refund to its customers amounts which represent the difference between what it has paid for gas and what it should have paid if the rates finally determined in the *Union* case had been in effect.

B. *Adjustments to Operating Expenses—Other than Purchased Gas Costs*—The use of 1963 volumes for gas sales requires an adjustment to United's operating expenses in addition to purchased gas costs, so that expenses will correspond to sales in the cost of service. The controversy arises here because the staff has used an incremental adjustment amounting to 0.7 cents per Mcf for the amounts by which the 1963 volumes exceed the test year volumes, while United would use 2 cents per Mcf.

The staff supports its conclusion by a study of the trends of operating expenses and their unit cost over the period 1949 to 1961. Through formulas utilizing the historical operating expenses and volumes it arrived at an adjustment of the test year operating expenses so as to reflect the 1963 sales. The basis of this approach is that an increase in the volumes of gas sold will result in a lower unit cost of gas or, in other words, the additional volumes will have a lower cost per Mcf on an incremental basis. We do not deny that if the same facilities can be used and the other costs remain static, increased volumes can be sold at a lower operating expense per unit. The record shows that comparing certain years with other years this situation has occurred, but this does not reflect the recent trend. The staff shows unit costs as follows for the years 1953-1961 in cents: 2.00, 1.97, 2.00, 2.02, 2.05, 1.99, 1.97, 1.97, 2.03. Based on the year 1953 this would result in incremental costs as follows for the years 1954-1961 in cents: 1.49, 1.97, 2.15, 2.34, 1.96, 1.86, 1.87, 2.22. The staff studies, as noted, were based on a period extending back to 1949, but since the unit costs and incremental costs levelled out with some variations at about 2 cents in the 1954-61 period we shall use the rounded figure of 2 cents to compute the adjustment of operating expenses so as to reflect the 1963 gas volumes. This, of course, does not prevent us finding in another case and under different circumstances that additional volumes of a pipeline's gas can be sold without an equivalent increase in operating expenses so that the unit operating cost of the additional gas would, indeed be lower than the unit operating cost of the original gas. The Commission is not ruling that the method of determining incremental costs in this opinion is the only acceptable method.

---

[6] G–13811, G–13820, G–14114, G–14352, G–14553, G–16725, G–17589, and G–17606.

[7] G–14114, G–14552 and G–17589 excluding the effect of a filing to reflect the unconstitutional Louisiana gas gathering tax. (See Appendix 3.)

Apart from the 2-cent factor United has made certain errors, in computing its adjustment to operating expenses as contended by the Eastern Intervenors. United computed its incremental volume to be 86,868,613 Mcf apparently by deducting its adjusted March 31, 1962, test year volumes in the amount of 1,310,305,755 Mcf from the estimated 1963 volumes in the amount of 1,397,174,368 Mcf.[8] Its adjustment of the test year volumes was apparently to compensate for loss of certain sales, but it made no corresponding adjustment in operating expenses. Therefore we shall subtract the unadjusted test year volumes in the amount of 1,323,015,653 Mcf from the 1963 estimated volumes of 1,397,174,368 Mcf to arrive at an incremental volume of 74,158,715 Mcf and an incremental cost (at 2 cents per Mcf) of $1,483,174 instead of United's $1,737,372, thus reducing United's incremental cost by $254,198.

Further, United added $224,514 in operating expenses reflecting the new 30-inch North Louisiana pipeline and a 36-inch pipeline from the Bastian Bay Field. Since the 2-cent cost allowance is designed to take into account all increases in cost, this adjustment represents an additional allowance for the same thing and should not be included in the allowance for the additional volumes of gas. Also United indicated that an amount of $349,237 should also be eliminated from operating expenses representing expenses under an agreement with Texas Gas for transportation which had ceased. Therefore using the 2 cents per Mcf for the incremental gas and taking into account the adjustments shown above there results an allowance for operating expenses, other than purchased gas costs, in the amount of $27,001,997 as shown in Appendix 2 hereto.

As discussed below in connection with taxes there is an issue herein as to whether we should deduct charitable contributions in the amount of $163,322 in computing the income tax allowance. We believe that contributions of a reasonable amount to recognized and appropriate charitable institutions constitute a proper operating expense.[9] Corporations have an obligation to the communities in which they are located and they are expected to recognize this obligation. It is our opinion that these contributions have an important relationship to the necessary costs of doing business.

According to the record, the sum claimed by United is deductible for Federal income tax purposes. Moreover, it represents only about one-twentieth of one percent of United's cost of service. In these circumstances, we shall allow the item of $163,322 as an operating expense; take it into account in computing working capital like other operating expenses; and allocate it in proportion to administrative and general expense.[10]

---

[8] Composed of estimated transportation volumes of 53,471,155 Mcf and sales volumes of 1,343,703,213 Mcf.

[9] As a maximum we would allow contributions to those organizations included in the Cumulative List, Organizations described in Section 170(c) of the Internal Revenue Code.

C. *Federal Income Taxes*—In its cost of service United has included Federal income taxes in the amount of $12,751,454 calculated at the 52 percent statutory rate in effect at the time the record was closed. We shall use the 52 percent rate as a basis of our computations for it applied through 1963, the first year that our prescribed rates are effective. We shall require, however, that United file rate changes to reflect the statutory rates of 50 percent in 1964 and 48 percent in 1965 as prescribed in the Revenue Act of 1964.[11]

1. *The Effect of the Consolidated Return.*

A question is raised as to United's share of the federal income tax paid through a consolidated tax return filed by United Gas Corporation, its parent. Joined in the return are the subsidiaries, United, Union, and United Overseas Production Corporation. In most years Union shows a loss[12] with a resulting reduction in taxes for the consolidated group. However, United contends that it is entitled to apply to its taxable income the statutory income tax rate in computing the amount of federal income taxes includible in its cost of service unreduced by utilization of tax reductions and losses attributable to the unrelated, nonjurisdictional and non-utility-operations of affiliated companies.

The question here involved has already been determined by us in *Cities Service Gas Company*, 30 FPC 158, Opinion No. 396, Docket No. G-18799, issued July 15, 1963. In that proceeding we stated that the proper method was to (1) separate the companies into regulated and unregulated groups, (2) determine the net aggregate taxable income of each group, and (3) apportion the net total consolidated tax liability over a representative period of time between the two groups and among the companies in the regulated group, on the basis of their respective taxable incomes.

Before making the computation prescribed in *Cities Service*, it is necessary, as in that case, to decide on the period of time to be used in the computations. The record shows extensive data for the five-year period 1957-1961, and since there are substantial variations in the taxable income for those years, a period as long as this is reasonable. The record does contain some evidence on the year 1962; but, this evidence is in part composed of estimates, and, in any event 1962 is not a typical year for United for tax purposes, because of the rate refunds made that year. Therefore for the purpose of the tax computations we shall use the five-year period 1957-1961.

In making a separation between the regulated and non-regulated companies we find that United is largely a regulated company, and we shall designate it as such for the purpose of these computations. United Gas Corporation engages in the distribution of gas and its rates are variously subject to regulation by state commissions and municipalities. There is no regulation involved in connection with its sale of gas appliances, appliance repair services, research, and the receipt of interest and dividends. However, since this non-regulated portion of its business is closely connected with the regulated and the record makes no separation, we shall consider United Gas Corporation in the regulated category. Union is engaged in the sale of natural gas, natural gas liquids and oil. Only the sale of gas is subject to regulation. While the record would permit an allocation of Union's taxable income between its regulated and non-regulated business, arithmetically, this would make no difference because Union has a net taxable loss over the 1957-1961 period, and no part of the consolidated tax would be allocated to it whether it be classified as regulated or non-regulated. United Overseas operates entirely outside the United States and is engaged in an oil exploration project in Tunisia, North Africa, so that it is in the non-regulated category. No portion of the consolidated tax would be allocated to it in any case because it produced a loss.[13]

---

[10] I have prepared this opinion to express the views of the majority, but at this point note my individual disagreement with the Commission's new rate-making treatment of charitable contributions. Such payments, as commendable as they may be, are properly accounted for as income deductions, not operating expenses. They bear no relationship whatever to the necessary costs of providing utility service and therefore should not be borne by the utility customers. Charitable contributions, if made by the Company, should be the sole responsibility of the stockholders. It is argued that a public utility has a community and civic responsibility and should therefore be encouraged to support deserving charities. I agree. But the financial burden of donations to charities should not be shifted to the consumer who had no voice in their selection. A contribution to a charitable organization is uniquely a matter of personal choice and should not be hidden in a customer's gas bill, especially when its beneficial effect may be far removed from his community.

[11] Public Law 88-272.

[12] United Overseas was not included in the consolidated return until 1961 when it showed a small tax loss.

As shown in Appendix 5 hereto the net total consolidated tax liability for the United companies for the 1957-1961 period amounts to $57,199,881. The average for one year amounts to $11,439,976. In accordance with the *Cities Service* case the latter amount is allocated between United Gas Corporation and United Gas Pipe Line in proportion to their respective taxable incomes for the 1957-1961 period as shown in Appendix 5. United Gas Pipe Line's share, in accordance with this computation, amounts to $10,537,362, using the 52 percent statutory tax rate. This represents an effective tax rate of 50.04 percent based upon the five-year average. When this effective tax rate is applied to United Gas Pipe Line's test year, it results in a federal income tax allowance of $9,940,892 as shown in Appendix 4 below, subject, of course, to the rate reductions we require for the lowered tax rates in the year 1964 and again in 1965.

2. *Failure to Use Liberalized Depreciation and I.R.S. Guideline Depreciation Rates.*

Memphis contends that the tax laws, regulations and procedures permit the use of liberalized depreciation and of the guideline depreciation rates of the Internal Revenue Service[14] for determining United's income tax liability, and that the Commission in computing United's tax allowance for cost of service, should treat United as if it had availed itself of these statutory provisions, irrespective of whether the parent, United Gas Corporation, had in fact utilized them. Memphis has failed to make a showing that the public interest requires us in this case to treat the company as though it makes use of these statutory provisions contrary to its actual practices.

3. *Gas Prepayments.*

The issue of the tax effect of gas prepayments presents two important questions: the effect of the prepayments on the tax allowance in the cost of service; and the effect of the accumulated prepayments on the rate base. Technically, a gas prepayment is the amount that United has been required to pay in accordance with the take or pay provisions of its gas purchase contracts in excess of payments for gas actually taken. United claims these prepayments as deductions in its tax returns for the years in which they were made. However, in computing the test year cost of service in this proceeding United has treated the prepaid gas expense as deferred charges and has not included them in computing either its tax allowances or its cost of purchase gas in its cost of service for the test period. Thus only when delivery of the prepaid gas is ultimately taken would the cost of service reflect the corresponding prepayment charges. United does, however, include an amount of $5,937,060 representing an average test year balance of prepayments in its working capital for inclusion in the rate base.

---

[13] It appears in the consolidated return only in 1961 when its loss was $24,354.

[14] Section 167 of the Internal Revenue Code and Depreciation Guidelines and Rules, I.R.S. Publication No. 456; Tables for Applying Revenue Procedure 62-21, I.R.S. Publication No. 457.

Memphis contends that this is improper; that United is entitled to and in fact takes a tax deduction for these gas prepayment charges in the years in which they arise and that it should be required to reflect these actual tax deductions in the test year period as well. On the other hand, staff and the examiner, with certain modifications, accept United's position that prepayments should not be deducted in determining the tax allowance in the cost of service. We agree with this position. Test year costs must often depart from the actual results in order to reach rates reasonable for the future. The record shows that United expected to incur deficiencies in the volumes of gas taken in 1963, but, subject to several contingencies, expected to be in balance during 1964. Beginning in the year 1965 United anticipates that it can begin to make up the deficiencies previously incurred. Whether these predictions are precisely accurate, we can conclude that the prepayments are non-recurring. Since we are determining rates prospectively, any decrease in the actual taxes in the test year will disappear in those years when the prepaid gas is actually consumed, and this promises to be in the near future. Thus a more representative tax allowance can be computed by not using the gas prepayments as deductions.

Further, we agree with the staff and the examiner that accumulated prepayments should be included in working capital. These amounts are expended in order to retain an available supply of gas and precede by several years the receipt of the related revenues to be realized when the gas paid for in advance is made up and sold. While the record indicates that the balance of prepayments, amounting to $15,340,800 on December 1, 1962, may be reduced beginning in 1965, they represent an investment of cash on which a return should be realized for some years in the future. United would include in working capital only the average test year amount of $5,937,060 rather than the full accumulation. We think the lesser amount more representative of the future and shall employ it in computing working capital.

The examiner, following the contentions of the Eastern Intervenors, would reduce the credit to working capital for prepaid gas by the amount of taxes saved in using the prepayments as a deduction.[15] We agree with this in principle. If United has saved taxes in making its prepayments, its investment is correspondingly reduced. However, the record indicates that although the prepayments are claimed by United as tax deductions, they may eventually be disallowed. In that case United would have no way of recovering the revenues lost as a result of reducing the credit to working capital. We will provide that United shall adjust its rates and make appropriate refunds when and if it is finally determined that the prepayments were properly deductible on its tax returns. To achieve this result with a minimum of dispute, we shall direct United to establish a special account out of earned surplus to reflect deductions taken by virtue of these prepayments.

---

[15] The examiner used the accumulated prepayments in the amount of $15,340,800 less 52 percent less the related income tax reduction to working capital.

4. *Regulatory Treatment of the Investment Tax Credit.*

United's cost of service presentation makes no provision or allowance for reductions in its income tax expenses attributable to the investment tax credit authorized by the Internal Revenue Act of 1962.[16] Staff and Memphis argued that this was improper in that the investment tax credit was a tax reduction and hence an increase in United's net income. Thus they argued that, like any other tax reduction or savings, the credit must be reflected by an equivalent reduction in United's cost of service, with the result that these savings would flow through to net income and United's customers would have the benefit of the lower cost of service. As we have indicated, this issue has been rendered moot by the action of Congress prescribing that regulatory agencies shall not use such investment taxes for the purpose of establishing the company's cost of service without the consent of the company.[17] Our cost of service shall, therefore, make no adjustments for, or otherwise give consideration to the investment tax credits which United may qualify for under the tax law.

5. *Tax Deductions.*

The staff, and Memphis in part, have criticized the examiner for not finding that Federal and state income tax allowances should be based on (a) the more recent 1961 tax return data; (b) the five-year average of tax deductions for property abandonment losses, taxes capitalized, employee benefits capitalized and additional expenses capitalized during the years 1957-1961, inclusive, instead of the years 1956-1960, inclusive; (c) the $163,322 tax deduction for charitable contributions reflected in the 1961 return; and (d) the staff's proposed interest expense tax deduction of $10,772,145 based upon United's outstanding debt capital and actual interest rate as of November 30, 1962. In our opinion all of these factors except item (c), the charitable tax deductions, should be taken into account in computing United's tax allowance. Items (a) and (b) take advantage of more recent data available in the record, and United specifically does not object with respect to item (b), the five-year averages. Item (c), the charitable contributions, is being treated as an operating expense. As such it is automatically deducted in computing the income tax allowance since elements in the cost of service other than return are excluded from the computation. Accordingly, it should not be deducted a second time from return in completing the computation. On item (d), computation of interest as of November 30, 1962, United argues that this figure does not reflect the future in that its debt capitalization is subject to amortization and will be reduced after that date. Our purpose has been to adjust the base year ending March 31, 1962, in the light of the substantial amount of new facilities installed by United through November 30, 1962. Hence we have included in the rate base plant added up to that date. In our opinion the use of the additional plant in the rate base requires the use of the corresponding debt capitalization in the income tax computation.

D. *Rate Base*—The determination of the correct rate base for United is complicated by the adjustments that should properly be made to the test year plant in order to reflect additions to plant and corresponding sales and operating conditions for the future. United employed a gross plant in service of $550,530,859. This is based upon the average gas plant in service during the base period ended March 31, 1962, adjusted or normalized to include $56,248,618 of new gas plant put in service from April 1, 1961 to November 30, 1962. Because we are determining rates for the future beginning January 1, 1963, we think that the adjustment of the rate base to include plant put in service after the test year was reasonable. We have already discussed the corresponding necessity to use the 1963 volumes of gas sold limited to those sales which the record shows can be made with the 1962 normalized plant. In computing its rate base, however, United failed to deduct the corresponding reserves for depreciation. It deducted the average depreciation reserve for the base period ending March 31, 1962, but included no depreciation for the subsequent period up to November 30, 1962, during which additional plant included in the normalized rate base went into service. By this method United arrived at a net plant of $379,301,945.

---

[16] 26 U.S.C. § 38, 46–48.

[17] Revenue Act of 1964, Public Law 88–272, Section 203(e).

The staff in its brief, however, computed the net plant portion of the rate base somewhat differently. It started with the gas plant in service shown by the company as of March 31, 1962, normalized to include plant put in service up to November 30, 1962, amounting in all to $552,213,995. Because the staff used plant as of a date certain, namely March 31, 1962, it used the depreciation reserves as of that date plus the average depreciation that would accrue for the following year. This would take into account depreciation accruing after the end of the base period while the plant is in service.[18] The staff eliminated from the depreciation reserves as of March 30, 1962, the small amount of depreciation accrued on the portion of the $56,248,618 in additional plant that went into service before March 30, 1962, and arrived at an amount of $366,000,444 for net plant.

In general, we find that the staff's approach is correct. We agree with both company and staff that gross plant should be adjusted to reflect the new gas plant, including the Bayou Sale-Sterlington line, put in service between April 1, 1961 and November 30, 1962, for this is a significant factor in making rates for the future. We think the staff properly used an adjusted plant as of March 31, 1962, the last day of the test year, for, again, we are looking forward to the operation of an enlarged system.[19] However, United's presentation in the record shows that the corresponding depreciation reserve for the adjusted plant is $177,175,719 rather than the $176,209,678 used by the staff, and we shall deduct the $177,175,719 in determining the adjusted net plant. We agree with the staff that the average depreciation for the succeeding year in the amount of $8,347,684 should also be deducted. This follows again because we are concerned here with the operations of the enlarged plan in the future beginning with January 1, 1963. To include plant added after the end of the test year without making some adjustment for additional depreciation would distort the rate base. After deducting contributions in aid of construction in the amount of $1,835,567, about which there is no controversy, we arrive at net plant in the amount of $364,855,025.

The other important element in the rate base is working capital. This we compute in the usual way adding an allowance for gas prepayments as already explained:

---

[18] This approach was used in *Michigan Wisconsin Pipe Line Co.*, 21 FPC 306, affirming examiner's decision, 21 FPC 309, 315–317.

[19] See *Phillips Petroleum Co.*, 24 FPC 537, 565; affirmed *Wisconsin* v. *F.P.C.*, 373 U.S. 294, May 20, 1963.

Cash for operating expenses (45 days)	$2, 962, 881
Materials and supplies (average balance)	3, 237, 326
Prepayments—taxes, insurance, etc	774, 051
Prepayments—gas for future delivery	5, 937, 060
Underground storage gas	699, 219
	13, 610, 537
Less 50% of Federal income tax allowance	4, 971, 089
Net working capital	8, 639, 448

Accordingly the rate base is computed as follows:

Gross plant in service at Mar. 31, 1962, as adjusted	$552, 213, 995
Less depreciation	185, 523, 403
Less contributions in aid of construction	1, 835, 567
Net plant	364, 855, 025
Net working capital	8, 639, 448
Net investment rate base	373, 494, 473

E. *Conclusion on Cost of Service*—As set forth in Appendix 2 hereto, United's cost of service for the purposes of these proceedings is $326,056,503 after separation of the gasoline plant cost of service. This figure is some 6 million dollars less than the cost of service presented by the company based on estimated 1963 sales. It is applicable to the year beginning January 1, 1963, and is the basis for further adjustments and filings.

COST ALLOCATION AND ZONE RATE DIFFERENTIAL

This Commission has, historically, favored rolled-in methods of allocation so that all customers will share equally in the costs of a pipeline system, unless the length of the pipeline required zone differentials.[20] United, however, has traditionally been recognized as an exception to this principle, mainly because it has, in the past, operated two essentially separate jurisdictional systems, a line from Agua Dulce, Texas, extending northeasterly to Sterlington, Louisiana and a line from Lirette in southern Louisiana northward to central Mississippi through Jackson. But this is in the process of change as the result of the recently constructed line running from Bayou Sale in southern Louisiana to a point near Sterlington. The rates in each of these systems have in turn been subdivided into zones or rate areas where "substantially the same operating and natural conditions prevail, starting with the premise that the widest areas practicable in terms of average costs and physical characteristics of service should be designated."[21] There have been four zones called the Southwest, Central, New Orleans, and Jackson Zones as shown on the attached map.[22] Southwest and New Orleans are largely gas supply zones; Central and Jackson are largely gas sales zones. Thus, the problem of the allocation of

---

[20] *Trunkline Gas Co.*, 21 FPC 704, 711, aff'd as *Battle Creek Gas Co.* v. F.P.C., 281 F. 2d 42 (CADC–1960); *Kansas-Nebraska Natural Gas Co., Inc.*, 25 FPC 448, 453. See also *Louisiana Public Service Commission* v. *United Gas Pipe Line Company, et al.*, 3 FPC 402, 404, 405.

[21] *Louisiana Public Service Commission* v. *United Gas Pipe Line Company, et al.*, *supra.*

[22] The Southwest Zone included the Lafayette Zone now proposed by United.

United's cost of service and the formulation of just and reasonable rates is complicated by United's historical pattern of operations.

United's system of zone rate differentials has had a long history before the Commission.[23] It was considered most lately in the Commission's order of January 4, 1961, cited. There various modifications of the allocation of costs, known as "Method 8" and previously approved by the Commission, were proposed. Under Method 8 the purchased gas costs and the transmission costs of the New Orleans Zone were computed and applied to the New Orleans Zone and carried forward and applied with additional purchased gas and transmission costs of the Jackson Zone to that zone. Likewise, the costs of the Southwest Zone were applied to that zone and carried forward to the Central Zone and added to the costs of that zone. The effect of this was to permit the Southwest Zone customers in Texas, as well as the Central Zone customers, to benefit from the lower producers' prices of that zone. On the other hand the New Orleans Zone and Jackson Zone customers would be subject to the higher gas prices in Louisiana.

The Commission justified Method 8 in its January 4, 1961, order (25 FPC at p. 31) on the ground that United's system was, in fact, two separate systems with smaller interconnecting facilities. That is one system ran north from southern Louisiana and the other ran northeast from southern Texas. It also pointed out that the daily take from Texas sources was greater than necessary to serve all nonjurisdictional Texas customers, and that the direction of the gas flow on the Texas part of the system was away from the Southwest Zone and into the Central Zone. Likewise the flow from southern Louisiana sources was to nonjurisdictional customers in Louisiana and north into the Jackson Zone. The Commission noted it would take a major shutdown and flow reversal to cause any substantial flow of southern Louisiana gas into the Southwest or Central Zones.

As the examiner finds, there is a change in this pattern of operation today. The record shows that a large net flow still exists from the Southwest Zone to the Central Zone on the Agua Dulce and smaller lines and from the New Orleans to the Jackson Zone. However, it is now estimated that gas approximately equal to the other Southwest volumes would flow from the eastern part of the Southwest Zone, proposed to be called the Lafayette Zone, into the Central Zone on the new 30-inch pipeline during 1963 and that with additional capacity this flow would be greatly increased in the 1963-1964 heating season. There is also estimated a heavy flow from Bayou Sale in the New Orleans Zone into the proposed Lafayette Zone on the new 30-inch interconnection, and there is a relatively small flow (that has existed from 1950) from the Jackson Zone into the Central Zone on an 18-inch line. The record shows that the flow in the new 30-inch line from southern Louisiana into the Central Zone at Sterlington is to meet deficiencies in the supply of gas to the Central Zone customers and is an essential part of United's operations.

In the light of these developments a number of methods for allocating United's costs were proposed by various parties to the proceeding. United itself proposed a variant of Method 8 by establishing the separate Lafayette Zone shown on the map in Appendix 1 hereto, which was formerly a part of the Southwest Zone. United points out that gas flows from the New Orleans Zone to the proposed Lafayette Zone and, together with additional volumes contributed by the Lafayette Zone, is transported on the new 30-inch line up to the Central Zone. Alternatively on rebuttal United merged the Lafayette and New Orleans Zones, thus in effect transferring what was Southwest Zone territory to the New Orleans Zone. As a further alternative United would combine the Central and Jackson Zones. We agree with the examiner that the establishment of a new zone or the shifting of territory is not justified at this stage in the development of the system, which is becoming more unified and will call for more departures from Method 8 in the future as indicated below.

---

[23] See *United Gas Pipe Line Co.*, 3 FPC 402; 13 FPC 398; 14 FPC 353, 406, aff'd as to allocation *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619 (CADC 1957), cert. den. 355 U.S. 904; 25 FPC 26, January 4, 1961.

The staff, on the other hand, departed from Method 8. It allocated purchased gas costs directly to those of United's nonjurisdictional sales in the New Orleans and Southwest Zones that were made from facilities that were considered to be intrastate and physically separate from United's interstate system. The staff then rolled-in jurisdictional purchased gas costs on a systemwide basis. Adjustments were then made to give effect to the lower cost of sales in the New Orleans Zone and the lower cost of transportation in the Central Zone.

While we favor rolled-in methods of allocation, in our opinion the United system has not yet developed to this stage. Any rates established in line with such a rolled-in allocation would be too disruptive of business relationships in view of the historical patterns. Therefore we do not approve at this time of the staff's proposed roll-in of costs, but we expect that future allocations of United's costs will trend in the direction of a complete roll-in. However, we find that the staff's method of separating the purchased gas costs of nonjurisdictional sales made from intrastate facilities in the New Orleans Zone and in the Southwest Zone (including the proposed Lafayette Zone) was appropriate, and we have carried out that separation as shown in Appendix 6 hereto. As can be seen, almost all of the nonjurisdictional sales in the New Orleans Zone are subject to the direct assignment of purchased gas costs, and the greater part of those in the Southwest Zone are also treated in this way. We think it a desirable principle of rate making that costs should be directly assigned whenever feasible, and cost allocation with all of its complexities should be employed only when necessary. As witness for the Eastern Interveners testified, jurisdictional customers should not be burdened by the costs of nonjurisdictional purchases which are not subject to regulation by the Commission.

United objects to this separation of purchased gas costs contending that the intrastate facilities from which these nonjurisdictional sales are made are not, in fact, separable (at least in the Southwest Zone), and, further, that it is inequitable to make a separation of purchased gas costs without at the same time making a separation of transmission costs. The record shows the intrastate facilities in the New Orleans Zone are entirely separate; the books are separate; and operations are carried on in partnership with another company. In the Southwest Zone the separation is less simple. It appears that a relatively small amount of gas sold under rate schedules on file with the Commission is necessary in addition to the gas from unfiled rate schedules to make the full amount of sales from the facilities designated by the staff as intrastate. Furthermore, some of the separated sales of intrastate gas in Texas are made from facilities that may carry interstate gas. In spite of these possible qualifications, in our opinion, the staff made a reasonable separation of facilities and sales in the Southwest Zone that largely reflects the company's operations and is a closer approximation to reality than conventional allocation. With respect to transmission costs we would assign these directly as well as the purchased gas costs, but on the record the transmission costs are not separable so as to permit their direct assignment.

Memphis asks that the Southwest Zone be expanded to include low priced gas from Eugene Island to the Bayou Sale Junction. This represents a further attempt to reserve certain gas supplies for certain customers and is inconsistent with the development of the system. In any case the need is obviated by the examiner's solution to the allocation problem discussed below, particularly the roll-in of the Central and Jackson Zones.

Interveners, Texas Gas, Mississippi River Fuel and UGI urge the retention of Method 8 on the ground that there is no reason to deviate from a method used in the past. We think that the operation of the new 30-inch line basically changes the operation of the system, and the method of allocation must accordingly be changed.

In the light of the contentions of the parties the examiner arrived at a method of allocation and adjustment of the rate levels that reflects the historical pattern of rates in the past yet gives effect to the changes that have occurred. The examiner would retain the separation of the present Southwest and New Orleans Zones. While he would not make the direct assignment of purchased gas costs to intrastate sales as prescribed here, he would determine costs separately for the two southern zones and carry the costs forward to the two northern zones, Central and Jackson, and he would roll-in the purchased gas costs for these two zones. This properly reflects the fact that the Central Zone is receiving large amounts of gas from the New Orleans Zone via the new line and will receive larger amounts in the future.[24] We shall adopt the examiner's roll-in of the two northern zones as a logical outcome of the development of United's system. We shall extend this allocation to transmission costs as well as purchased gas costs, because the two northern zones are both becoming dependent on the producing regions of both southern zones. In performing the allocation we think that the two zones should be rolled-in before an allocation is made to jurisdictional and nonjurisdictional customers since it is our intention to treat the two northern zones as one.

While strictly a matter of rate design, the examiner's treatment of the rate levels in the Central and Jackson Zones should be considered in connection with his method of allocation. He found, we think with ample justification, that a differential between the two zones was necessary, for a roll-in of purchased gas costs with no price differential would increase the Central Zone rates by some six million dollars a year. In order to avoid this disruptive result he adopts a price differential of 3.5 cents in the commodity component of the rate to give weight to both cost and historical considerations. Furthermore, in order not to make a sudden change in prevailing rate patterns, he would leave the presently effective Central Zone rates in effect and apply all decreases in the cost of service, including reductions in purchased gas cost, to the Jackson rates until the 3.5-cent price differential is reached. We will adopt his differential between the zones, which, in our judgment is appropriate although we are aware that certain of the interveners contend it is too much and others contend it is too little. However, we do not adopt the examiner's conclusion that the presently effective Central Zone rates should remain in effect, and that the 3.5-cent differential should be reached only as a result of reductions in the cost of service. The amount of such reductions is unknown, and we think that a definite differential should now be put into effect representing a reduction in the present differential between the zones.

---

[24] A large part of this New Orleans Zone gas is low priced gas from Eugene Island through Bayou Sale, but some gas does come south to the junction point at Bayou Sale from Duck Lake. At any rate the low priced gas formerly went into the Jackson Zone and presumably is only available to the Central customers because the Jackson customers take larger amounts of other New Orleans Zone gas.

In our opinion the 3.5-cent differential represents a reasonable step in this transition period toward a more complete roll-in of United's costs. We note, furthermore, that the differential was around 3 cents in accordance with the Commission's approval of settlement rates in 1954,[35] but later filings have shown higher differentials ranging up to 8.00 cents per Mcf. More recently, however, these differentials have shown a tendency to decrease, reaching 5.76 cents in United's filing of substitute rates in RP63-1. Of course, settlement rates and filed rates are not evidence of what rates should be or differentials should be, but do indicate economic trends. The record here shows that the differential increased in response to the flow of higher priced southern Louisiana gas to the Jackson Zone, and decreased more recently because of the flow of southern Louisiana gas to the Central Zone and because of the tendency of gas prices to level off.

In conclusion we believe adoption of the examiner's approach as reflected in Appendices 2 and 6 attached gives weight to the methods of allocation used by us in the past, and to the changing pattern of operations. There is nothing to show that it will cause loss of United's nonjurisdictional business in Texas or will upset customer relationships in the two northern zones. It is to be understood that it is not the final word in the allocation of United's costs. In a future proceeding the United system may be found to be even more an integrated network than it is now. At that time a more complete roll-in of costs may be appropriate. As oft said, "The problem is to allocate to each class of the business its fair share of the costs. * * * Allocation of costs is not a matter for the slide rule. It involves judgment on a myriad of facts. It has no claim to an exact science." *Colorado Interstate Gas Co.* v. *F.P.C.*, 324 U.S. 581, 588.

RATE DESIGN

Having determined the differential between the Central and Jackson Zones the principal question remaining in connection with rate design concerns the proper levels of the demand and commodity charges in those zones. This rate design question is important because a low demand charge with a correspondingly high commodity charge may cause a pipeline, or its resale customers, to lose large industrial customers, which take gas at a high load factor. On the other hand too high a demand charge will place too great a proportion of a pipeline's fixed charges on the low load factor customers and ultimate consumers while the industrial users will benefit at their expense. Since 1955 United's demand charge to its pipeline customers in these two northern zones has approximated its fixed costs, while the commodity charge has approximated the variable costs.[36] On the other hand the town border sales[37] have used comparatively high commodity charges. In the present proceeding United would continue to load the fixed costs heavily on the demand component of the rate. Certain interveners strongly object. The City of Memphis, for instance, would have us design rates strictly in accordance with the allocation of costs following the formula in the *Atlantic Seaboard* case, 11 FPC 43, 52–57 (1952).

---

[35] *United Gas Pipe Line Co.*, 13 FPC 398, 406.

[36] In the Central Zone under United's Rate Schedule PL–C the customers are Texas Eastern, Texas Gas, Mississippi River Fuel, Southern Natural and Natural Gas Pipeline, and in the Jackson Zone under Rate Schedule PL–J the customers are Texas Eastern and Southern Natural.

[37] Rate Schedules DG–C and DG–T in the Central Zone and DG–J in the Jackson Zone.

The staff and Laclede, a customer of Mississippi, take intermediate positions. The examiner, after considering the circumstances of the case, generally followed the staff position and arrived at rates close to those proposed by the staff. We agree with the same approach, but the rates we determine differ with those of the staff because of our different cost of service and allocations.

More specifically United and the staff propose the following rates based upon their respective cost of service and allocations in RP63–1:

	United		Staff	
	Demand	Commodity (cents)	Demand	Commodity (cents)
PL–C	$1.43	16.54	$1.03	18.26
PL–J	1.44	22.27	1.03	21.40
DG–C, DG–T	.35	22.7	.45	20.62
DG–J	.365	29.3	.45	23.62
G–C	----------	27.0	----------	25.05
G–J	----------	33.8	----------	28.05

The examiner would adopt staff's proposed rates except to use the $1.03 demand charge in the Central Zone with a commodity charge of 18.16 cents based on United's billing units with the 1962 test period as adjusted. Laclede advocates an 81-cent demand charge and 18.94-cent commodity charge, while Memphis, in the most extreme position, proposes a demand charge of 54 cents and a commodity charge of 20.39 cents.[28]

It seems clear to us that the demand commodity relationship proposed by Memphis is not appropriate in these proceedings. While it represents the standard set forth in the *Atlantic Seaboard* case, *supra*, it has generally been necessary because of the circumstances of competition to establish a balance between the demand and commodity factors differing from that advocated by Memphis. See *American Louisiana Pipe Line Co.*, 29 FPC 932, 937, Opinion No. 387; *Natural Gas Pipeline Company*, 28 FPC 730, Opinion No. 367; *Midwestern Gas Transmission Co.*, 21 FPC 653. The factual requirements for a different demand-commodity balance likewise exist in the present case.

In the first place, beginning with the rates filed in 1955 in Docket No. G–9547, there has been a considerable history of the PL-C commodity rate being set at a level based upon the variable costs rounded upward, and the proposed rates in the present docket were computed on the same theory. Furthermore, United is in competition with other pipelines and producers from whom its customers purchase gas. Its customers require low commodity charges in order to design their own rates so that they and their customers may obtain and keep interruptible sales. In addition to these factors United's gas purchase contracts, as we have seen, contain take-or-pay requirements that have required United to pay for gas not taken. While the exact behavior of United's customer cannot be predicted, the testimony shows that a relatively low commodity charge will have the effect of encouraging United's pipeline customers to take more gas from United, but a relatively high commodity charge might intensify the problem.

On the other hand the record does not support the high demand component proposed by United. We agree with the examiner that it is significant that the commodity rates charged by eight other pipelines in the area, except one,[29] are all higher than the 18.16-cent PL-C rate proposed by the examiner and prescribed by us. In fact the record indicates that United has not lost any pipeline customers during the 1960-1962 three year period, although there were losses of industrial customers to producers. While the record shows that United's annual sales volumes declined in 1960 and 1961, it was estimated that they would increase in 1962, 1963 and 1964. Also it appears that United would take 100 percent of its minimum take-or-pay contract quantities under its gas purchase patterns, which we have adopted here, and that by the end of 1965 should make up all of its prepaid gas. In light of these predictions we agree with the examiner that some increase in the commodity component of the PL-C rate is possible without serious loss of sales.

---

[28] The above figures are not all on a consistent basis, and so must be taken more as illustrative than exact comparison. Further, neither Laclede nor Memphis concede United's claimed costs used by them for the rate design figures.

[29] Texas Eastern whose sales do not appear competitive since Texas Eastern itself purchases gas from United.

In view of these considerations we have designed pipeline rates for United that depart from those proposed by United on the one hand and Memphis on the other. We think the balance at which we arrive will prevent loss of sales on United's part without placing an unnecessary burden on domestic and commercial ultimate consumers. However, we think that future purchased gas price reductions and other reductions should go to reduce the demand component, for the large increase in United's demand component that has occurred in successive filings does not reflect a corresponding rise in the level of fixed costs. However, we think that the demand component of the pipeline rates need be reduced no lower than $0.97, before further reductions be applied to both demand and commodity, and United's other rates. This level reflects the demand-commodity relationship approved by the Commission in the settlement of rates in 1954 in Docket No. G–1142 (13 FPC 398, 406).

The examiner had made certain adjustments in the design of United's DG rates applying to large volume distributors and the G rates applying to the small volume distributors. We adopt the examiner's discussion as a reasonable accommodation of the rate schedules to the record in this case. However, the point has been raised in connection with the adjustment of the DG rates as well as with the upward adjustment of the commodity component of the PL-C rate, which results in an overall increase to Texas Eastern, that under Section 5(a) of the Act we have no authority to order rate increases. That is so, but we may determine appropriate differentials in rates and authorize the pipeline company "to balance its revenues." *Interstate Power Co. v. F.P.C.*, 236 F. 2d 372 (CA8), certiorari denied 352 U.S. 967.

Apart from the levels of the rates themselves United's PL rate schedules include a 72 percent annual minimum take-or-pay provision plus a daily 40 percent minimum bill provision which requires its customers to take 40 percent of the maximum daily contract quantities each day or pay for that minimum quantity of gas. The examiner does not disagree with the provisions in themselves, but he is concerned that a pipeline customer may be penalized for the same failure to take gas under each of the provisions. He therefore would amend United's tariffs so as to deduct any payment made under the daily deficiency provisions from annual deficiencies. We agree with United that both provisions should apply, for it is important to United's operations both that the daily swings not be too great and that the customer take gas at close to the annual contract rate. If a customer was not able to take the required annual quantity, it might permit daily swings deleterious to efficient pipeline operation knowing that one penalty would offset the other.

REFUNDS AND RATE REDUCTIONS

As is authorized under Section 4(e) of the Gas Act the examiner ordered refunds from January 1, 1963, to reflect the rate reductions resulting from his determinations. We shall likewise order refunds here. In this connection

United points out that its substitute rate filings made on December 19, 1962, actually call for an increase of rates in the Central Zone in the amount of $3,642,306, but a reduction of $2,000,911 in the Jackson Zone.[30] United argues, in effect, that under Section 4(e) it should be required to make refunds only in connection with the rate schedule filings calling for increases. We do not agree with the company.

In this proceeding United filed revisions of all its rates in the Central and Jackson Zones, and these were all suspended by the Commission's order of July 27, 1962, and the use thereof deferred until January 1, 1963.[31] As recited in the Commission's order United relied on systemwide factors in supporting the need for an increase. These included a claimed increase in the cost of purchased gas, increased costs due to new facilities and the need for a 6.5 percent rate of return. By its order the Commission entered into a proceeding involving the general investigation of United's rates and their underlying justification with respect to costs, allocations and rate design when United made its rate filing with the object of increasing its revenues. To the extent these revenues were excessive after the rates became effective subject to refund, refund should be made whether a particular rate schedule represented an increase or a decrease. Otherwise United might earn more than the agreed upon rate of return of 6.5 percent from January 1, 1963, to the date of this order.

Section 4(e) is not inconsistent with this interpretation. There we are authorized to order a natural-gas company "to refund, with interest, the portion of such increased rates or charges by its decision found not justified." There is nothing to show here that a general rate increase must be split into separate rate schedules, and that those separately representing decreases must be exempt from the refund provisions, even though the rates involved are as unjustified or more unjustified than the rate involved in those rate schedules separately representing increases.

Procedurally, we shall require that United file rate changes to reflect the rates prescribed herein for the calendar year 1963. For succeeding years we shall require that United file further rate changes to reflect the decrease in the corporate income tax rate (50 percent in 1964 and 48 percent thereafter), reductions in purchased gas costs including reductions arising from the *Union* case in Docket No. G-13811, and final allowance of tax deductions for gas prepayments. We shall require that United make refunds to its jurisdictional customers of the difference between what it charged and what it would have charged under the prescribed rates as adjusted for the above factors. Where United receives refunds from its producer suppliers, we are requiring that these flow through to its customers. Likewise, where United's jurisdictional pipeline customers receive refunds from United, we shall require that these customers, all of which are parties to this proceeding, shall pass these refunds on to their customers, and we shall require that successive customers who are subject to our jurisdiction shall in turn pass the refunds on to their customers.

DUE PROCESS IN THE EXCLUSION OF EVIDENCE

Mississippi River Fuel and Southern Union allege that the Commission's procedural order of August 6, 1963, and the refusal of the examiner to allow them to present certain evidence claimed to be a defense to the issues raised by staff and interveners represents a denial of due process and a violation of Section 7(c) of the Administrative Procedure Act, which provides that every party shall have the right to submit rebuttal evidence.

---

[30] United also points out that by filing made March 18, 1963, it reduced effective as of January 1, 1963, its northwest Mississippi rate schedules by $106,457 annually although they were not involved in this proceeding.

[31] Substitute sheets were accepted for filing by the Commission's order of January 17, 1963.

The Commission's order of August 6, 1962 (28 FPC 295) provided for a three-stage submission of evidence: (1) United was required to serve the filings and prepared testimony constituting its case-in-chief by August 21, 1962; (2) Commission staff and all other parties "proposing to present evidence" were to serve their testimony and exhibits by October 1, 1962; and (3) after a pre-hearing conference, the examiner would set a date for service by United for its rebuttal case.[33] After the submission of evidence by United and then by staff and interveners, Southern Union on November 16, 1963, mailed to the Commission and served on all parties testimony and exhibits to show errors in the evidence of staff and interveners. The examiner ruled that this evidence was inadmissible, but allowed it to remain physically in the record as an offer of proof, which however has not been subject to cross-examination by the parties.

Southern Union's proffered testimony discusses the importance of distance in allocating costs and introduces an exhibit (28–1) setting forth distances from supply point to sale point. The testimony criticizes the staff differential of 3 cents between the Central and Jackson Zones and, based on differences in cost (both costs of production and distance), recommends that the Central Zone be broken into a Northern Louisiana and a Texas Zone and that the differential between the Jackson Zone and the Northern Louisiana area be 4.5 cents per Mcf. The accompanying exhibit (28–2), based on costs presented by the staff, sets forth unit costs for the various zones and parts of zones. The testimony also states that if a change in Method 8 is necessary, it is appropriate that the old New Orleans Zone be expanded to be a Southern Louisiana Zone supplying both Northern Louisiana and the Jackson Zone.

Mississippi on October 1, 1962, served its prepared testimony and exhibit proposing that United's jurisdictional costs of service be allocated on the basis of Method 8 rather than the method of allocation proposed by United. During the course of the hearing, in order to show the effect of an increase in United's commodity charge proposed by a witness for Laclede Gas Company, Mississippi presented an exhibit (41) and explanatory testimony concluding that its losses under Laclede's proposed rates would amount to $1,250,084 a year. The examiner refused to admit this testimony and exhibit, which were included in the record as an offer of proof, but, like Southern Union's offer of proof, was not cross-examined by the parties.

At the end of the hearing Mississippi made a motion to put in additional testimony showing the impact of the rates and allocation proposed by the staff and the rate design advocated by Laclede. No offer of proof was made, and Mississippi did not indicate clearly the nature of the evidence that it proposed to submit.

We have reviewed these offers of proof, and note that most of the evidence contained therein is already in the record; further, we reject as unfounded the contention that these parties could not have anticipated that the "Method 8" allocation and rate design were issues in the proceeding. We do not, however, decide whether or not the examiner was correct in excluding this material. We note instead that our conclusions on allocation and rate design were premised on other evidence in the record, and the results we reach here would not have been altered in any way, had the offered evidence been received, and subjected to cross-examination. Thus, we conclude that even if the examiner erred in excluding these offers from evidence, these parties have not been prejudiced.

---

[33] This procedure was in general conformity with the Commission's later amendment of its rules to expedite pipeline rate proceedings, 18 CFR § 2.59 added by Order No. 257, Nov. 6, 1962.

The Commission further finds:

(1) United is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this order are sales of natural gas in interstate commerce and are subject to the jurisdiction of the Commission.

(2) The proposed increased rates and charges filed by United in the present docket and contained in First Revised Sheets Nos. 5, 7, 9-A, 9-B, 50, 67, 75 and 84, Second Revised Sheet No. 3, Fourth Revised Sheet No. 99, Fifth Revised Sheets Nos. 1 and 102, Sixth Revised Sheets Nos. 34, 35, 44 and 45, Seventh Revised Sheets Nos. 103 and 104, Eighth Revised Sheets Nos. 4, 6, 10, 12, 16, 18, 21, 23, 25, 27, 28, 30, 32 and 100, and Ninth Revised Sheet No. 101 to United's FPC Gas Tariff, First Revised Volume No. 1, either as originally filed on June 15, 1962, or filed as substitute sheets on December 19, 1962, have not been shown to be just and reasonable or otherwise lawful under the provisions of the Natural Gas Act, and should be disallowed.

(3) The just and reasonable rates and charges for United's sales of natural gas subject to this proceeding are those set forth in Appendix 7 hereto subject to adjustment and the further filing requirements described below.

The Commission orders:

(A) The proposed increased rates filed by United referred to in paragraph (2) above are hereby disallowed.

(B) Within 45 days from the date of issuance of this order United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission containing the rates set forth in Appendix 7 hereto effective January 1, 1963 through December 31, 1963. However, where the rates prescribed in Appendix 7 would result in rate increases to one or more customers, United is not required to file rate changes for such customers. It is, however, authorized to file increased rates for such customers up to the levels prescribed in Appendix 7.

(C) Within 45 days from the date of issuance of this order United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective January 1, 1964 through December 31, 1964, which should reflect the rates filed pursuant to paragraph (B) above and the following:

(i) A Federal income tax rate of 50 percent adjusted to reflect the effect of the consolidated return.

(ii) Any purchased gas cost reductions occurring up till the date of this order with respect to any producer rates included in the cost of service used herein and conditionally effective January 1, 1963.

(iii) Final allowance of tax deductions for gas prepayments if it occurred before the date of this order.

(D) Before January 31, 1965, United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective January 1, 1965, until changed in acccordance with the Natural Gas Act or in accordance with paragraph (E), which should reflect the rates filed pursuant to paragraphs (B) and (C) above and the following:

(i) A Federal income tax rate of 48 percent adjusted to reflect the effect of the consolidated return.

(ii) Adjustments listed in paragraph (C)(ii) and (iii) above if they become effective during the year 1964 after the date of this order and have not already been given effect.

(iii) Any reduction in the rates of Union pursuant to the Commission's remand in Docket No. G-13811, *et al.*

(E) If any of the factors listed in paragraphs (C) and (D) become effective in the calendar year 1965 or any year thereafter, before January 31 of the succeeding year United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective as of the beginning of the year of filing until changed in accordance with the Natural Gas Act or in accordance with this paragraph (E). The changed rates so filed should reflect the rates filed pursuant to paragraph (B) and the factors listed in paragraphs (C) and (D).

(F) The independent filing of new rates by United shall not terminate its obligation to file rates under paragraphs (D) and (E), but when such new rates have become final either as a result of a rate proceeding or approval of a settlement, the rate filing requirements of paragraphs (D) and (E) shall cease.

(G) Within 45 days from the date of issuance of this order United shall refund to its jurisdictional customers the excess of the total amounts charged and collected since January 1, 1963, over and above the amounts which would have been charged for sales to such customers under the rates prescribed by paragraphs (B) and (C), with interest at the rate of 7 percent per annum from the date of payment to United to the date of refund. In computing the refund it shall be assumed that the cost reductions referred to in paragraph (C)(ii) and (iii) be given immediate effect in United's rates.

(H) Before January 31, 1965 and each succeeding year United shall make further appropriate refunds if any are due to reflect the difference between what United charged and what it would have charged since January 1, 1963, had the cost reductions referred to in paragraphs (C)(ii) and (iii) and (D)(iii) been given immediate effect in United's rates.

(I) All refunds received by United from producers either before or after the date of the issuance of this opinion shall flow through to its customers until the rates herein prescribed (and as modified by further filings required) are superseded by subsequent rates either filed and allowed to become effective without suspension or finally prescribed or approved by the Commission as the result of rate proceedings or settlements. In carrying out this direction United shall accumulate such producer refunds and refund them in turn to its customers, without interest, at the time of refunds required in paragraphs (G) and (H).

(J) The pipeline customers of United and all successive customers of these customers whose rates are subject to the jurisdiction of this Commission shall refund to their customers all refunds received from United within 45 days of receipt of such amounts without interest. Such customers, if they object to making such refunds, shall file a protest with this Commission and before being required to make such refunds will be afforded a hearing. Within 30 days of making the refunds required by this paragraph (J) such customers shall report to the Commission in writing and under oath the manner of making such refunds.

(K) Within 30 days of making the refunds required by paragraphs (G), (H) and (I) United shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with copies of releases from each of its jurisdictional customers.

(L) Upon completion of the refunds as ordered in paragraphs (G), (H) and (I) to the satisfaction of the Commission, and the reporting pursuant to paragraph (K), the undertaking given by United to make refunds shall be discharged and the proceedings shall be terminated.

(M) If the question of the deduction of gas prepayments for income taxes has not been finally resolved at the time of issuance of this opinion, United shall establish a special reserve account on its books out of earned surplus and credit such reserve with the difference between revenues received and the revenues that would have been received if the prepayments added to working capital had been reduced by the taxes saved as a result of deducting such prepayments for income tax purposes. This reserve account shall be terminated upon paying the full amount of refund associated with the reduction in cost of service as a result of allowance of the tax deduction of prepayments.

(N) The examiner's decision issued June 17, 1963, herein to the extent not inconsistent herewith is hereby adopted as part of this opinion and order.

(O) Exceptions not granted herein are hereby denied.

COMMISSIONER O'CONNOR *concurs* except to the extent that this opinion and order is in conflict with his views with respect to the issue of consolidated taxes as expressed in the dissenting opinion in *Cities Service Gas Company*, Docket No. G-18799, 30 FPC 158, 171.

COMMISSIONER WOODWARD *concurring in part* and *dissenting in part*, *infra*, p. 1217.

WOODWARD, Commissioner, *concurring* in part and *dissenting* in part:

In this precedent pipeline rate proceeding, the Commission is charged with the responsibility of making a determination which will produce two separate but mutually dependent results:

(1) The finding of just, reasonable and non-discriminatory rates for United Gas Pipe Line Company's (United) jurisdictional customers and,

(2) The retention, by United, of reasonable revenues to cover operating expenses and capital costs of United's jurisdictional business.

The majority, in the decisional process, has disregarded fundamental ratemaking precepts and, for reasons discussed below, I must respectfully dissent.

The decision breaches this Commission's carefully conceived regulations regarding the test year and test year adjustments and runs directly contrary to settled administrative law respecting such regulations. By reason of the importance of these matters to a correct resolution of the issues involved in this proceeding and the significance of the determination of the majority as that relates to the test period, a more exhaustive treatment of this problem is necessary. To place the subject in proper perspective, a review of certain Commission orders and the purpose for which those orders were promulgated is mandatory.

Order No. 257, the most recent, amply circumscribes the subject.[1]

"For various reasons, full implementation and utilization of the procedures contemplated by that order has not been possible. The situation has now changed, however, particularly with respect to pipeline rate cases. The regulations relating to pipeline rate-increase filings have been recently revised (Order No. 254, issued September 20, 1962, amending § 154.63 of Regulations Under the Natural Gas Act, 28 FPC 495, 27 F.R. 9500). The revised section includes, among others, a requirement that the filings shall include more detailed data of such scope and format that they may serve as the company's case-in-chief."

---

[1] Natural Gas Pipeline Companies—Expedition of Rate Proceedings, Docket No. R-224, 18 CFR 2.59, 28 FPC 791, issued November 6, 1962.

"In view of these developments, the conditions have now been created which make it feasible and essential that the policy and procedures set out in Order No. 217 should now be fully and effectively used in pipeline rate proceedings."

We prescribed, *inter alia*, for future use, the meaning to be given to the term test period.[2] That Section requires that the filing shall be: " . . . based upon a test period which shall consist of a base period of 12 consecutive months of most recently available actual experience, adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of the filing, and which will become effective within nine months after the last month of available actual experience utilized in the filing, but in no event shall such test period extend six months beyond the date of filing."

And with respect to rejection the Commission ordered: "Where the data submitted in compliance with Paragraph (b) hereof do not comply with the requirements of the rules and regulations, the rate filing is subject to rejection: *Provided, however,* that if the proposed rate increase is filed at least 45 days before the effective date proposed therefor and such filing does not comply with the requirements of this section, the natural gas company will be notified of the deficiencies, and if such deficiencies are properly cured within 15 days from the date of such notice, the requisite supplementary material will be deemed to have been filed as of the same date as the initial submittal of the proposed rate increase."

There is no dispute that United's Notice of Change of Rate Filing made on June 15, 1962, utilizing a test period of twelve months ending March 31, 1962, adjusted to reflect operating changes and the resulting changes in costs and revenues through November 1962, was consistent with Commission regulations. Our order suspending the operation of that filing issued July 27, 1962, denotes such compliance. In fact, had the filing not been in compliance, it would have been and should have been summarily rejected.

Further, there is no doubt that even though United had based its filing on a period which conforms to the Regulations, any party, including the Staff, could have challenged United's selected period as the appropriate test period for comparing costs and revenues for rate making purposes. *The record contains no such challenge.*[3] Specifically, during the hearing, in response to a direct question posed by the Presiding Examiner as to whether there was any intention or possibility of changing the test period, Staff counsel responded:

> "No, sir, the test period here is the 12 months period ended March 31, 1962, *as adjusted for the following months ended November 30, 1962.*"[4]

Consequently, with the test period established, although the majority now repudiates this certainty, all data which properly may be admitted as evidence and considered in reaching a decision *must relate to that period.* Any other data is irrelevant and immaterial and must be rejected. Detailed scrutiny of the record and the Presiding Examiner's initial decision shows that the Examiner committed error in admitting any data with respect to operations, sales and costs which occurred after November 30, 1962. However, upon further reflection, the Examiner found that such data, "do not meet the requirements of the Regulations,"[5] and excluded from consideration "sales commencing after the close of the test-period."[6] The majority's error here is not only that it would admit the data but that it would consider such evidence in formulating its decision. Great weight must be given to the Examiner's pronouncement that "if rates are to be based on estimates of 1963 sales, United must be permitted to use estimated 1963 costs . . .", an additional area of controversy and a practice expressly forbidden by existing rules.[7]

---

[2] 154.63(e)(2)(i).

[3] Emphasis supplied throughout this statement unless otherwise indicated.

[4] Tr. 14.

[5] Examiner's Decision, page 1224.

At this point I would note that "Staff takes the position that Section 154.63 merely prescribes the necessary evidentiary support to be filed by a pipeline seeking the rate increase. . . ."[8] In such a way did Staff synthesize its case. The majority adopts this inventive rationale. Obviously the Staff's concept is in error and the majority compounds that error by lending integrity to such a misconceived notion for in order No. 254, *supra*, we clearly stated "it is intended that should a filing be suspended, the accompanying data could constitute the applicant's case-in-chief." The following is uncontrovertible: If the rules do not permit United filing sales and costs data for 1963, such data cannot possibly constitute United's case-in-chief; if United may not present such data as its case-in-chief, it is wholly inappropriate for the Staff, or any other party to present such data as rebuttal evidence, since it conflicts with the precise prescription in the regulations of the test period *which must be used.*

Findings based on evidence which is clearly in violation of Commission regulations creates serious substantive problems:

(1) What constitutes the proper sales volume to utilize in designing rate?

(2) What is the proper purchase gas cost to include in the cost-of-service?

(3) What is the proper system operating cost?

Each of these factors is vital to the determination of just and reasonable rates under the Natural Gas Act and our Rules and Regulations.

Concerning sales volumes, United in its original tender forecast its sales as 1,257 million Mcf which it later increased by 35 million Mcf when facilities to transport that increased volume were certificated. This action is consistent with Commission Regulations which provide "adjustments to experience, or estimates where 12 months experience is not available, may include the amounts for facilities for which a permanent or temporary certificate has been granted, provided such facilities will be in service within the test period, but such adjustments or estimates shall not include any amounts for facilities in respect to which a certificate of public convenience and necessity must be obtained but which has not been issued at the date of filing, nor shall adjustments or estimates include any amounts for other facilities associated therewith."

Staff submitted sales for the period from 1957 through and including 1964. It checked the data so obtained with certain data on file in United's certificate application[9] and conveniently concluded that United's estimated sales in 1963 would be 1,355 Mcf as set out in the application. Staff thereupon considers 1,355 million Mcf as the appropriate volume to use in determining United's rates. United, in its rebuttal case, (Exh. 16) asserted that its original estimate in the certificate proceeding was too high and revised the estimate to 1,344 million Mcf, although the company maintained that all the 1963 sales estimates were conjecture and their use violated Section 154.63 (E)(2)(i) of the Regulations. The Staff adopted that figure and utilized same in its brief. The

[6] Examiner's Decision, page 1226.

[7] Examiner's Decision, page 1226.

[8] Examiner's Decision, page 1224.

[9] Docket No. CP61-151.

Examiner rejected this computation stating it not only violated Commission Regulations but was too speculative and variable to use.[10] The majority, while not expressly passing upon these points, finds that 1,344 million Mcf of sales is appropriate to use in determining United's rates because this volume "can be handled by—test year facilities."[11] Careful research has failed to reveal any support for this perfunctory approach. All authorities require rates to be determined on the basis of the sales volumes made from the facilities and not the volumes which "could have been handled by the facilities."

With respect to sales adjustment to include the 1963 figures, the majority relies on the *Panhandle* case, 25 FPC 787 and the *El Paso* case, 22 FPC 260, to support its position. Such reliance is erroneous since those cases were adjudicated *before the present regulations became effective* and cannot be controlling in the instant proceeding, since this is the *first* case to be tried pursuant to the regulations. The majority, in effect, concludes that regulations conceived and promulgated by the Commission, although binding on others, are not binding on the Staff or the Commission. They have done nothing more than write the regulations out of the book.

Vitarelli v. *Seaton*[12] holds that the Secretary may not disregard regulations of the Department of Interior when such are properly promulgated, as is the case here. Justice Frankfurter for himself and three other Justices wrote in a concurring opinion, "An executive agency must be vigorously held to the standards by which it professes its actions to be judged. Accordingly, if dismissal from employment is based on a defined procedure, even though generous beyond the requirements which bind such agency, the procedures must be scrupulously observed. This judicial rule of administrative law is now firmly established and, if I may add rightly so. He that takes the procedural sword shall perish with that sword. . . ."

Judge George W. Anderson, a highly respected member of the First Federal Circuit Court of Appeals during the 1920's stated this principle forcefully: "Now if there is one thing that is established in the law of administration, I take it that it is that a rule cannot be repealed specifically to affect a case under consideration by the administrative authorities; that is, if there is an existing rule which protects certain rights, it violates every sense of decency, which is the heart of due process, to repeal that protection, just for the purpose of accomplishing the ends of the case which come before the administrative authority."[13]

The *Vitarelli* case, *supra*, is supported by other recent Supreme Court decisions. *Service* v. *Dulles*[14] holds that while the Secretary was not obligated to impose upon himself the vigorous procedural standards he had embodied in the regulations, "he could not, so long as the Regulations remain unchanged, proceed without regard to them."[15] In addition, in *Accardi* v. *Shaughnessy*,[16] the court holds that the Attorney General may not ignore his own validly prescribed regulations, *Erie R. Co.* v. *City of Patterson*[17] finds that affected parties "had the right to expect" that the board conduct its affairs "as its own rules required."

[17] 76 A. 1065 (1910).

Professors Gellhorn and Byse in their recent treatise on Administrative Law[18] summarize cases of this nature by declaring:[19] "The rationale of the decision seems to be that the existing regulations have "the force and effect of law and must therefore be deemed binding on the government as well as on the citizen, or that they embody a de facto recognition of minimum standards of procedural decency and may therefore be roughly equated with due process."

Without question, the Rules and Regulations that we promulgate as binding upon those parties appearing before us, are also binding upon this Commission and its Staff. This truism is immune from an answer to the contrary. Sound interpretation of the Rules and Regulations require the exclusion of the 1963 sales volume data. Substantive effect of such action would be changes in the purchase gas cost, the cost-of-service, the demand and commodity billing units and the resulting revenues. I do not deem it necessary to discuss each point individually. It is sufficient to say that the factors above do not, under our Regulations, and under the authorities listed herein, have the integrity upon which reasonable men may rely in resolving an issue as technically difficult as the setting of just and reasonable rate for a natural gas company.

On this issue, I would affirm the Presiding Examiner who has:

(A) Correctly stated the facts of record.

(B) Correctly set out the principles which prescribe a proper test period and the adjustments thereto.

(C) Correctly interpreted Commission regulations as they apply to the test period.

(D) Properly excluded adjustments which are at variance with the regulations in issue.

Only brief mention need be made of the issue concerning the consolidated tax question. The majority continues to defy the precise intent of Congress in granting the privilege of the consolidated return to an affiliated group of corporations. The law has wisely refrained from imposing a statutory requirement of assigning or distributing consolidated tax liability among members of the affiliated group. Hence a method of allocation adopted for the intersé purpose of the group is solely an internal affair. Each affiliate, including the parent, should accrue its tax liability as if its returns were filed on a separate basis. The reasons given in my dissenting opinion in the *Cities Service* case[20] are equally applicable here and I so intend them to be.

I must dissent to the majority's allocation of United's cost of service. It is a fact of record that United is an exception to the accepted system-wide rolled-in method of allocating costs because United essentially operates two separate systems.

The record also supports the proposition that this condition may be in the process of change. However, costs must be allocated consistent with operations as realized during the test year, not as operations may be at some time in the future as the majority deems appropriate.[21]

I dissent also from the principle of separating out purchase gas costs of the non-jurisdictional sales in the New Orleans and Southwest Zones. The majority finds such sales are made from non-jurisdictional facilities. In spite of this they state:[22] "It appears that a relatively small amount of gas sold under rate schedules on file with the Commission is necessary in addition to the gas from unfiled rate schedules to make the full amount of sales from the facilities designated by the Staff as intrastate. Furthermore, some of the separated sales of intrastate gas in Texas are made from facilities that carry interstate gas." As I understand pipeline operations, facilities from which interstate gas sales are made are interstate facilities. Nonetheless, the majority finds it appropriate to separate out such "non-jurisdictional" gas cost from "jurisdictional" gas cost. Such assignment of costs is not based upon operating facts; in essence it is distinctly contrary to operations.

---

[19] *Supra*, p. 862.

[20] Cities Service Gas Company, Docket No. G-18799, Opinion No. 396 and accompanying Order, issued July 15, 1963, 30 FPC 158.

[21] *Supra*, P. 1195–1197.

[22] *Supra*, P. 1197.

Although the majority separate non-jurisdictional purchase gas from jurisdictional gas cost, it does not follow this through and logically separate out the costs of operating facilities transporting non-jurisdictional gas from jurisdictional gas. Rather it rolls-in all transmission costs. This is an inconsistency which can result only in a distortion of federal regulation and makes orderly state regulation difficult if not impossible. "The mandatory separation of intrastate and interstate costs and revenues for state regulatory purposes is well established."[22] The majority's costs assignment does not permit obtaining either a true cost of interstate or intrastate business.

I concur with statements in the majority opinion which are not inconsistent with the views expressed herein.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON A FILING FOR AN INCREASE IN RATES

(Issued June 17, 1963)

Levy, *Presiding Examiner*: This proceeding involves a rate filing by United on June 15, 1962, to be effective August 1, 1962, seeking an annual increase in the rates and charges to United's jurisdictional customers of approximately $5,600,000. By Commission Order of July 27, 1962, these rates were suspended until January 1, 1963. Producer price reductions by United's suppliers resulting from pending proceedings reduced the substitute rates that actually went into effect on January 1, 1963, to a net increase in annual revenues of approximately $1,641,395.[1] The increased rates are subject to an undertaking to refund amounts not found justified under the Act.

On August 6, 1962, the Commission prescribed procedures designed to expedite the hearing and shorten the period between the suspension of the proposed rates and the issuance of a final Commission decision. Pursuant to these procedures, United served its direct case-in-chief by August 21, 1962, Staff and interveners served their proposed testimony and exhibits by October 1, 1962, and a prehearing conference was held on October 22, 1962, at which the issues were defined in detail, a date set (November 19, 1962) for the filing of United's rebuttal case, and for the commencement of the hearing on November 27, 1962.

Hearings conducted under the Commission's accelerated pipeline rate procedure (See Section 2.59 of the Commission's Rules of Practice and Procedure) commenced on November 27, 1962, and were concluded on January 28, 1963. The record made in this hearing includes 4683 pages of transcript, 51 exhibits and numerous items of incorporation by reference. Eighteen initial briefs[2] were filed pursuant to the Commission's order of February 6, 1963, on or about March 14, 1963, and as many reply briefs on or about April 3, 1963. The order emphasized the Commission's objective—"that final decision herein should be reached as expeditiously as possible," and the necessity of expediting all other phases of the proceedings including briefs, initial decision, and exceptions in order to achieve that objective. Accordingly, this initial decision is concerned with the resolution of the contested issues presented by this record and a determination of the applicable principles. Computation of a precise dollar cost of service is deferred until purchase gas costs and certain tax data are available as hereinafter set forth.

---

[22] *United Gas Pipe Line Company v. Louisiana Public Service Commission.* 130 So. 2d 652.

[1] An approximate increase of $3,642,306 in the Central Zone and a reduction of $2,000,911 in the Jackson Zone.

The major issues presented are:

1. The proper test year sales volumes and the proper level of operating expenses associated with such sales;

2. The Federal income tax allowance component of United's cost of service including issues as to the treatment of the investment tax credit, prepaid gas, liberalized depreciation, guideline depreciation rates, and the consolidated tax rate;

3. Allocation of United's cost of service including the extent to which the present zone by zone method of allocation, and rate differentials between zones, should continue to be used;

4. Rate design including the level of the demand-commodity components of the proposed rates and the daily take-or-pay provision in United's pipeline rate schedules.

The parties are agreed that 6.5% is a fair rate of return in this proceeding (Tr. 1267, 1370–3). The parties are also agreed that United's rates are subject to adjustment to reflect the final determination by the Commission of purchase gas costs to be included in United's cost of service.[3] United and the Staff presented a complete cost of service case, including testimony on cost allocation and rate design. The interveners presented evidence on specific issues of interest to them; Memphis on Federal income tax allowance; Mississippi River and Texas Gas on cost allocation; Laclede on rate design, and UGI on cost allocation and rate design.

Cost of Service

United and Staff presented a complete cost of service study. Testimony on cost of service issues was also presented by Memphis. There are substantial differences in the cost of service proposed, principally in the amount to be included in the rate base for United's Federal income tax expenses, purchase gas cost, prepaid gas, and estimated operating expenses. There is also a difference of opinion as to the proper test period to be used in this proceeding in computing sales volumes, costs, and revenues.

---

[2] Those filing briefs include: Staff, United Gas Pipe Line Company, Texas Eastern Transmission Corporation, Southern Natural Gas Company, Mississippi River Fuel Corporation, Laclede Gas Company, Texas Gas Transmission Corporation, Southern Union Gas Company, Louisville Gas and Electric Company, Natural Gas Pipeline Company of America, Mississippi Valley Gas Company, Western Kentucky Gas Company, Indiana Gas & Water Company, Inc., Industrial Consumers and Louisiana Public Service Commission, Willmut Gas and Oil Company, City of St. Louis, Missouri, Louisville Public Service Commission, Memphis Light Gas and Water Division, and Eastern Interveners (Public Service Electric and Gas Co., Brooklyn Union Gas Co., Philadelphia Gas Works, United Gas Improvement Co., Long Island Lighting Co., and Consolidated Edison of N.Y.).

[3] United is not in disagreement with the principle that any such post-determination by the Commission of conditional gas costs included in United's cost of service be reflected by flow-through, and United's suggested findings include a provision to this effect. [United's initial br., p. 23].

Test Year

United filed this application on June 15, 1962, with a base period of twelve months ending March 31, 1962. The base period was adjusted to reflect changes in revenues and costs effective within eight months or prior to November 30, 1962. Staff contends that the test period should reflect estimates for the calendar year 1963, on the ground that United's actual sales and revenues for the base year should be increased to reflect the larger capacity of its normalized plant. Staff relies on a 1963 sales forecast submitted by United in Docket No. CP61–151, a certificate proceeding filed by United to obtain approval for the construction of its new north-south Louisiana 30″ line. Staff witness Robertson, in addition to utilizing United's forecast of 1963 sales, conducted an independent study of the trend of sales over the period 1957-1964, inclusive. This led him to the conclusion that 1963 sales would reach 1355 billion cubic feet rather than the 1257 billion cubic feet contained in United's original filing. As part of its rebuttal evidence in this proceeding, United submitted a revised estimate (1344 billion cubic feet) of 1963 sales volumes prepared by witness Comer (Exh. 16) based on current customer estimates. Staff also relies on the less than 1% difference (0.84%) between the two United estimates as a confirmation of the validity of utilizing 1963 sales forecasts in its sales volume adjustment for the test period.

During the hearing United revised its sales volumes by 35,000,000 Mcf of increased sales authorized to commence in November 1962, just prior to the close of the prescribed test period, raising estimated sales volumes to 1292 billion cubic feet (Exch. 11–3). It maintains that all the 1963 sales estimates are speculative and their use violates Section 154.63(e)(2)(i) which requires the filing to be:

> . . . based upon a test period which shall consist of a base period of 12 consecutive months of most recently available actual experience, adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of the filing, and which will become effective within nine months after the last month of available actual experience utilized in the filing, but in no event shall such test period extend six months beyond the date of filing.

The Staff takes the position that Section 154.63 merely prescribes the necessary evidentiary support to be filed by a pipeline seeking the rate increase, and that the only issue is whether the sales forecast for 1963 is reasonably accurate. Rates for the future, emphasizes the Staff, are not set for a single year but for an indeterminate period of future duration upon the basis of normalized conditions. Logically, therefore, the Commission could set rates for the future on the basis of future forecasts of investment revenues and expenses.

The game of rate making, if it is to achieve fair and consistent results, must be played according to the rules. Section 154.63 is based on the use of actual experience adjusted for known changes to occur within a stated period (November 30, 1942). As stated by Staff counsel at the prehearing conference, "the test period here is the period ended March 31, 1962, as adjusted for the following months ended November 30, 1962" (Tr. p. 14). The 1963 sales forecasts do not meet the requirements of the Regulations. Moreover, they are speculative and variable. As noted by United, 1962 sales forecast contained in Exhibit 79 of Docket No. CP61-151 exceeded United's actual experience in the calendar year 1962 by 41,405,831 Mcf. Customer estimates for 1963 utilized by Staff in its original presentation have now been abandoned for United's rebuttal customer estimates. Actual 1963 sales, when available, will undoubtedly differ from both forecasts.

In the matter of *Tennessee Gas Transmission Company*, Docket No. G-5259 (1957) the Examiner rejected the intervener's contention that 1954 test year sales and revenues should be adjusted upward to reflect increased volumes of sales which occurred in 1955. He emphasized the serious danger of introducing distortion into the test period relationships of plant, operating costs and revenues inherent in individual adjustments. The Commission noted that a central issue in the case was the sales volumes to be employed in determining Tennessee's cost of service. It stated in pertinent part: (18 FPC 428, 431)

> The interveners took the position that the company's actual sales and transportation volumes and revenues in the test year 1954 do not represent a reasonable and proper measure for rate making. Briefly, they contend that Tennessee's plant in service in the test year 1954 had a transmission capacity which would, by reason of increased volumes of sales, be more fully utilized thereafter than it was in 1954, and that Tennessee would thus be earning increased revenues which should be used to adjust its actual test-year revenues. . . .
>
> It is our judgment that in the practical business of fixing rates, we must proceed insofar as possible on the basis of the known facts of the actual operating experience of the pipeline company. A most salient segment of such experience are the facts respecting the company's sales and the revenues thus produced. These data provide a convenient and logical starting point and basis for a comparison with the company's costs. They afford for all cases a consistent point of departure firmly grounded in the actual results of operations, no matter what uncertainties may otherwise exist, or what adjustments may be indicated. This element of certainty is obviously important in a process as empirical as that of fixing rates, and is something *we are unwilling to discard by reliance on predictions or extrapolations from incomplete data of what future sales might be.* We have of course always permitted adjustments to costs on the basis of future changes which are definite and certain and properly related to operations in the test period. So also, there may be situations which would permit or require adjustments in the sales and revenues shown for the test year in a particular case. However, adjustments of the kind and character the interveners propose, are in principle and degree widely removed from anything we have ever heretofore permitted. Furthermore, as a practical matter, adjustments to sales of such extent and far-reaching effect as those the interveners propose would give rise to many problems and introduce an element of uncertainty and doubt wholly inconsistent with sound, practicable, and effective rate making.

One of the basic objectives of the new procedure for pipeline rate cases is to shorten the gap between the test year and the time decision is reached by the Commission. The applicant's rate filing, prepared in the form of exhibits and prepared testimony, was concededly in "substantial compliance" with the new procedure. (See Commission's Order of Suspension issued July 27, 1962.) If, however, supplemental material may be filed by any party unrelated to the prescribed test year, the resulting uncertainty will defeat the objectives of the expedited procedure and other parties in self-defense will find it necessary to file as rebuttal their own future sales forecasts and cost trends.[4] If rates are to be based on estimates of 1963 sales, United must be permitted to use estimated 1963 costs—an additional area of controversy and a practice expressly rejected by existing rules. There is no suggestion that the 1961-62 test year is stale or unsuitable.

An additional objection to the procedure followed by Staff herein is its use of a net plant balance as of the beginning of its 1963 test period for its rate base as a normalized net plant for future sales. This does not include 1963 plant additions amounting to $13,301,501 as shown in Staff's Exhibit 19–1 and United's Exhibit 13–2 which estimate 1963 net plant at $379,301,945. Future sales and expenses as estimated by Staff, therefore, are not matched with future plant and investment.[5] Accordingly, United's test year with known changes through November 30, 1962, will be used with a sales volume of 1,292,294,788 Mcf. This excludes sales commencing after the close of the test period.

Operating Expense Estimates

Staff and interveners do not dispute United's test period operating expenses exclusive of purchased gas costs. If, however, we utilize 1963 as the test period and sales volumes totalling 1,343,703,213 Mcf, there is a difference of $1,165,644 in United and Staff's cost estimates arising from substantially lower Staff estimates of the increased operating expenses other than purchased gas cost incident to the additional 1963 sales. This arises from the Staff's view that the additional costs incident to the large sales should be measured at a lower incremental unit rate, 0.7 per Mcf, rather than 2¢, the unit rate for the lower test year volumes. Since I have rejected the use of a 1963 test period, it is unnecessary to determine the applicability of system average unit costs to measure the so-called incremental costs applicable to the largest sales volumes predicted by Staff on the basis of the capacity of United's future plant. It should be noted, however, that Staff's predicted incremental rate is not based on actual operating expenses but on a statistical trend line treatment which results in a rate far less than the actual 2¢ unit rate shown by Staff Exhibit 21–1.

Eastern interveners maintain that United's estimate of its 1963 costs is in error by about $478,700 because an erroneous volume increment was used. Further errors in adjusted operating expenses include $349,237 for "Transmission and compression of gas" by Texas Gas (Exh. 1–87, Tr. 1208) and $224,514 (Exh. 2–1, p. 7, Tr. 1257–62) for new facilities.

Purchased Gas Costs

The cost of purchased gas represents 75% of United's cost of service.[6] United's filing on June 15, 1962 reflected the then existing price situation. The Commission's program of rate settlements in pending producer rate proceedings effected a $7,300,000 reduction in United's annual purchase gas costs by Decem-

---

[4] See *El Paso Natural Gas Co.*, Docket No. G–4769, *et al.* where the receipt in evidence of a new El Paso test year cost of service study (calendar 1961) was denied on the ground in part that it would have necessitated the preparation of further evidence by Staff and interveners and further substantially delayed determination.

[5] For investment credit tax purposes, the Staff assumes annual plant additions of $30,000,000 for 1963 and each year thereafter (Staff br. p. 55).

[6]

Cost of gas	$233,569,542
Total cost of service	312,441,695
Percent cost of gas to total cost of service	75%

(United br. p. 25)

ber 1, 1962, and before the substitute rates went into effect on January 1, 1963, there was an additional $1,379,146 of producer price reductions (Exh. 10–1). Accordingly, the substitute rates which went into effect as of January 1, 1963, resulted in a rate increase of $1,641,395 rather than the $5,606,291 proposed in the original filing on June 15, 1962, over previously existing rates in Docket RP61–18 (See tariff sheets, Item J by reference.) United recognizes that additional reductions may result from Commission action in the pending Union rate proceeding now before the Commission for decision,[7] and other producer proceedings, and has agreed to reflect by flow-through any such future reductions in its cost of purchased gas.

In addition to the price paid for the gas, the cost of purchased gas is influenced by the purchase pattern. United's net cost of gas purchased during the test year was 17.71¢ per Mcf (Exh. 3–16, p. 3). Under its adjusted gas purchase pattern covering estimated 1963 sales, this unit cost rises to 18.40¢ (Exh. 13–2, Sch. 4). This results from increased takes from higher-priced Southern Louisiana gas and an additional purchase gas expense of $9,270,000 based on 1963 estimates. Staff takes the position that United has not met its burden of proof to justify the increased operating expenses resulting from the proposed shift in gas purchase pattern from low-price Texas to higher-price Southern Louisiana gas, and that consequently United's claimed purchased gas cost should be reduced $1,814,000 to reflect United's base year purchase pattern in the allocated fields only. As noted by Eastern Interveners (Br. p. 18), the problem is essentially one of judgment. Witness Barnett testified for United that the determination of how gas from each of the many fields to which United is connected should be dispatched is made on the basis of achieving the most efficient use of the pipeline. This includes the exercise of managerial judgment in meeting the daily and annual requirements of United's markets in the light of 900 gas purchase contracts and the delivery limitations of more than 390 fields. Specific factors considered include:

(1) Capacity of gathering systems;

(2) Capacity of transmission lines;

(3) Availability of gas from the reserves under contracts;

(4) United's contractual 'take' obligations with the various producers,

(5) State conservation statutes and proration orders of the Railroad Commission of Texas, the Department of Conservation of Louisiana, and the Oil & Gas Board of Mississippi.

(6) The 'takes' of other purchasers within the field.

(7) Drainage conditions.

(8) Whether the gas is being produced from oil wells as casinghead gas or from stripper or limited capacity wells.

(9) Pipeline load factors. (United's br., p. 24).

I am not persuaded by the Staffs analysis that United's purchase gas pattern reflects a management decision that United ". . . is not interested in the average gas costs which result. . . ." (Staff Reply br. p. 41). The use of higher priced gas in its gas purchase pattern follows from the increasing use of higher priced Southern Louisiana gas in recent years (Tr. 102). The increasing use of these reserves is neither arbitrary nor discriminatory, nor is there any evidence in this record of excessive or imprudent acquisition.

---

[7] If United's purchases from Union at filed prices of over $18,000,000 are reduced to prices found proper in the initial decision, the reduction in United's purchase gas costs would be in excess of $7,000,000 (Exh. 23, Sch. 3).

Purchases From Union Producing Company

United included in its purchase gas costs approximately $18,600,000 paid to Union, a wholly owned gas producing subsidiary of United's parent, for approximately 131,000,000 Mcf of gas at an average cost of 14.2¢ per Mcf (Exhs. 2-15, 2-16). The prices used are based on currently filed rate schedules and contracts between the parties. To support the prices paid for Union gas, United put in a complete cost of service based upon Union's 1961 costs. Staff and interveners moved to dismiss the evidence of Union's costs on the ground that the lawfulness of the rates charged by Union to United was the subject of a pending Union rate proceeding in Docket No. G-13811. There the Commission had conducted a full-fledged independent producer rate hearing involving the actual cost of service of Union, including a determination of the costs incurred in producing gas sold to United. This Examiner granted the Motion to Strike United's proffered testimony and exhibits as to Union's costs (Tr. 1368-1371) on the procedural ground that the Commission has maintained an administrative separation between producer rate proceedings and pipeline rate proceedings and that the Union producer rate proceeding in which hearing had already been completed and an initial decision rendered provided the appropriate vehicle as a matter of sound administrative procedure for a determination of that portion of United's cost of service represented by gas supplied by Union.

United's brief urges that the Examiner erred on two major grounds: (1) that the justification for the prices paid by United to Union must be made in the pipeline rate proceeding under the doctrine of Mississippi River (*Mississippi River Fuel Corporation* v. *F.P.C.* 252 F. 2d 619) and (2) that even if such justification could be made in the Union independent producer rate proceeding, Docket No. G-13811 was tried upon a 1958 test year which is now stale, and which does not include the cost of all gas now purchased from Union.

The basic question here is how much should be included in United's cost of service because of its payments for gas to its producing affiliate, Union. The *Mississippi River Fuel* decision stands for the proposition that increases in the prices United pays to Union cannot be included in United's cost of service unless "some factual economic justification" is shown. Union's costs and the resulting prices paid by United must be justified. However, the *Mississippi River Fuel* decision does not hold that the justification for the prices charged by Union must be made procedurally in United's pipeline rate proceeding. It does stand for the proposition that the contract prices or filed rate schedules of Union cannot be directly translated into United's purchased gas costs in the current pipeline rate proceeding without any consideration of Union's costs. These costs are currently being determined in a full-fledged producer rate hearing involving the actual cost of service of Union, which is much further down the road towards completion than the instant proceeding.[8] The Commission is free to pass on the lawfulness of the rates of both Union and United in separate proceedings where, as here, it has found such a procedure practical, necessary, and appropriate in carrying out the purposes of the Natural Gas Act (See *Federal Power Commission* v. *Tennessee Gas Transmission Co.*, U. S. Supreme Court, dec. Dec. 3, 1962 (31 L. W. 4029) where the Court sustained the interim order procedure.) As noted in the Examiner's ruling at the hearing (Tr. 136,970).

> Ever since the Commission acquired jurisdiction over the rates of independent producers, it has maintained an administrative separation between producer proceedings and pipeline proceedings. . . : I am aware of

---

[8] The initial decision was filed June 26, 1962, and oral argument before the Commission was held April 26, 1963. [See 31 FPC 41.]

> the court's decision in the Mississippi River Fuel case that has been discussed by all of the counsel this morning, but nothing that I see in that decision precludes the Commission from making the economic determination which is there required in a producer rate proceeding rather than in the pipeline rate proceeding, so long as that determination of economic justification is made in a full and fair hearing.

When the Commission renders a final decision in the Union rate proceeding, the subsequently filed legal rates will reflect Union's actual cost of service and the amounts that United can properly include in its cost of service for gas purchased from Union. If Union believes that such rates are too low, it can file for a rate increase under Section 4(e). If it believes that the 1958 test period is stale and unrepresentative, it can move for a redetermination upon the basis of a later and more current test period or the Commission may direct United to do so on its own motion. The Commission's findings in the Union rate hearing will necessarily require a determination of Union's system-wide production and exploration costs for gas sold under filed and unfiled contracts, since the initial decision contains findings covering total unit costs incurred for each Mcf of gas produced.

Accordingly, I conclude that the Commission is not required to determine the "factual justification" for the prices paid Union in the current pipeline proceeding, but may utilize the Union producer rate proceeding now pending before it, on review of the Examiner's initial decision, for this purpose. Realistically, there must be a decision or settlement in the pending Union rate proceeding before there can be a final determination of gas purchase costs in this proceeding. The order will include, therefore, a rate condition making the Commission's decision as to Union's costs applicable here as of January 1, 1963, the effective date of United's filing (See Op. No. 379, *Southern Natural Gas Co.* issued February 18, 1963.) Similar provisions will be included to cover potential adjustments in pending producer settlements which may affect United's purchase gas costs in this proceeding (See *Gulf Oil Co.,* Docket No. G–9520, *et al.*) For these reasons, it would not be useful or productive to attempt a fixed dollar cost of service in this initial decision. The filed prices of Union and other producers as of January 1, 1963, are not the answer. The economic justification and cost basis for Union's rates are presently under examination by the Commission. Moreover, the Commission has recently held that the so-called "filed rate" doctrine does not relieve it of its power and duty to examine the economic justification for the rates charged by a subsidiary. *Northern Natural Gas Company,* Opinion No. 385, April 2, 1963, 29 FPC 689. As noted by United (initial br. p. 4) it is impractical to attempt to track the rapidly changing producer price situation with a multiplicity of rate changes, and the attempt to do so would only serve to delay an expeditious determination of the issues involved in this proceeding. Once the Commission has before it the governing principles which should be applied in the disposition of the issues presented by this record. the actual determination of a firm dollar cost of service, and the rates to be charged, involves only the application of arithmetic to such principles. In the prior United proceedings in Docket Nos. G–9547 and G–10592, the Commission by order dated August 6, 1959, specifically directed the Presiding Examiner to determine the governing principles to be applied (25 FPC 36). Accordingly, this initial decision will be concerned primarily with a resolution of the contested issues presented herein, and a determination of the principles to be used in arriving at a firm dollar cost of service. Various proposed costs of service are utilized for illustrative purposes so as to show the dollar impact of alternative theories of cost allocation and rate design.

Federal Income Taxes

The proper allowance for Federal income tax purposes in United's cost of service requires the disposition of five subsidiary issues relating to the effective tax rate, the investment credit, guideline depreciation rates, prepaid gas, and liberalized depreciation.

Effective Tax Rate

United's cost of service includes Federal income taxes in the amount of $12,099,662 calculated at the statutory 52% rate. Staff proposes that the Federal income tax component be reduced to $6,655,871 based on a consolidated effective tax rate for the tax year of 46.82% plus investment credit deductions. Memphis suggests a further reduction of such allowance to $3,923,208, or under certain alternative theories, to zero.

United Gas Corporation, together with its wholly-owned subsidiaries, United, Union, and Overseas, files a consolidated income tax return, as is its privilege under Section 1501 of the Internal Revenue Code of 1954, in lieu of separate returns for each company. Union had $8,722,362 of gross tax losses between 1957 and 1961 (Exh. 36, rev.) and a net total tax loss during this period of $3,869,326. This tax loss resulted from Union's use of the statutory percentage depletion allowance resulting from the exploration, development, and operation of its oil and gas properties. Union is not a regulated public utility within the meaning of the Federal income tax law (Tr. 490) and its sales of oil and other related products are unregulated and outside the jurisdiction of the Commission.

The effect of the consolidated income tax return during the years in which Union has a tax loss is to reduce the total income tax liability of all the affiliated companies, including United, below the total of what they would pay on a separate return basis. Staff and Memphis take the position that all of the affiliates should be treated as a single entity and the lower effective tax rate resulting from the consolidated return should be applied in computing the amount of Federal income taxes includible in United's cost of service.

United insists that it is entitled to apply the statutory 52% income tax rate unreduced by the utilization in the consolidated return of deductions and losses attributable to the unregulated, non-jurisdictional, and non-utility operations of affiliates. Losses resulting from unregulated, non-jurisdictional oil operations in particular should not be considered for rate-making purposes. Staff believes United is entitled to share equitably in the consolidated tax return savings produced by Union's tax losses on the ground that Union is United's integrated production arm and recovers its exploration and development costs through prices it charges its customers—prices ultimately borne by United's customers. Staff also relies on the doctrine of "taxes actually paid"[9]. United contends that its customers bore none of the expenses of Union's non-utility operations and are not entitled to have their rates reduced by virtue of Union's losses.

As noted by United, (Br. p. 53) the issue here is essentially the same as that now pending before the Commission in the matter of *Cities Service Gas Co.*, Docket No. G–18799, on exception from Examiner Kelly's decision dated April 23, 1962. There the Examiner allowed Cities Service to compute its Federal income tax component at the statutory 52% rate on the ground that the actual taxes paid doctrine, which requires any tax savings to be passed on to the consuming public, applies only to tax savings related to and derived from the regulated companies' jurisdictional gas business. Examiner Kelly's conclusions were concurred in approximately one month later on May 28, 1962, when Examiner Zwerdling in *Tennessee Gas Transmission Co.,* Docket No. G-19983, rejected the consolidated effective tax rate proposed by the Staff[10] which would have resulted in a lower tax rate through the utilization of losses incurred by non-utility and Canadian oil operations. The *Tennessee Gas* case has now been settled but the Cities Service case is pending before the Commission for decision. [See Tennessee Gas, 28 FPC 1100 and Cities Service, 30 FPC 158.]

---

[9] Citing *El Paso Natural Gas Co. v. F.P.C.*, 281 F. 2d 567 (1960) and similar cases.

The reasoning of the Examiner in both the *Cities Service* and *Tennessee Gas* decisions is persuasive and compels rejection of the Staff position that the income tax component should be reduced from 52% to the consolidated effective tax rate of 46.82% without regard to the character and source of the tax losses giving rise to the tax savings. The *El Paso* decision does not deal with the specific issue presented here—whether it is proper to reduce gas rates by utilizing tax losses applicable to unrelated non-utility operations. It does not follow, however, that the 52% statutory rate must be applied. United needs Union's losses to achieve any saving through the consolidated return. Conversely, the loss company needs United's profits to achieve a tax saving for the consolidated group. The necessity of a joint effort suggests the desirability of a division of the tax savings effected.

An effective tax rate of 49.51% produces an equitable division of the tax savings between the profit and loss companies involved in this proceeding. This rate is derived as follows:

First, we determine the total amount of taxable income for all companies in the consolidation having taxable income for the test year. The effect of this is to ignore the "loss" companies since they pay no tax. The total amount of taxable income of the "profit" companies is $122,056,630 for the 1957-61 period as derived from Appendix A-1[A] of the Memphis brief. We use an average of taxable income for five years from 1957 to 1961, in determining the effective tax rate in order to avoid the distortion that might result from the use of a single year.

We then apply the 52% statutory tax rate to the total amount of taxable income to arrive at the total tax liability. The same result would be accomplished if these companies having taxable income had filed separate returns and paid their taxes on the basis of the 52% rate. In the instant case, the application of the 52% rate to $122,056,630 results in an income tax liability of $63,469,447 which, of course, relates to the "profit" companies, or those having taxable income during the test year.

We then deduct the amount of the Federal income tax paid in filing the consolidated return, from the amount of the tax liability determined on the separate return basis. The difference thus derived represents the amount of the tax saving resulting from the filing of the consolidated return. In the case at hand, the amount of $57,386,940, representing the consolidated tax payment for the period 1957-61, is deducted from the amount of $63,469,447 representing the tax determined on a separate return basis for the "profit" companies, to arrive at the amount of $6,082,507 representing the tax saving.

---

[10] Staff's initial brief does not make reference to either *Cities Service* or *Tennessee Gas*. Its reply brief contains the following reference:

> United cites the Examiner's decisions in the *Cities Service* and *Tennessee Gas* cases as authority for its position on the consolidated effective tax rate issue. We point out, however, that there was a contrary Examiner's decision in the *Northern Natural* case which it has been unable to distinguish and that this issue is presently before the Commission for decision. [p. 31.]

Finally, we divide the tax savings. This is accomplished by first multiplying the tax saving of $6,082,507 by 50%, and then dividing the resultant figure of $3,041,253 by the amount of the tax figured on a separate return basis of $63,469,447, thereby arriving at a percentage of 4.7917. The 4.7917% is multiplied by 52% to arrive at another percentage of 2.492. This percentage of 2.492 is then deducted from the 52% statutory rate to arrive at 49.51% as the effective tax rate for application to the taxable income of United.

The dollar effect of an effective tax rate of 49.51% is shown by its application to the net taxable income of United presented in the exhibits of United, Memphis, Interveners, and Staff[B]. The resultant tax liability for United is reduced to $11,520,011, as compared with United's proposed tax liability of $12,099,662, or a reduction of $579,651, increased to $4,022,543, compared with $3,923,208, proposed by Memphis, an increase of $99,335; increased to $5,886,718 as compared with $5,452,481 proposed by Staff, an increase of $434,237.

Investment Credit

The Intent of Congress

The investment credit provision of the Internal Revenue Code (Sections 38, 46–48, 181, 381(c)(23)) became law on October 16, 1962, as part of the Revenue Act of 1962. The Act provides generally for a credit of 7% (3% for public utilities) of the cost of eligible depreciable property acquired and placed in service after December 31, 1961, against the Federal income tax otherwise computed. Use of the credit is compulsory beginning with tax returns covering 1962. The tax basis of qualified depreciable property is reduced under the Act by the amount of credit taken. United is eligible for the full 7% tax credit.

United's income tax allowance makes no provision or adjustment for reductions incident to the investment tax credit. In United's view, the investment credit is not a reduction of taxes but a reduction in the cost of acquiring depreciable assets. It reads the Legislative History of the statute as manifesting a clear intent to stimulate investment and encourage modernization and expansion by reducing the cost of acquiring new equipment rather than by a reduction of tax expense. Flow-through of the credit to United's customers, under this theory, would clearly defeat and frustrate the intent and purpose of the tax statute.

Staff and Memphis start from the premise that the investment credit is a tax reduction, that all tax reductions must be reflected by an appropriate reduction in the cost of service of a regulated pipeline, and that nothing in the Revenue Act of 1962, modifies this basic requirement of the Natural Gas Act. Staff states that "the Natural Gas Act does not afford the Federal Power Commission necessary administrative discretion to include, in the cost-of-service of a regulated pipeline, more than taxes payable" (Br. p. 63).

I do not subscribe wholly to either view. The investment tax credit, contrary to United's position, is more than a reduction in the cost of property. It provides an actual savings in taxes due and payable absent the availability of the credit.[11] The total impact of the credit includes both a reduction in the depreciation base of the assets acquired and an offset against the taxes otherwise due. This is made clear in a section of the Senate Committee Report explaining changes designed to prevent a depreciation deduction in excess of the reduced cost of the property acquired:[12]

---

[11] Perhaps the best characterization is the phrase "tax abatements" used by Secretary Dillon. "As Chief Financial Officer of the Nation, I do not lightly regard tax abatements on the scale proposed here." S. Rep. No. 1881, 87th Cong. 2d Sess. p. 11 (1962).

> Despite the substantial similarity of your committee's and the House versions of the investment credit, there are important differences. The most important of these is the reduction of the amount on which depreciation may be taken, in the case of assets eligible for the investment credit, by the amount of the investment credit allowable. Your committee believes that where a taxpayer purchases a $100 asset, for example, if $7 of this purchase price is to be allowed as a direct reduction in his tax in the form of a credit, this same amount should not be allowed to him again as a depreciation deduction in computing income subject to tax. In such a case the taxpayer's real contribution toward the purchase of the $100 property is limited to $93 and therefore it seemed appropriate to your committee to limit the depreciation recovery to this same $93.

Nor do I agree with the Staff view that the Natural Gas Act precludes the retention of any tax benefits by the taxpayer. A careful review of the investment tax credit amendment and its legislative history indicates that the regulatory treatment of the credit and its rate making effect were left open in the bill as finally enacted. Originally, the Administration's proposal for the credit specifically excluded regulated public utilities including natural gas pipelines. This was explained in a report entitled "General Explanation of Committee Discussion Draft of Revenue Bill of 1961" dated September 29, 1961, prepared for the Committee on Ways and Means by the Staff of the Joint Committee on Internal Revenue Taxation. The report gives the following basis for the exclusion of public utilities:[13]

> Public utilities were omitted from the base for the investment credit on the grounds that they are subject to regulations generally designed to limit the rate of return on investment after payment of tax on the grounds that their growth is largely determined by public requirements. [p. 9].

The bill that emerged from Committee and was reported to the floor of the House, however, H. R. 10650, included regulated utilities at a 4% rather than the full 8% credit. Natural gas pipelines were excluded from the definition of "regulated utilities" so that the full 8% credit was applicable. The House Committee report clearly contemplated the possibility that some of the benefits of the proposed credit would be flowed through to consumers:[14]

> The investment credit in the case of most regulated public utilities is in effect 4 percent rather than 8 percent. The smaller credit is provided in such cases because much of its benefit in these regulated industries is likely to be passed on in lower rates to consumers, thereby negating much of the stimulative effect on investments. Moreover, the size of the investment in regulated public utilities, such as electric companies, local gas companies, telephone companies, etc., will in large part be determined by the growth of other industries, rather than their own.[15]

H.R. 10650 was amended on the floor of the House so that the credit was reduced to 3% in the case of regulated utilities and 7% in the case of natural gas pipelines—the rate applicable to other eligible taxpayers. When H.R.

[13] Hearings before the Committee on Ways and Means, House of Representatives, 87th Cong., 1st Sess. 1530, 1537, 1564, 1567-70 (1961) (see United br. p. 78).

[14] H.R. Rep. No. 1447, 87th Cong., 2d Sess. 8 (1962).

[15] Hearings on H.R. 10650 before the Senate Committee on Finance, 87th Cong., 2d Sess. (Part 1) 87 (1962).

10650 was called up for hearing before the Senate Finance Committee, the Administration again urged that regulated utilities in the electric, gas, and communications field be excluded.

Secretary Dillon stated in respect of gas pipelines:

> The Federal Power Commission has informed us that the gas pipelines share the basic characteristics of these regulated utilities and would be treated for rate making purposes in the same manner. For this reason gas pipelines should be grouped with other regulated public utilities and be excluded from qualification for the credit.[16]

Nevertheless, the Senate retained the provisions of the Bill, as it passed the House, relating to the inclusion of regulated utilities, and in particular, natural gas pipeline companies.

During the debates on the Senate floor, opponents and supporters of flow-through in respect of the tax credit struggled to create a legislative history favorable to their point of view. Charles H. Mann, Treasurer of the Columbia Gas System, asked the Senate Finance Committee to include language in its report designed to prevent regulatory agencies from using the credit to reduce rates.

> First, it should not be assumed that the tax reductions resulting from the investment credit must be passed on to the customers of regulated utilities. The provisions purpose could be achieved with respect to utilities if the report of your committee made it clear that the objectives of the legislation would not be met if regulatory commissions insist that their tax reductions be treated as applicable to the year in which plant expenditures are made.
>
> The committee report should make clear that the investment credit is designed to supply capital for modernization and expansion of plant and is not intended to immediately reduce utility rates.[17]

These efforts were unsuccessful and the committee report does not contain any explicit language barring state and Federal regulatory agencies from a flow-through of the credit. The outcome was equally inconclusive for those who sought language requiring flow-through, although United does concede that "various statements were made which seemed to indicate a flow-through result was anticipated in the case of gas pipeline companies."[18] (United br. p. 77)

During these debates the late Senator Kerr, the Bill's able floor manager, defended the inclusion of gas pipelines for the full 7% credit on the ground they must be able to compete with alternative transportation systems, carrying other fuels, eligible for the full credit. In respect of whether the tax benefits would be retained by the pipelines or passed on to their customers, he observed:

> With reference to that section, I say to the Senator from Tennessee that the benefits would go to the consumers, not the gas pipelines. If the Senator from Tennessee were aware of the facts in the case, the rules and regulations of the Federal Power Commission, and the applicable law, he would have known that. The interstate gas pipeline carriers are a

[18] See generally, 108 Cong. Rec. 16682–4, 16716 (daily ed. August 27, 1962); 16795 (daily ed. August 28, 1962); 17387, 17392–3 (daily ed. September 4, 1962); 17632 (daily ed. September 6, 1962).

> regulated utility, and, under the operations of the Federal Power Commission, any saving effected by them reduces their rate base.[19]
>
> * * * * * * *
>
> The 7 percent the Senator is talking about has nothing to do with oil companies. His reference to gas pipelines instead is concerned with interstate gas transporters, who are public utilities, and who are under the regulation of the FPC, which has without exception compelled the interstate gas pipeline carriers to pass on to the consumers any savings that they get by such a situation as a tax credit.
>
> Mr. Proxmire. Will not the gas pipelines get a windfall?
>
> Mr. Kerr. The gas pipelines will not, because any reduction they get they pass on to the consumers under the regulations of the Federal Power Commission. The consumers in Wisconsin will get the windfall.[20]

Senator Proxmire offered an amendment reducing the allowable credit for gas pipelines to 3%. Senator Kerr, in successfully opposing this amendment, stated in pertinent part:

> Actually, I would think that the consumers of Wisconsin were more interested in the 7 percent given to interstate pipelines than in the 7 percent given to any other system of transportation, because interstate carriers of gas are utilities regulated by the Federal Power Commission. There may be State regulatory bodies that failed to require a regulated private utility to pass on the 3 percent credit to the customers or consumers. I do not know of any. I am not saying—there are, but I am saying there may be. But there is not a Member of the Senate who does not know that the Federal Power Commission will require the regulated interstate pipeline companies or transporters to pass on to the consumers the benefit of the 7-percent tax credit available to interstate gas pipelines.[21]

I conclude, therefore, that the Revenue Act of 1962, as amended, does not prescribe the regulatory treatment to be given by the Commission to the investment tax credit. Consequently, the Commission is free to give "such effect to the purposes of the tax statute as is appropriate within the principles of regulatory law expressed within the Natural Gas Act." *Panhandle Eastern Pipe Line Co.* v. *F.P.C.* 316 F. 2d 659 (CADC–1963). Cert. denied 375 U.S. 881 (1963). The appropriate regulatory treatment is, under this view, entirely a matter of the Commission's sound discretion and policy under the Natural Gas Act, to which issue we now turn.

Commission policy was most recently expressed in Opinion No. 379, *Southern Natural Gas Company,* Docket Nos. G–20509 and RP60–15, relating to statutory depletion and intangible well drilling expenses. [29 FPC 323]

> Turning now to the tax benefits for statutory depletion and intangible well drilling expenses, the issue to be decided is whether the savings in taxes accruing to Southern through the use of these special deductions should be retained by Southern or passed on to its ratepayers. In computing its tax allowance for its cost of service, Southern retains these benefits for itself by using book depletion instead of the statutory percentage depletion, and by taking no deduction for intangible drilling costs. Since its test year taxes were in fact reduced by the special deductions, the tax allowance included in the cost of service is higher than the actual taxes paid. Staff, in its cost of service, included statutory depletion and intangible well drilling costs as tax deductions, thereby reducing the tax allowance as computed by Southern by $558,289.

[19] 17 Cong. Rec. 16682, 87th Cong., 2nd Sess.

[20] 17 Cong. Rec. 16795, 87th Cong., 2nd Sess.

[21] 18 Cong. Rec. 17397, 87th Cong. 2nd Sess.

> Subsequent to Southern's presentation of its case in the earlier phase of these proceedings, and prior to resumption of hearings in the second phase, the Fifth Circuit Court of Appeals issued its decision in the *El Paso* case, holding that "there is no statutory authority for the Commission to treat actual savings in taxes to which natural gas companies are entitled any differently than savings in any other cost of service." The effect of the court's holding is to require that such savings be passed on to the consuming public. In view of the court's decision, and in recognition of the fact that the Commission has consistently followed this decision in its treatment of the producer tax benefits in cases decided since *El Paso*, Southern does not belabor the issue in this second phase of the proceedings.

The Court of Appeals for the District of Columbia Circuit defined these principles on March 15, 1963, in *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, *Supra* as follows:

> Next we consider "the principles of regulatory law expressed in the Natural Gas Act," which impelled the Commission to allow no more of a return on these funds than that necessary to effectuate the tax act. These principles include the requirement that a public utility must operate on the most economical basis consistent with good service and sound finance. Implicit in this requirement is the rule that the rates charged must reflect the company's actual total costs, including its cost of capital. Since the capital represented by the funds generated by accelerated depreciation cost the company nothing, sound principles of rate regulation support the Commission's decisions to permit the company no more of a return on these funds than that necessary to effectuate the congressional policy underlying the tax statute. See *Cities of Lexington, et al.* v. *Federal Power Comm'n*, 295 F. 2d 109 (4th Cir. 1961); *El Paso Natural Gas Co.* v. *Federal Power Comm'n*, 281 F. 2d 567 (5th Cir. 1960).

If the rates charged by United are to reflect its actual tax costs, then any tax abatement by reason of the investment tax credit must be reflected by a reduction in the income tax component of its cost of service and thereby passed through to the ratepayers. Flow-through of the credit will reduce service costs, stimulate new business, encourage investment in more modern plant, and thus facilitate the legislative purpose of stimulating additional plant investment and expansion. The question remains as to the accounting procedure for reflecting the dollar impact of the credit and the quantum of such flow-through.

The Proposed Regulatory Treatment

The proper accounting treatment for investment tax credits is now pending before the Commission for determination in a Proposed Rulemaking proceeding.[22] It was not discussed or briefed by the parties in this proceeding. Consequently, this opinion will be confined to the effect of the investment tax credit in fixing United's rates.

Staff arrives at its proposed investment tax credit by assuming normalized annual gross property additions of $30,000,000 in depreciable plant eligible for the credit for the indefinite future. This estimate of future additions is based upon average net additions over a ten-year period from 1952 to 1961, and results in an investment tax credit to United of $2,100,000.

---

[22] In Order 261, issued January 9, 1963 the Commission prescribed interim accounting procedures to be followed with respect to the investment tax credit until permanent accounting treatment is ordered. Under the interim accounting procedure the amount of the credit will be held in suspense in "Other Deferred Credits" Account No. 253, pending issuance by the Commission of final accounting rules. Final rules have not yet been issued.

Memphis computed a credit of $1,307,728 based upon an assumed annual investment expenditure of approximately $18,681,000 as reflected in 1961 tax return data, and upon the assumption that the investment credit would be limited by 25% of United's tax liability otherwise computed (Tr. 866, 3640). United estimated its investment tax liability for 1962 at $866,000 (Tr. 540). It is unnecessary and undesirable to deal in estimates when actual figures for the tax year as adjusted through November 30, 1962 can be made available prior to Commission determination. Accordingly, United will be directed to file a supplemental schedule showing its actual investment tax credit for 1962, as adjusted.

Applying the principles previously discussed, the quantum of the flow-through should be limited to that portion of the investment tax credit which represents an actual net tax savings to United. The net tax savings over the life of the property subject to the credit per $100 of capital additions is $3.36 rather than $7.00. This is so because the reduction of the tax depreciation base by $7.00, the amount of the credit, as required by the tax statute, costs the company 52% of $7.00, or $3.64, leaving a net tax saving of $3.36 over the life of the addition. Thus only 48% of the investment tax credit represents an actual reduction in tax expense; the remaining 52% reflects the reduction in the depreciation base. Flow-through of 48% rather than 100% of the tax credit also eliminates any element of inequity incident to passing the entire benefit on to the rate-payers while leaving the company adversely affected in that the reduced depreciation base will result in a higher tax liability in future years than would prevail absent the credit and the involuntary reduction of the tax depreciation base incident thereto. This treatment, it is believed, gives "such effect to the purposes of the tax statute as is appropriate within the principles of the regulatory law as expressed in the Natural Gas Act". *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, No. 16479 (March 15, 1963). It is also consistent with the legislative history, which suggests that Congress contemplated that both the pipelines and their customers would benefit jointly from the investment tax credit. One hundred percent flow-through in the year of acquisition would overstate the actual net tax savings to the company while subjecting it to increased taxes in future years arising from the reduction in the tax base of the property acquired.

Guideline Depreciation Rates

Memphis takes the position that United's depreciation schedules are grossly inadequate and result in a substantial understatement of tax deductions and an equivalent overstatement of tax liability. It proposes specific increases in United's tax depreciation rates so as to eliminate any tax liability.[33] The major

---

[33] The differences between United and Memphis are shown graphically in the following table:

	United exhibit No. 2-36	Memphis exhibit No. 23	
		Basis No. 1	Basis No. 2
Additional deductions:			
Depreciation expense	$2, 879, 167	$2, 830, 127	$10, 780, 743
Loss on abandonments	$89, 117	$256, 633	$256, 633
Taxes capitalized	$130, 115	$230, 735	$230, 735
Prepaid gas		$4, 372, 184	$4, 372, 184
Effective tax rate	52%	48. 537%	
Investment tax credit		$1, 307, 728	
Proposed income tax allowance	$12, 099, 662	$3, 923, 208	

increase in depreciation expense, $6,081,096, is based on the use of guideline depreciation rates under Revenue Procedure 62-21,[34] rather than the depreciation rates and depreciation property base used by United in its computation of taxable income. United introduced substantial evidence (Exhs. 14-2, 14-3) to show that its depreciation deduction under its present rates is not below the "reasonable allowance" standard prescribed by the tax statute. United's present depreciation deductions create reserves whose ratio as to each guideline property class except buildings exceeds the prescribed reserve ratio limits specified in the revised procedure. Exhibit 14-2 also shows that this margin of excess increases for each year during the study period (1962-1967). Exhibit 14-3 uses the guideline depreciation rates in computing depreciation reserves for the years 1962 to 1967, and shows an even greater excess of the depreciation reserve ratio over the permissible ratio reserve range. Accordingly, United contends that it may not claim the higher amounts of depreciation which would result from the application of a Rev. Proc. 62-21 rate (Tr. 673). The Staff does not dispute these conclusions.

Memphis claims that the depreciation rates currently used by United are inadequate and unreasonable and that United should use the Rev. Proc. 62-21 rates for cost of service purposes. Memphis' testimony and Exh. No. 23, Schedule 8, show figures for specified classes of assets along with the depreciation lives and rates specified for such classes. They do not show the depreciable properties of United by guideline classes and rates as prescribed in Rev. Proc. 62-21; nor do they show compliance with the reserve ratio test prescribed by the procedure so as to determine whether the depreciation deduction is reasonable or unreasonable. The record does not support, therefore, the conclusion that the depreciation rates in Rev. Proc. 62-21 should be substituted for United current rates in computing the depreciation deduction for the tax component in United's cost of service.

Liberalized Depreciation

An additional deduction in United's tax expense in the amount of $1,820,481 is proposed by Memphis by way of liberalized depreciation deductions under Section 167(b) of the Code (Tr. 867–871). United uses straight line depreciation for tax purposes and has not elected to adopt liberalized depreciation. Memphis alleges that United does not use liberalized depreciation, for reasons of "over-all consolidated tax strategy which would not obtain if United were an independent pipeline company" (Memphis br. p. 37). No evidence is presented by Memphis, however, to support its view that the utilization of straight line depreciation is improper, discriminatory, prejudicial to the interests of rate-payers and consumers, or outside the proper bounds of managerial discretion. Memphis suggests that United's tax allowance be adjusted downward to the level which would result if liberalized depreciation were utilized.

So far this Commission has treated any tax saving incident to accelerated depreciation as a tax deferral and a reserve for future taxes. It is true, as Memphis notes, that the Commission has decided to reexamine the tax treatment of liberalized depreciation in *Alabama-Tennessee Natural Gas Co.*, G–5471, *et al.*, 31 FPC 208. However, in that case accelerated depreciation was taken. Here it was not. The choice under the tax law is the taxpayer's. Absent abuses not shown in this record, I know of no Commission policy to compel the taking of liberalized depreciation over the objections of company management utilizing straight line methods.

---

[34] *Depreciation Guidelines and Rules*, IRS Publication No. 456; *Tables for Applying Revenue Procedure 62-21*, IRS Publication No. 457.

Gas Prepayments

United's 1961 tax return includes a deduction for gas prepayments under take-or-pay contracts in the amount of $6,082,138. For 1962 it estimates a deduction of $8,190,538 (Tr. 2903, Exh. 35) as adjusted for the tax period. Payments in the amount of $5,937,060 have not been included by United in the tax component of its cost of service on the ground that such prepayments represent non-recurring use of period items. The tax year average prepayments are included, however, in United's rate base as working capital (Exh. 1-50).

By December 1, 1962, such prepayments totaled $15,340,800 (Tr. 117, Exh. 10-12). After initial disagreement, the Staff now concurs in the inclusion of such prepayments in the rate base as part of the working capital allowance.

> The evidence in this record establishes that United will not make any further prepayments in the calendar year 1963 because its sales for that year, as forecast in its own rebuttal exhibits, are of sufficient volume to enable it to take 100% of its minimum take or pay contract quantity from every producer whose contract imposes a take or pay obligation (Tr. 3497). Thus, the inclusion of such prepayments in United's rate base pertains to a nonrecurring item. Furthermore, such prepayments are neither tangible items used and useful in providing service like materials and supplies nor cash working capital. We are aware, however, of past Commission precedents including such prepayments in the rate base on the theory that they are necessarily and prudently incurred cash outlays which precede by several years the receipt of the related revenues to be realized when the gas paid for in advance is made up and sold. After careful consideration, and upon balancing all of the foregoing factors, the staff has included United's carryover prepayments in its working capital allowance. [Staff br. pp. 25, 26.]

Memphis argues that these prepayments should be reflected by an additional tax deduction of $4,372,184 in determining the test period cost of service. It argues that the actual tax practice should be applied in the rate making process. The rate making process, however, is based on test year operations as projected for the future. Since these prepayments are not recurring and will be eliminated as sales enable United to take 100% of its minimum take or pay contract quantity, the Memphis procedure would produce major distortions from year to year.

Texas Gas and Eastern Interveners propose that the net of prepayments less tax effect should be included in the rate base. This would not affect United's Federal income tax allowance in its cost of service but would give recognition to the fact that United's working capital needs are reduced *pro tanto* by reductions in its income tax liability. United has taken a tax deduction since 1961 for such prepayments. Consequently, the minimum 52% tax savings should be deducted from the rate base and a return allowed on the remaining 48%. In this way only the net cost of the gas will be included in working capital. This treatment[25] of gas prepayments is deemed fair and reasonable.

---

[25] Its application is illustrated by Eastern Interveners as follows: (Br. p. 28)

Purchased Gas Prepayments (Exh. 13-2, Sch. 3)	$15, 340, 800
Equivalent Income Tax Effect at 52%	7, 977, 216
Related Income Tax Increment in Working Capital 50% (Exh. 13-2, Sch.3) ×1.046488227 (Exh. 13-2, Sch. 5) ×6½% of above	274, 312
Net Reduction in Working Capital Allowance	7, 705, 904
Equivalent Reduction in Return at 6½%	[1] 500, 884

[1] For simplicity, we have not modified the working capital allowance or related return for effect of operating expense adjustments or other income tax adjustments. If United's methods for working capital and income tax computations were followed precisely, the adjusted cost of service summarized hereinafter would be increased by about $3,073.

Cost Allocation and Zoning

We come now to a discussion of the principles governing the separation and allocation of United's costs of service to classes of sales and the method by which costs incident to such sales and services should be allocated and borne by United's customers. United sells gas for resale under rates subject to Federal Power Commission regulation, to distribution Companies at town border rates in Louisiana subject to regulation by the Louisiana Public Service Commission, to distribution companies in Texas regulated by the Texas Railroad Commission, and direct sales to industrial plants not subject to regulation.

These sales are made in the major gas producing areas of the United States located in the States of Texas, Louisiana, Mississippi, Alabama, and Florida, an area extending approximately 800 miles from east to west along the Gulf coast and about 400 miles from north to south.

There are four major methods proposed for the zoning and allocation of United's cost of service among its classes of sales and customers. (1) The four-zone system[26] known as Method 8 supported by Central Zone customers and approved most recently by the Commission in Docket No. G–9547, *et al.* 25 FPC 26; (2) United's five-zone Method 8 which breaks up the present Southwest Zone into a separate Texas and Lafayette Zone; (3) Staff's system-wide roll-in of jurisdictional costs after the segregation and assignment of non-jurisdictional costs to non-jurisdictional sales; and (4) the Gulf Coast method proposed by Texas Gas which modifies Method 8 to the extent of combining the two supply zones, Southwest and New Orleans, into one Gulf Coast Zone.

Ordinarily, the Commission prefers rolling-in system-wide costs of service rather than allocating such costs to particular customers or zones (See *Battle Creek Gas Co.* v. *F.P.C.*, 281 F. 2d 42 (CADC, 1960)). United, however, does not have a system-wide rate applicable to all customers for similar services. For the past 20 years its rates have been fixed by geographic zones with rate differentials between each zone. Under this technique, now known as Method 8, the United system is currently divided into four geographic rate zones called the Southwest, Central, New Orleans, and Jackson Zones; Southwest and New Orleans are gas supply zones, Central and Jackson are gas sales zones.[27] A separate cost of service is computed for each zone and is the basis for the rates charged.

The system of zonal rate differentials first came before the Commission in 1943, when it approved the settlement of a rate proceeding that had been instituted by complaint of the Louisiana Public Service Commission (3 FPC 402) which resulted in a Jackson area rate (25¢ per Mcf) 6¢ higher than the Central area rate (19¢). The Commission explained these rate differentials as follows:

> The over-all reduction of $2,195,287.00 has been allocated to "rate areas" in accordance with the Commission's established policy of endeavor-

---

[26] Summarized by Texas Gas Witness Benson as follows: (TR. 910).

Essentially, the total costs of service for each zone are first classified consistent with established Commission principles. Then the classified costs of the zones having gas supplies in excess of the requirements of such zones are allocated among the classes of sales made within the zone and to the gas transferred out of that zone. The transmission system sales within zones which have a deficiency of gas supply (Central and Jackson) are then allocated their share of the production and transmission system costs transferred from other zones plus their share of the production and transmission system costs incurred within the respective zones.

[27] For Map of Zones see United's initial brief, App. A and 25 FPC 90 (MAP 1).

> ing to obtain uniform rates to the widest extent feasible. In determining areas where uniform rates should prevail, consideration is given to the relative cost of rendering service, the location of gas fields, natural boundaries, and the general characteristics of the region. In other words, our purpose is to encourage the establishment of uniform rates in regions where substantially the same operating and natural conditions prevail, starting with the premise that the widest areas practicable in terms of average costs and physical characteristics of service, should be designated. [3 FPC p. 404.]

A Commission investigation instituted in 1948 into the justness and reasonableness of United's rates and charges under Section 5(a) of the Act resulted, after the consolidation of various rate increase filings under Section 4(e), in a 1954 settlement approved by the Commission (13 FPC 398; 14 FPC 353, 406).

The Commission's decision, adopting the Method 8 allocation of United's costs, was affirmed in *Mississippi River Fuel Corporation* v. *F.P.C.*, 252 F. 2d 619 (CADC 1957) cert. den. 355 US 904. The use of Method 8 as a basis for allocating gas purchase cost was again affirmed by the Commission in its order of January 4, 1961, covering locked-in periods from November 1, 1955 through November 30, 1957, Docket Nos. G-9547, G-10592 (25 FPC 26, 31).

In that proceeding, United proposed substantial alterations to Method 8 which would have had the effect of increasing jurisdictional costs, and shifting zone boundaries. The Commission Staff proposed a so-called Method 1 which featured a system-wide averaging or rolling-in of gas purchase costs and a new system for allocating transmission costs. The examiner approved Method 8 for allocating transmission costs but endorsed a system-wide rolling-in of gas purchase costs as recommended by the Staff on the basis of the integration and flexibility of the United system. He found that because of rapid increases in Louisiana gas prices the continued application of Method 8 would have a severe impact on Jackson Zone customers.

> The situation which would arise, therefore, if Method No. 8 were employed here without modification would be that only the customers in the Jackson Zone would bear practically the full brunt of the higher cost of gas purchases made by United in the area of the Louisiana gulf, and the burden of these higher costs as compared to the gas costs in other areas would not be shared by the other jurisdictional customers. In a system such as United's, which is wholly integrated, highly efficient and extremely flexible, and where the management has the power to place an Mcf of gas any place it chooses to place it on the system, it hardly seems reasonable to conclude that customers in the Jackson Zone should pay disproportionately higher rates for gas which they must buy as compared to consumers in Central Zone and elsewhere on this system. The more equitable procedure to take in this situation would appear to be to modify Method No. 8 by a "roll-in" of gas costs. [25 FPC p. 40.]

The Commission ruled that Method 8 should be adhered to in its entirety on the ground that customers in the Central Zone could not benefit sufficiently from southern Louisiana gas purchases to justify imposing the relatively higher costs incident to rolling-in purchase gas costs throughout the system. The Commission stated in pertinent part:

> The ability to move gas anywhere within the system may, as a remote possibility be true, but a realistic appraisal of United's facilities and operations indicates that it is a highly improbable proposition which should not be a controlling consideration. A study of United's system shows that it is in fact two separate systems with smaller interconnecting

> facilities. One system runs north from southern Louisiana and the other runs northeast and north from southern Texas. United's daily take from Texas sources is considerably greater than the amount of gas necessary to serve all its non-jurisdictional Texas customers. Thus the direction of gas flow on the Texas part of the system must be away from the southwest zone where the Texas customers are located and into the central zone where, under Method 8, gas purchase costs are primarily allocated on the basis of purchases in Texas and northern Louisiana. [p. 31.]

The Commission's reasoning followed the conclusion of the Louisiana Supreme Court in *United Gas Pipe Line Co. v. Louisiana Public Service Commission*, 130 So. 2d 652, 662 (May 29, 1961).

> A study of United's system shows that it is in fact two separate systems with smaller interconnecting facilities. One system runs north from southern Louisiana and the other runs northeast and north from southern Texas. Natural gas cannot be brought into the New Orleans zone from South Texas without terminating service to a major portion of the customers and reversing the gas flow. Neither can the pipeline be moved at will "like a garden hose" to take advantage of lower well head prices. * * * 130 So. 2d at 662 [p. 35.]

This description of United's System was true for the locked-in periods through November 1957. It is not true today. There has been a major operational change in United's transmission system resulting from the construction of a 30-inch 200 mile line from southern Louisiana, where substantial, relatively high cost reserves are located, to interconnect with Central Zone facilities near Monroe, Louisiana (Tr. 197). This line was justified and authorized in the certificate proceeding to meet the declining gas supplies and increasing market demands of Central Zone customers.

> There is a need for the new facilities due to the declining supplies of gas available in the East Texas and North Louisiana area (which area embraces United's Tyler-Shreveport-Monroe operating districts) and the increased requirements of United's customers in the area. The size and nearness of available gas reserves in South Louisiana is a logical area from which to obtain the needed additional gas. In addition, the utilization of these facilities will enable United to make the above sales to the three pipeline customers at the terminal of the new facilities near Monroe, Louisiana. [Docket No. CP61-151, Decision issued October 3, 1962, affirming Order issued December 17, 1962.]

It went into service on December 16, 1961 (Exh. 1-23). United's Chief Engineer testified that 115,684,000 Mcf would flow from Southern Louisiana to Central Zone in 1963. When phase two of construction is completed in time for the 1963-1964 heating season, the capacity of the line will be increased to 420,000 Mcf per day.[28] (Tr. 1633, 1642)

Method 8 separated purchase gas costs in the Central and Jackson Zones to reflect the operational separation of the east-west legs of the system as it existed up to the current construction of the new Bayou Sale—Sterlington interconnection. The operational integration[29] of these lines now justifies the roll-in of purchase gas costs for the Central and Jackson Zones consistent with the principle enunciated by the Commission in the 1943 United rate case "that the widest area practicable in terms of average costs and physical characteristics of service, should be designated."

---

[28] United's application in Docket No. CP63-241, filed February 27, 1963 estimates (Exh. X-1) that peak day imports will rise to 546,000 Mcf, approximately 62% of total gas imports.

[29] Prior to the new North-South Louisiana 30 inch line, United in the past few years has completed the Sterlington line (the West 30 inch, Tr. 1789), the 30 inch Kosciusko line, and the Southeast Louisiana—Mobile project (Tr. 1789-90).

It does not justify, however, the system-wide roll-in of United's gas purchase costs from all sources as urged by Staff (Tr. 4416). The Commission noted that United would probably find it impossible to recover its full costs if all gas costs were rolled-in, and stated

> . . . in fact it appears that rolling-in all gas costs would cause an unreasonable shift of costs to the Southwest and Central Zones, would be contrary to the historical rate design of the system and would place an undue burden on United's non-jurisdictional customers who would not receive any benefit from United's purchases in Southern Louisiana [p. 32.]

Staff's position was rejected by the Commission in its order of January 4, 1961, and should be rejected here (25 FPC 26, 30). While the roll-in of the two gas sales zones, Central and Jackson, is justified because of the substantial benefits Central Zone customers are now receiving and will continue to receive from the new 30-inch line, Southwest Zone customers are not receiving the same benefits. A system-wide roll-in would, as emphasized by the Commission, continue ". . . the problem United would have in forcing Texas customers to pay for Louisiana gas when there is more than enough gas from Texas sources to serve them." (25 FPC 31).

Staff proposes the direct assignment of non-jurisdictional purchase gas costs to United's non-jurisdictional operations in the New Orleans and Southwest Zones. These producers of course are not subject to FPC regulation. Thus the Staff procedure rejects Method 8 at least as it was described by the Commission in its January 4, 1961 decision (25 FPC 26), and is based on the physical separation of jurisdictional interstate and non-jurisdictional intrastate facilities independent of gas sources. After separating these two largely parallel systems, Staff proposes a jurisdictional allocation adjusted to reflect United's historic rate differences. Maintenance of historic Method 8 zone rate differences is inconsistent with the system wide roll-in of jurisdictional gas costs advocated by Staff. It is also improper cost allocation, according to United, since it is contrary to the actual operations of the system and does not follow the flow of gas.

Similarly, United's proposal to add a fifth Lafayette Zone must be rejected as a step in the wrong direction. United's argument for an additional cost zone in this proceeding is similar to its argument for the creation of the similar Southwest Louisiana Zone which was rejected by the Commission in the prior proceeding, principally on the ground that increasing the number of zones would further segregate and allocate specific gas sources and facilities to specific customers contrary to Commission policy. While Southwest Texas customers do not draw substantially on gas transported by the new 30-inch line, they do benefit from the increased system flexibility, and should not be insulated entirely against the trend of increasing gas costs in southern Louisiana which results from the introduction of Louisiana gas into the Southwest Zone. The new line does integrate to a greater degree than formerly the Southwest Zone with South Louisiana gas reserves and permits additional sales in the Southwest Zone either directly or by displacement. The life of Texas reserves will be lengthened. United's witness Poindexter explained its newly acquired ability[30] to make 75,000 Mcf daily sales to Natural Gas Pipeline at Goodrich as follows:

> Q. Would you describe for us the flow of gas which enables you to sell 75,000 Mcf per day at Goodrich to Natural Gas Pipeline Company of America, and explain the extent to which you use directly or indirectly the new North-South Louisiana line in making that sale?
>
> A. As we have already discussed, the 30-inch Agua Dulce-Sterlington line with no delivery at Goodrich to Natural Gas Pipeline would have a capacity of approximately 480 million feet per day into Sterlington by virtue of the construction of the 30-inch South-North Louisiana line and the making available of sufficient capacity to the Central Zone such that the amount of gas brought through the Agua-Dulce-Sterlington line to Sterlington might be decreased to 405 million feet per day, there is made available at Goodrich a capacity of 75 million cubic feet per day for delivery of Natural Gas Pipeline Company (Tr. 1650–51).
>
> Q. . . . If you eliminated the North-South line from service in the future year, would United be able to make the sale of 20 million Mcf a year to the Natural Gas Pipeline Company of America at Goodrich?
>
> A. No. (Tr. 1778).

The Commission rejected United's separate Southwest Louisiana Zone in the prior proceeding thus averaging the cost of Texas and Louisiana gas in the Southwest Zone.

The Commission stated: (25 FPC 30)

> United urges that some shifting of costs to jurisdictional customers is necessary to preserve their non-jurisdictional services at competitive rates acceptable to local regulatory agencies. We are aware of the problems which inevitably arise for companies subject to dual regulation or whose selling price is of necessity limited by local regulation of customer companies. But where, as here, we have and are retaining a fair division of costs between jurisdictional and non-jurisdictional customers as advocated by United itself in Docket No. G–1142, we should not allow United to shift all later cost increases onto its jurisdictional customers in order to permit it to preserve low rates before local regulatory bodies.

No sound reason for further separation is presented here. Natural Gas Pipeline and Southern Union's recommendation that the Commission require a special rate for pipeline and town-border customers purchasing gas from United in Texas should be rejected for similar reasons.

Moreover, creation of a new Lafayette Zone would shift approximately $1,290,000[31] per year of costs on to Central Zone customers which otherwise would be borne by non-jurisdictional customers of United (Tr. 917, Exh. 24–2, Sheet 1). Thus United's five-zone method results in an unfair, additional allocation of gas costs to jurisdictional customers.

Memphis suggests that the Southwest Zone be expanded to include gas sources south of Bayou-Sale Junction. This would give Memphis and other Central Zone customers the benefit of large volumes of low price (11¢ per Mcf) gas flowing from Eugene Island to Bayou-Sale Junction and reduce Central Zone jurisdictional costs about $1,360,000 (Memphis br. p. 56). The gas flows through the New Orleans Zone to the Jackson Zone (Tr. 1839–42). Any further contraction of the New Orleans Zone as proposed would unjustifiably load an additional $2,060,000 to Jackson Zone jurisdictional costs.

---

[30] This benefit justifies placing the gas under United's PL–C rate.

[31] The major share of the $1,600,000 rate increase sought by United in this proceeding.

Jackson Zone customers are entitled to a contraction, not an expansion, of the rate differential between the Jackson and Central Zone on the basis of actual costs differences and trends.

Interveners, Texas Gas, Mississippi River, and UGI, urge the retention of Method 8 without modification basically on the ground that "there is no further reason to deviate from a method of allocation used on the United system for over 20 years" (Mississippi br. p. 14). The change is justified by the major operational changes in United's gas supply and facilities required to meet increased Central Zone demands from South Louisiana rather than South Texas Gas. This is the primary reason for merging Central and Jackson purchase gas costs.

Texas Gas also suggested a three-zone cost allocation procedure which rolls in the two supply zones, Southwest and New Orleans, into a single "Gulf Coast Zone", but leaves the present Central and Jackson Zones unchanged. The effect of this roll-in is to dilute high Southern Louisiana Gas costs with lower South Texas costs and transfer additional jurisdictional costs ranging from $506,000 to $748,000 to non-jurisdictional Texas customers (Tr. 923, see Chart I, II and III of United's initial br.) This places an undue burden on United's non-jurisdictional customers without equivalent benefit from Southern Louisiana Gas. The recovery by United of these additional costs from industrial customers in Southern Texas would, as noted by the Commission, be extremely difficult, if not impossible (25 FPC p. 32, fn. 2).

Stability and historical continuity are major goals in the design of basic rate schedules. Due to rapidly increasing purchase gas costs, and the application of Method 8, price differentials based upon United's allocated costs have fluctuated sharply, the Jackson Zone rates being higher than the Central Zone rates. Exhibit 27-1 shows the history of such rate differentials as follows:

UGPL FILED PIPELINE RATES IN JACKSON AND CENTRAL ZONES, BY DOCKET NUMBER

Docket	Effective date	Central zone		Jackson zone		Differential in 100% load factor rates
		Dem.	Comm.	Dem.	Comm.	
		$/Mcf	¢/Mcf	$/Mcf	¢/Mcf	¢/Mcf
G-1142	(*)	0.75	10.0	1.03	12.0	2.9
G-9547	4/1/56	1.10	10.5	1.56	12.5	3.5
G-10592	11/16/56	1.18	11.5	1.62	13.5	3.5
G-12801	12/1/57	1.19	12.5	1.37	15.0	3.1
G-15360	12/1/58	1.19	13.0	1.37	16.8	4.4
G-18406	10/1/59	1.22	14.1	1.52	18.5	5.4
RP60-2	8/13/60	1.33	14.8	1.61	21.9	8.0
RP61-18	6/15/61	1.43	15.5	1.61	22.8	7.9
RP63-1	1/1/63	1.43	16.94	1.44	23.5	6.6

*These are rates approved by the Commission in that docket as of 8/1/54.

The applicable data relative to United's RP63-1 substitute rates is as follows:

Docket	Effective date	Central zone		Jackson zone		Differential in 100% load factor rates
		Dem.	Comm.	Dem.	Comm.	
		$/Mcf	¢/Mcf	$/Mcf	¢/Mcf	¢/Mcf
Substitute RP63-1	1/1/63	1.43	16.54	1.44	22.27	5.76

If, after rolling in Central and Jackson Zone purchase gas costs, rates were designed for pipeline customers with no price differential,[32] it is estimated by Texas Eastern that Central Zone rates would increase approximately $6,200,000 a year (Texas Eastern br. p. 21). In order to avoid the disruptive effect of any such drastic change in the historical rate differential, Staff proposes a three-cent differential. UGI witness Frazier proposed a rate differential varying between 3.5 and 4.8¢. The lower figure represents a value measurement based upon the estimated cost of transporting gas from Monroe to Kosciusko (Tr. 1002–5); the higher is based upon a uniform import cost to the Central and Jackson Zones. Eastern interveners recommend a differential of 4¢, a rounded figure between the two Frazier proposals. Staff witness Hahn conceded that if the historical differential were computed as a percentage of the price charged rather than a fixed cents per Mcf it would result in a differential greater than 3¢ per Mcf (Tr. 4542). Accordingly, a price differential of 3.5¢ will be adopted which gives weight to both cost and historical considerations.

Texas Eastern indicates that it would be willing in this proceeding to have the presently effective Central Zone rates continued in effect with all decreases in the cost of service, including reductions in purchase gas cost, being first used to decrease the Jackson Zone rates until the price differential is reached, all further decreases being reflected so as to maintain the zone differential.

It is apparent that decreases in United's cost of service will be substantial with equivalent substantial reductions in Jackson Zone rates. The impact[33]

---

[32] Mississippi Valley and Wilmut advocate no differential in rates between the Jackson and Central Zones.

[33] The range of increases in Central Zone and decreases in Jackson rates is indicated in a comparison prepared by Mississippi River, of rates in RP61–18 with rates proposed here by United, Staff and Mississippi River Fuel:

	Estimated 1963 billing determinants	
	Sum of billing demand	Annual volume
Total rate schedule PL–C	12,811,460	314,297,293
Total rate schedule PL–J	6,498,120	167,415,318

	Revenue		
	Docket RP61–18 rates	Proposed rates	Increase or (decrease)
United's Proposal			
Total rate schedule PL–C	[1] $67,036,468	[2] $70,305,160	$3,268,692
Total rate schedule PL–J	[1] 48,632,666	[2] 46,640,684	(1,991,982)
Staff's Proposal			
Total rate schedule PL–C	67,036,468	[3] 70,900,787	3,864,319
Total rate schedule PL–J	48,632,666	[3] 42,687,357	(5,945,309)
Mississippi's Proposal			
Based on United's costs:			
Total rate schedule PL–C	67,036,468	[4] 68,765,103	1,728,635
Total rate schedule PL–J	48,632,666	[5] 46,509,120	(2,123,546)
Based on Staff's costs:			
Total rate schedule PL–C	67,036,468	[6] 67,005,324	(31,144)
Total rate schedule PL–J	48,632,666	[5] 45,373,148	(3,259,518)

[1] PL–C $1.43 and 15.50¢; PL–J $1.61 and 22.80¢.

[2] PL–C $1.43 and 16.54¢; PL–J $1.44 and 22.27¢.

[3] PL–C $1.03 and 18.36¢; PL–J $1.03 and 21.50¢.

[4] PL–C $1.43 and 16.05¢ (appendix C).

[5] PL–J allocated costs (appendix B).

[6] PL–C $1.30 and 16.02¢ (appendix C

of an immediate roll-in of Central and Jackson purchase gas costs, even with the 3.5¢ differential, would be too severe on Central Zone customers to justify its use without some transitional cushion which gives recognition to the historic pattern of revenues and price differentials which have existed between the two zones over the past 20 years.[34] It would be particularly inappropriate in a period of stabilizing and declining prices to effect a sharp and substantial price increase to Central Zone customers which in turn would trigger related price increases to their customers. Accordingly, Texas Eastern's proposal will be adopted as a matter of rate design so as to continue presently effective Central Zone rates and channel all reductions into the Jackson Zone until a 3.5¢ price differential, to be reflected in the commodity component of the rates, has been reached.

Transmission Costs

United advocates an Mcf mile method to give cost effect to the respective load factor and miles of haul, and to separate transmission costs to the transportation customers in the Central Zone (Tr. 2214). It emphasizes that the respective miles of haul between sales for the Staff's separate intrastate and interstate systems are a significant cost factor.

In the prior proceedings the Commission quoted the Examiner with approval as follows: (p. 30)

> In the opinion of the undersigned, the method of allocating transmission costs evolved in Docket No. G–1142, *et al.*, is sounder in principle than that advocated by United in the current proceedings and more logical than the method advocated by the Staff in the current proceedings and, in addition, it has the support of Commission and Court precedent established in United's last rate case.

It should be noted that under Method 8, United is allocated its transmission costs for gas transferred from other areas into the Central and Jackson Zones. The amount of the cost of average haul within the Southwest and New Orleans Zones is rolled into the cost of haul in Central and Jackson Zones to make the total allocated to United for transmission purposes.

United's proposal would allocate a higher percentage of costs to the Central and Jackson Zones ". . . . and by this means to increase unjustly and unreasonably the relative percentage of the total costs to be borne by jurisdictional customers in the northern zones of the system" (25 FPC 96). Accordingly, Method 8 will be continued in allocating transmission costs.

Rate Design

The basic controversy in this proceeding on the issue of rate design involves the general relationship between the total level of rates in the Central rate zone and the Jackson rate zone. Also at issue is the relationship between the demand and commodity charges to be allowed in United's two-part rate schedules, especially in the Central Zone.

United makes sales to pipeline customers under demand-commodity rate schedules PL–C in the Central rate zone and PL–J in the Jackson rate zone.[35] These represent the major jurisdictional sales and revenues. Two-border sales to large volume distributors are made under demand-commodity rate schedules DG–C and DG–T in the Central Zone and DG–J in the Jackson Zone. United proposes to cancel its IND rate schedules for both Central and Jackson Zones and to merge such service into the DG rate schedules.[36] The small volume distributor town-border sales are made at straight rates under rate schedules G–C and G–J.

---

[34] As noted by the Examiner (25 FPC 81) ". . . the two prior rate cases established a historical pattern whereby rates to jurisdictional customers in the Jackson Zone were at a higher level than rates to jurisdictional customers in the Central Zone."

[35] Customers are Texas Eastern, Texas Gas, Mississippi River Fuel, Southern Natural, and Natural Gas Pipeline under PL–C, and Texas Eastern and Southern Natural under PL–J.

F. V. Barnett, for United, presented a complete rate design for United's jurisdictional sales (Tr. 130–63). The only other complete rate design was presented by the Staff witness Hahn (Tr. 840–8). Lee Liberman, on behalf of Laclede, testified to the problem of the relative demand-commodity charge levels in the PL–C rate and the daily minimum take requirement in the PL–C rate (Tr. 942–64). The testimony of Charles Frazier on behalf of UGI, discussed the rate design aspect of the differential between the PL–C and the PL–J rates (Tr. 967–1007). United also offered testimony by L. C. Poindexter, its chief engineer, to rebut Laclede's contention on the limited aspect of the daily take requirement in the PL rate schedules (Tr. 583–92).

The rates filed by United and those recommended by the Staff are as follows:

	United effective in RP63–1		Staff exhibit 40 [37]	
	Demand	Commodity (cents)	Demand	Commodity (cents)
PL–C	$1.43	16.54	$1.03	18.36
PL–J	1.44	22.27	1.03	21.5
DG–C, DG–T	.35	22.7	.46	20.67
DG–J	.365	29.3	.46	23.67
G–C	----------	27.0	----------	25.2
G–J	----------	33.8	----------	28.2

[37] Slightly different rates are presented by Staff in its brief, Appendix C.

Staff and United both propose that the demand charge in the Central Zone be equal (or nearly so) to demand charge in the Jackson Zone for the same class of service. However, there is a substantial difference as to the proposed absolute levels of the demand charges. The rate comparison also shows that United proposes a differential between the two zones of roughly 6¢ in the pipeline schedules and 7¢ in the town border schedules, reflected substantially in the commodity charges. Staff's proposed differential, also reflected in the commodity charges, is about 3¢ for each rate schedule. The Staff rate witness testified that the basic cause of any rate differential between the zones is the difference in cost of purchased gas, and that such differential should be reflected in the commodity charges (Tr. 846, 4612).

Our prior discussion of the historic differential in rates between zones led to the conclusion that the revenue level of Central Zone rates, at United's rates in effect in Docket No. RP63–1, be maintained and that the anticipated reductions in costs be first applied to Jackson Zone rates, as opposed to Central Zone rates, until a 3.5¢ differential, reflected in the commodity charges, has been reached. The circumstances justifying this treatment for the pipeline rates are equally applicable to town-border rates.

This conclusion, however, does not justify the reasonableness of the Central Zone rates as filed by United. United's proposed PL–C demand-charge reflects a 165% tilt or deviation to demand when compared with United's claimed costs, classified according to *Seaboard* and allocated to PL–C sales on the basis of United's proposed method of allocation. Similarly, the deviation in the PL–J rate is 142% to demand. The deviation in town-border rates is about 60% to *commodity* in both zones (See United's Exhibit 1–95.)

---

[36] Wilmut's reply brief objecting to the proposed cancellation was rejected on the ground of late filing (see Commission Order issued June 3, 1963, denying appeal from Secretary's rejection.)

Staff's proposed PL–C and PL–J demand charge of $1.03 reflects a deviation of about 120% to demand, based on Staff's claimed costs, classified according to *Seaboard* and allocated to Central and Jackson Zones on Staff's jurisdictional "roll-in" allocation method. Its proposed 46¢ town-border demand charge shows no significant deviation on this basis. (See Staff's Exhibit No. 40.)

Laclede contends that the tilt or deviation to demand under the PL–C schedule should be restricted to 50%—"a nod to history" and proposes a PL–C rate of 81¢ per Mcf demand and 18.94¢ per Mcf commodity based on United's showing in Exhibit No. 1–95 (Tr. 148) (Tr. 3952). Memphis presented no witness but proposes for rate schedule PL–C the strict *Seaboard* rate of 54¢ demand and 20.39¢ commodity reflected by United's Exhibit No. 1–95. Neither Laclede nor Memphis concede United's claimed costs but use United's Exhibit No. 1 for illustrative purposes.

Under the *Seaboard* method, variable costs are classified 100% to commodity and remaining costs are classified substantially 50% to demand and 50% to commodity. A departure from such a strict classification of costs is permissible in the design of rates, however, when mitigating circumstances justify. *Atlantic Seaboard Corporation*, 11 FPC 43, 52–57 (1952). United's witness Barnett testified that mitigating circumstances may be found in United's long established rate design history for pipeline service in which there has been a traditional tilt to demand, United's competitive situation, and United's take-or-pay-for problem (Tr. 178).

Since 1955 (Docket G–9547) the commodity rate for PL–C customers has been the variable cost rounded upward. The demand charge payment has approximated fixed costs and the commodity charge payment has approximated allocated variable cost. United justifies this departure from the strict application of the *Seaboard* formula on the basis that its PL commodity charge is in competition with field prices being paid directly to producers by its pipeline customers—the higher United's commodity charge, the lower the takes by its major pipeline customers. The volume of gas involved in this competition approximates 165,000,000 Mcf a year, volumes the pipeline customers are entitled to demand but are not obligated to take or pay for if not taken. These volumes represent the range between the 72% minimum bill volume and 100% use of the contract demands, 1,600,000 Mcf in any day or 584,000,000 Mcf in any year, of the five major pipeline customers (Tr. 563–4).

A second area of competition is the industrial market:

> Another and secondary area of competition is that in which United's customers are confronted with a low commodity charge requirement in order to design rates for interruptible sales which they and their customers make and which compete with some other fuel. United's commodity charge historically has been kept close to the variable cost and has helped United's pipeline customers meet such competition. [Tr. 140.]

These factors were given weight by the Commission in *Southern Natural Gas Company*, Opinion No. 379, issued February 18, 1963, and *Natural Gas Pipeline Company of America*, Opinion No. 367, issued November 29, 1962, two pipeline customers of United. In *Southern* the Commission noted that the decision in *Atlantic Seaboard* ". . . . . did not purport to establish a rigid mathematical classification methodology which would be applied, without exception, in all future pipeline cases." It also noted ". . . that the Commission has not slavishly followed *Atlantic Seaboard* but has made advancements in individual cases in the area of rate design in order to achieve a reasonable and just result." (p. 24).

A reasonable and just result in this proceeding requires that recognition be given to United's historic tilt to demand, the closeness of its commodity charge to the variable costs, and competitive factors. The position of Memphis and, to a lesser extent, Laclede that *Atlantic Seaboard* should be followed strictly in the design of the PL rates must be rejected on the basis of the evidence in this case pertaining to United's historic rate operating conditions (*Southern Natural Gas Co.* Op. 379, February 18, 1963). Laclede maintains that the departure from allocated cost is burdening its domestic customers with more than $400,000 in added costs per year. However, as noted by Mississippi River, Laclede's proposal would reduce the demand component Mississippi now collects from its jurisdictional customers by $2,688,689 and would increase the commodity charge by $1,843,133 (Exh. 26, sheet 205). The detriment to United's jurisdictional pipeline customers hardly justifies the limited benefit to Laclede. It is also asserted that the PL–C rate is discriminatory as compared to the DG–C rate. Pipeline service, however, is at a high load factor; whereas town border service is at a low load factor, and covers an entirely different class of service with much smaller volumes.

The Staff pipeline rate proposals are roughly midway between its strict *Seaboard* costs and United's filed PL rates, and would result in an increase in the PL–C commodity charge of less than 2¢ per Mcf over the filed rate. United contends that the Staff does not give sufficient weight to competitive factors and its take-or-pay situation. United, Texas Eastern, and Mississippi rely on the Commission's language in the *Southern* decision, cited *supra*, evidencing its concern for the adverse effect of an increased commodity charge on Southern's industrial sales. The Commission there concluded that:

> The exigencies of this case, and the responsibilities reposed in us by the Natural Gas Act, require that we make every effort to adopt a rate design which will retain a relatively high level of industrial sales in Southern's service area, without imposing a larger than necessary share of demand costs on low load factor distributors, and without unduly burdening the residential and commercial customers served by such distributors. We are of the opinion that staff's Basis No. 4 best accomplishes this result. [Commission Opinion No. 379, p. 39.]

United is justifiably concerned with maintaining its commodity charges at competitive levels. But this record does not support the conclusion that an increase in the PL–C commodity rate in the magnitude proposed by Staff will result in the loss of substantial sales.

Staff's Appendix G [38] shows that with the exception of Texas Eastern, both

---

[38] Competitive pipeline company rates in United's central zone.

Pipeline company	Presently demand per Mcf	Effective rate commodity ¢ per Mcf
United Gas Pipe Line Co. (staff proposal)	1.03	18.26
American Louisiana Pipe Line Co.	3.16	27.0
Natural Gas Pipeline Co. of America	2.40	20.6
Texas Eastern Transmission Corp.	1.60	[1] 15.54
Trunkline Gas Co. (rate schedule P-1)	2.69	26.1
Trunkline Gas Co. (rate schedule G-1)	2.19	27.5
Tennessee Gas Transmission Co.	1.99	21.5
Texas Gas Transmission Corp.	1.49	21.42
Mississippi River Fuel Corp.	2.12	22.63

[1] We do not regard Texas Eastern as a pipeline offering gas effective competition with United for the reason stated at pp. 20–21 of Laclede's brief.

the demand and commodity charges of every other pipeline offering gas in United Central Zone is substantially higher than those proposed by Staff. The substantial new blocks of gas flowing to the Central-Jackson Zones in ever increasing volumes from Southern Louisiana are higher cost gas[39]. Nor does the record indicate that United has lost any pipeline customers during the past three years (Tr. 2037, 2041).

United also emphasizes its $15,340,800 balance for prepayments for gas which it has not taken as of December 31, 1962, and the fact that a low commodity charge will encourage pipelines to take more gas and improve their load factor take from United (Tr. 144). United's pipeline customers already have an average load factor of 85% (Tr. 2075). Moreover, future sales forecasts reflect increasing sales of sufficient volumes to enable United to take 100% of its minimum take-or-pay contract quantities from every producer (Tr. 3497). The record does not establish that a modest increase in the PL–C commodity charge, as proposed by Staff, will result in a significant loss of sales.

Accordingly, I conclude that a substantial deviation from *Seaboard* is justified in determining the appropriate level of the PL demand-charge. The Staff's proposal of $1.03 appears reasonable and, as shown *infra*, will result in a PL–C commodity charge not substantially in excess of the commodity charge reflected in United's filed rate.

The circumstances justifying a deviation to demand in the pipe line rates, however, are not applicable to the DG rates. The substantial tilt to demand in pipeline rates has not been characteristic of town-border rates. In fact, the current effective DG rates are tilted to commodity, and no party appears to urge a deviation to demand in the design of the DG rates. I conclude, therefore, that DG rates should be designed consistent with the *Seaboard* classification of costs. Assuming Staff's unit demand cost, a DG demand charge approximating 45¢ is justified.

United has designed a straight rate under schedules G–C and G–J for small volume town-border service at a level equivalent to 27% load factor use under the DG–C and DG–J rate schedules, respectively. A study of the general load factor characteristics of the G customers shows their average load factor to be about 27%. Staff witness Hahn recommends that the rate level be set at 33⅓% load factor use, noting that these G rates "have traditionally been in the range of 29.5 to 33.8% load factor of the DG rates" (Tr. 845), and that other pipeline companies making similar sales in the same general market area charge a straight volumetric rate equivalent to the average rate in a range of 32 to 67% load factor under their respective general or contract demand rate schedules. Staff witness also points out that setting the G rates on the basis of the G customers' average load factor, as recommended by United, would be an inducement to those customers with a better-than-average load factor to switch to the DG rate to take advantage of a lower average rate, with the result that the average load factor of the remaining G customers would decline, causing further increases in the G rates in subsequent rate determinations. This suggests the desirability of setting the G rates at a level equivalent to a load factor use under the DG rates and somewhat higher than the actual average load factor of the G customers. Staff selection of a 33⅓% load factor is, therefore, approved to maintain stability in the G rate and between G customers.

Appendix C contains Central Zone rates which reflect the foregoing conclusions, based on billing units shown in United's Exhibits 3–5, 3–6, and 11–3, consistent with the 1962 test period as adjusted. These rates will produce Central Zone total jurisdictional sales revenues approximately equal to revenues produced by United's filed rates in this docket. The resulting PL–C commodity charge is 18.16¢ per Mcf, which is 1.62¢ higher than that filed by United and slightly less than that proposed by the Staff. Revisions to the proposed town-border rates may be required to reflect a DG demand-charge equivalent to the *Seaboard* unit demand cost found proper in this proceeding for the Central and Jackson Zones.

---

[39] See Staff Appendix F.

Daily Minimum Take Requirement

United's PL rate schedules include a 72% annual minimum take-or-pay-for provision plus a daily 40% minimum bill provision which requires its customers to take 40% of the maximum daily contract quantities each day or to pay for that minimum quantity of gas. Thus a pipeline customer who did not take his 72% annual minimum because of a failure to take 40% of his maximum daily contract quantity could be billed twice by reason of this single default.

Staff, Laclede, and Southern Natural urge the elimination or revision of the daily minimum take-or-pay requirements of United's tariffs. United's witness Barnett conceded (Tr. 1989–1990) the possibility of double payment, but United argues that this has never occurred and could occur only because of improper operation.

These minimum bill provisions are designed to encourage high load factor purchases and avoid sharp daily swings. There is no justification, however, for imposing penalties which do not bear a reasonable relation to United's exposure to increased costs. Once a purchaser has paid a penalty for a deficiency in its daily minimum bill, there is no sound reason why it should pay a double penalty for the same deficiency in its annual minimum bill. This provision constitutes an undue burden on the purchaser and the consumer with no rational economic justification. Accordingly, the possibility of double payment should be eliminated and United's tariffs provision amended so as to deduct any payment made under the daily deficiency provision from annual deficiencies associated with the same deficient purchase of gas.

Exclusion of Rebuttal Evidence

The order of the Commission prescribing accelerated hearing procedures issued August 6, 1962, provided for the filing of all prepared testimony and proposed exhibits prior to the commencement of the hearing. United's direct case-in-chief was filed and served by August 21, 1962. The Commission Staff and all other parties, including Mississippi River and Southern Union, were directed to serve their testimony and exhibits on or before October 1, 1962. United's rebuttal case was served on all parties on November 19, 1962.

Mississippi River and Southern Union contend that this procedure gave them no opportunity to answer or rebut the rate design testimony of Staff, Laclede and UGI, which proposed a rate design differing substantially from that presented by United and supported by Mississippi River and Southern Union. At various times during the hearing, Mississippi River and Southern Union offered to show by so-called rebuttal evidence the adverse effect of the rate design advocated by Staff, Laclede and UGI, arguing that they had no opportunity in their filing of October 1, 1962, under the Commission's hearing procedure, to answer or rebut the radical rate design departures urged by Staff, Laclede, and UGI. Mississippi's proposed Exhibit 41 and the related testimony of witness Ransom (Tr. 3769) and Southern Union's proposed Exhibits 28–1 and 28–2, and the related testimony of W. Nicol (Tr. 103) were excluded by the Examiner on the ground that their admission would violate paragraph (c) of the Commission's Order of August 6, 1962, and open the door to offers of evidence by other interveners to answer or rebut Mississippi River and Southern Union's proposed rebuttal and the rate design proposals of other interveners, thus changing the hearing from a proceeding on United's rate filing to a hearing on the rates of each of the interveners and the effect of various rate design proposals on their rates. It was also pointed out that permitting individual rebuttal and surrebuttal by each of the interveners would be inconsistent with the objectives of the Commission's accelerated pipeline rate procedure—namely, to shorten the period between the suspension of a proposed pipeline rate increase and the issuance of a Commission opinion allowing or disallowing the proposed increase (Order No. 257, dated November 6, 1962).

Mississippi River and Southern Union contend they have been denied due process and their right to submit rebuttal evidence under Section 7(c) of the Administrative Procedure Act, citing *Interstate Commerce Commission* v. *Louisville and N.R. Co.* 227 U.S. 88 (1913) and *N.L.R.B.* v. *Fairchild Engine and Airplane Co.* 145 F. 2d 214 (1944).

All of United's customers were on notice long prior to the hearing that United's existing rate design was under challenge and would be in issue in this proceeding. The issue was specifically reserved by Laclede in the prior docket No. RP61-18. Moreover, the Commission's order issued July 27, 1962, providing for this hearing stated that United had not fully supported its proposed increased rates and charges in several respects, including ". . . . the level of the demand-commodity components of the proposed rates and charges."

Mississippi River and Southern Union were on notice by August 6, 1962, the date of the Commission's order prescribing hearing procedures, that United's rate design was an issue in this proceeding, that all their proposed testimony and exhibits must be served by October 1, 1962, and that only the pipeline applicant would have the right thereafter to file rebuttal testimony. The evidence Mississippi River and Southern Union sought to introduce at the hearing could have, and should have, been served on or before October 1, 1962. No satisfactory explanation has been presented for their failure to do so or to comply with the Commission's order. In fact, all of the data contained in Mississippi River's excluded evidence already appears in the record with the exception of an estimate of compressor station fuel expenses, and the evidence offered by Southern Union merely repeats and duplicates evidence already in the record in support of United's existing rate design. If admitted, the proffered testimony would not change any of the findings made herein. Accordingly, they are not prejudiced by its exclusion.

The cases cited by Mississippi River and Southern Union in support of their position are inapplicable to the facts presented here. This proceeding relates to United's rates and the Commission's order provides for the presentation of rebuttal testimony by United. Section 7(c) of the Administrative Procedure Act does not authorize any intervener to a rate proceeding to turn the hearing on an applicant's proposed rate increase into a hearing on the rate structure and rate design of all of the many parties who may have intervened. The plan drawn by the Commission in its order prescribing hearing procedure is fair and reasonable and afforded all the interveners, including Mississippi River and Southern Union, full opportunity to support their positions with appropriate evidence and testimony. The procedures prescribed herein reflect a concerted effort on the part of the Commission to improve the conduct of rate proceedings and eliminate undue delay. These efforts should be encouraged (See A Report of the Committee on Rulemaking to the Administrative Conference of the United States, October 2, 1962.)

Pending Motions

Memphis and Staff object to certain[40] of the transcript corrections proposed by United on March 8, 1963, on the ground that they consist of proposed revisions and changes in the testimony of United's witness, E. L. Dunn, rather than errors in the reporting of what the witness actually testified. These objections are sustained for the reasons urged by Staff and Memphis.

There are also pending motions filed subsequent to the close of the hearing by Memphis, Southern Natural Gas Company, Natural Gas Pipeline Company of America, and Staff, for the admission in evidence of written responses to requests for information made during the hearing. The record was kept open to afford all parties an opportunity to file such motions (Tr. 4495–4496).

Memphis offers the following Exhibits in evidence. Appendix A consists of a letter from United dated November 23, 1962, with an attached two-page schedule entitled "Depreciation of Miscellaneous Physical Properties"; Appendix B is a letter from Mr. Thomas Fletcher, United's attorney, dated January 18, 1963; Appendix C consists of a letter dated January 18, 1963 from Mr. Thomas Fletcher, United's attorney, with attached schedule entitled "Gas Plant, Accumulated Provisions For Depreciation And Amortization, And Net Plant March 1962 Through November 1962". United objects to the admissibility of Appendix A on the ground that Memphis had ample opportunity to offer such data during the cross-examination of United's witness, that it is outside the scope of the procedural rule, and is otherwise improper, immaterial, irrelevant, and inadmissible. United also objects to the admissibility of Appendix C for similar reasons. These objections are not persuasive. The proposed exhibits will be received in evidence and designated Exhibit No. 47 (Appendix A); Exhibit No. 48 (Appendix B); and Exhibit No. 49 (Appendix C).

Southern Natural Gas offers in evidence a letter dated January 18, 1963, from United's attorney to Mr. Hugh J. Morgan, Jr. This letter will be received in evidence as Exhibit No. 50. Natural Gas Pipeline offers in evidence a letter dated January 18, 1963, from United's attorney to Mr. Charles C. McDugald. The proposed exhibit will be received in evidence as Exhibit No. 51.

Staff moved for the admission in evidence as Exhibit No. 46 of written information furnished by United in answer to questions asked of United's witness Brooks during his cross-examination by Staff. The material supplied is summarized in United's transmittal letter to Staff dated January 18, 1963. However, Staff's motion states:

> In submitting this material, as a staff exhibit, Staff Counsel neither sponsors this testimony nor concedes that such answers are properly responsive to the questions asked during cross-examination. Accordingly, the relevancy and materiality of these answers as well as any evidentiary inferences to be drawn from the company's failure to responsively answer certain inquiries will be dealt with on brief.

United objects to admission on the ground that Staff is offering this material without any responsibility, sponsorship, or showing of materiality. These objections are well taken and Staff's motion to admit Exhibit No. 46 in evidence is denied.

Summary

The undersigned has found and concluded that:

(1) United Gas Pipe Line Company is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale

---

[40] See Objections to Proposed Transcript Corrections filed March 21, 1963.

which are the subject of this order are sales of gas in interstate commerce, and are subject to the jurisdiction of the Commission.

(2) The proposed increased rates and charges filed by United in this proceeding have not been shown to be just and reasonable or otherwise lawful under the provisions of the Natural Gas Act, and should be disallowed.

(3) The proper test period to be used in this proceeding is the 12 months period ending March 31, 1962, as adjusted for known changes through November 30, 1962, with related sales volumes of 1,292,294,788 Mcf, operating expenses, other than purchased gas, $19,455,133, depreciation $16,305,254, and taxes other than income $6,086,074.

(4) The amount to be included in United's rate base as net working capital for gas prepayments should be reduced by the tax saving arising from the use of such prepayments as a tax deduction.

(5) The proper tax rate to be utilized with respect to the Federal income tax allowance in this proceeding is 49.51%.

(6) United's income tax allowance for cost of service should be reduced by 48% of the investment tax credit actually taken by United for the test year as adjusted.

(7) The depreciation rates used by United in this proceeding, including its use of straight line rather than liberalized depreciation, are proper, do not violate the Natural Gas Act or any existing Commission policy, and do not constitute an abuse of managerial judgment.

(8) The zone by zone method of allocation, (Method 8), approved by the Commission in Docket Nos. G–9547 and G–10592, modified to reflect a "roll-in" of Central and Jackson Zone purchased gas costs, is found to be proper for this docket; however, a departure from such allocation in the design of rates for jurisdictional service is required.

(9) Rates for jurisdictional sales in the Central and Jackson Zones will recover the combined costs allocated to those sales. The level of Central Zone revenues at presently effective rates (substitute rates filed in Docket No. RP63–1) will be maintained, with all decreases in United's jurisdictional Central and Jackson Zone costs, including reductions in purchased gas costs, being first used to decrease Jackson Zone commodity rates until a 3.5¢ per Mcf zone differential is reached. Thereafter, all further decreases in such costs will be reflected *pro rata* so as to maintain the 3.5¢ differential between the Central and Jackson Zones.

(10) The demand charge for pipeline sales in the Central and Jackson Zones (rate schedules PL–C and PL–J) will be $1.03. Large volume town-border service (rate schedules DG–C, DG–T, and DG–J) will have a demand charge equal to the *Seaboard* average unit demand cost hereafter determined for the Central and Jackson Zones. The straight rates for small volume town-border service in the Central and Jackson Zones (rate schedules G–C and G–J) will be equal to the average charge at approximately 33⅓% load factor use under rate schedules DG–C and DG–J, respectively.

(11) The minimum daily bill provisions in United's governing tariffs should be revised to eliminate the possibility of a double penalty for the same default.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission:

(A) Within 45 days from the date of issuance of the Commission's Order herein. United shall file substitute tariff sheets satisfactory to the Commission, containing rates determined in accordance with the principles set forth in this decision and herein found to be just and reasonable;

(B) United shall be required to make appropriate reductions in its rates to reflect the reduction in its cost of service, retroactive to January 1, 1963, together with interest thereon at the rate of 7% per annum from the date of payment to the date of refund, pursuant to the determinations made herein, including appropriate adjustments in its purchased gas costs, working capital, and Federal income tax allowances;

(C) United shall reflect any reductions in the rates paid to its suppliers, including Union, by filing reduced rates of its own, provided however, that (a) the determination of the jurisdictional portion of producer reductions shall be made and shall flow to United's customers in accordance with the zoning, allocation and rate design principles set forth herein; (b) United shall not be obligated to make a rate reduction filing until the amount of producer reductions including Union, aggregates at least one-tenth of a cent per Mcf for United's jurisdictional rates, and United shall not be obligated to make a distribution of such refunds unless the jurisdictional amount to be distributed aggregates at least $400,000;

(D) Within 15 days after making refunds, United shall report to the Commission in writing and under oath the amount of the refunds made and the relevant calculations with respect thereto, together with releases from its jurisdictional customers.

WILLIAM C. LEVY,
Presiding Examiner.

ILLINOIS POWER COMPANY, DOCKET NO. CP64–181

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 15, 1964)

On February 13, 1964, Illinois Power Company (Applicant) filed in Docket No. CP64–181 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its facilities with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in the Village of Keithsburg and environs in Mercer County, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate a distribution pipeline system in the Village of Keithsburg and its environs with a 2.1-mile lateral of 2-inch pipe to connect with a 1.26-mile lateral of 4-inch line extending from the main line of Michigan Wisconsin; the 4-inch line to be constructed by Michigan Wisconsin.

Applicant states that the estimated cost of the proposed facilities is approximately $164,600, which is to be financed from its own funds.

Applicant estimates the volumes of natural gas necessary to meet maximum daily and annual requirements for the first three years of operation as follows:

	First year	Second year	Third year
Daily (Mcf)	298	392	446
Annual (Mcf)	30,476	38,724	45,270

On February 26, 1964, Michigan Wisconsin filed its answer to the subject application consenting to the granting of the application and stating that it can construct the 6,650 feet of 4-inch lateral requested by Applicant at an estimated cost to Michigan Wisconsin of $28,600.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 14, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant, Illinois Power Company, is a public utility duly organized and existing under the laws of the State of Illinois and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Michigan Wisconsin be directed to establish physical connection of its natural gas

transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its daily and annual requirements as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin within one year from the date of issuance of this order.

(5) The requirement that Michigan Wisconsin serve Applicant, as proposed, will not place any undue burden upon Michigan Wisconsin nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its maximum daily and annual requirements of natural gas as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Michigan Wisconsin within one year from the date of issuance of this order.

(C) Michigan Wisconsin shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP64-189

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 15, 1964)

On February 26, 1964, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP64-189 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 600 feet of 3½-inch O.D. pipeline, together with a gas metering station, in Fallon County, Montana, all as more fully set forth in the application aforesaid.

The proposed facilities are for the purpose of receiving and transporting residue gas to be purchased from the plant of Continental Oil Company located in Fallon County, Montana, into Applicant's interstate pipeline system.

The estimated cost of the proposed facilities is $4,250, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 14, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Opinion and order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co. to construct and operate the subject facilities for the purpose stated, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-169

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 15, 1964)

On January 29, 1964, as supplemented on February 24, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP64-169 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon .891 mile of its Yates branch line (of 12¾-inch pipe) in Coweta County, Georgia, and its entire 1.181 mile Arkwright tap line (of 10¾-inch pipe) in Bibb County, Georgia, and meter station buildings and metering and regulating facilities located at terminal points on the respective lines, all as more fully set forth in the application.

On January 31, 1964, Applicant's contract with Georgia Power Company for the purchase and sale of natural gas through the above described facilities was terminated. Applicant has been advised by Georgia Power Company that it has no intention to resume the purchase of gas at either of its power plants and no gas has been purchased from Applicant for use in said plants since November 22, 1962.

The facilities to be abandoned were utilized in the sale of gas to this single customer at these particular locations and will not be required for any other service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 14, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, as supplemented, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment of the facilities by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

The Commission orders:

Permission for and approval of the abandonment by Applicant, Southern Natural Gas Company, of the facilities hereinbefore described be and the same are hereby granted.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION,
DOCKET NO. CP61-328

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 15, 1964)

On March 25, 1964, Transcontinental Gas Pipe Line Corporation (Applicant) filed an application to amend further the Commission's order issued May 17, 1962, in Docket No. CP61-328, as amended, by extending for eighteen months the period of time within which to complete and place in actual operation the facilities hereinbefore authorized, all as more fully set forth in the application to amend on file with the Commission and open to public inspection.

The order of May 17, 1962, as amended, authorized Applicant to construct and operate, among other facilities, 1.5 miles of 16-inch line from Block 131, Platform A, to Block 131, Platform B, together with a meter and regulator station at Platform B, Vermilion Area; and 8.5 miles of 8-inch line from Block 23 to Block 48, together with a meter and regulator station at Block 48, South Marsh Island Area, both offshore Louisiana. Said order provided that the authorized construction should be completed and placed in actual operation within two years from the date of the order's issuance; therefore, the time limitation will expire on May 17, 1964.

Applicant states that the Vermilion Block 131 development is still continuing in the vicinity of Platform B. Further, until this development is materially advanced or completed, Applicant cannot determine when connection to Platform B and construction of the meter station will be required. Similar conditions are said to prevail for Block 48.

Applicant states that, upon the advice of its producers, the requested extension of time will be adequate to enable the above determinations to be made and the construction to be completed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 17, 1962, in Docket No. CP61-328, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 17, 1962, in Docket No. CP61-328, as amended, be and the same is hereby further amended by extending to November 17, 1965, the period of time within which to construct and place in actual operation the facilities heretofore authorized in this proceeding, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-108

FINDINGS AND ORDER AMENDING ORDER ISSUED JANUARY 27, 1964

(Issued May 18, 1964)

On March 18, 1964, Cities Service Gas Company (Applicant) filed an application to amend the Commission's order issued January 27, 1964, in Docket No. CP64-108[1] by authorizing the construction and operation in the Barber County producing area, Kansas, of seven (7) field booster stations consisting of small field compressor units totaling approximately 2,300 horsepower in lieu of the 2,000 horsepower of compression heretofore authorized in this proceeding to be installed at the Alva Compressor Station, Woods County, Oklahoma, all as more fully set forth in the application to amend.

The order of January 27, 1964, authorized Applicant to construct and operate, among other things, 2000 horsepower of compression at the existing Alva Station to enable Applicant to lower the intake pressure of its Barber County Field pipeline at said Station, in order to take gas ratably between the approximately 27 different fields which make up said producing area. Applicant states that up-to-date studies indicate that the Barber Area can be operated with greater flexibility, with better control of over-all production, giving consideration to the variation in pressures existent between the fields within the Area, and for a longer period of time without the need for additional compression, by the installation of the herein proposed 7 field booster stations rather than by the installation of the larger single unit at the Alva Station. The proposed booster stations will be composed of 230 horsepower basic units.*

---

[1] 31 FPC 194-A.

The application indicates that, although the subject proposal will add approximately 300 more horsepower to Applicant's system than was originally certificated, the estimated installed cost of the booster stations will be approximately $76,000 less than the estimated cost of the 2000 horsepower first proposed for the Alva Station.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 14, 1964 (29 F. R. 5100). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 27, 1964, in Docket No. CP64-108 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 27, 1964, in Docket No. CP64-108 be and the same is hereby amended by authorizing the construction and operation in the Barber County producing area, Kansas, of seven (7) field booster stations consisting of small field compressor units totaling approximately 2,300 horsepower in lieu of the 2,000 horsepower of compression heretofore authorized in this proceeding to be installed at the Alva Compression Station, Woods County, Oklahoma, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

DUKE POWER COMPANY, A NEW JERSEY CORPORATION, DOCKET NO. E-7156

ORDER AUTHORIZING DISPOSITION OF FACILITIES

(Issued May 18, 1964)

Duke Power Company, a New Jersey corporation (Duke-New Jersey), filed an application on March 9, 1964, for authorization, pursuant to Section 203 of the Federal Power Act, to merge into Duke Power Company of North Carolina (Duke-North Carolina) with Duke-North Carolina the survivor. Duke-New Jersey is qualified to do business as a foreign corporation in the States of North Carolina and South Carolina. Duke-North Carolina is also authorized to do business in those States. The principal place of business of Duke-New Jersey and Duke-North Carolina, respectively, is at Charlotte, North Carolina. According to the application, Duke-North Carolina has been formed solely for the purpose of providing a means whereby the corporate domicile of Duke could be transferred from New Jersey to North Carolina in accordance with a resolution of Duke-New Jersey's Board of Directors adopted at its regular meeting on October 28, 1963. At its meeting of January 27, 1964, the Board of Directors of Duke-New Jersey authorized the execution of Articles of Merger and Joint Agreement, providing for the merger of the two corporations under the charter of Duke Power Company of North Carolina subject to the ratification and confirmation by the stockholders of Duke-North Carolina and Duke-New Jersey and subject to obtaining the requisite approval of regulatory authorities. On March 4, 1964 the stockholders of Duke-North Carolina and Duke-New Jersey voted to authorize the execution of the Articles of Merger and Joint Agreement. The merger will be carried out in accordance with the terms of the Articles of Merger and Joint Agreement, dated March 4, 1964, between Duke-New Jersey and Duke-North Carolina, which was filed as an exhibit to the application.

---

* Five of the proposed compressor stations will contain one 230 horsepower unit each. Of the remaining two stations one will contain three 230 horsepower units and the other two 230 horsepower units.

On the effective date of the proposed merger, Duke-New Jersey will cease to exist as a corporate entity and Duke-North Carolina upon obtaining regulatory approval will succeed to all licenses, franchises, permits, corporate assets, and tangible and intangible property of Duke-New Jersey and will also assume all debts, liabilities, and obligations of Duke-New Jersey. In addition, each share of Common Stock of Duke-New Jersey outstanding on the effective date of the proposed merger will be converted into a share of Common Stock of Duke-North Carolina and each share of Preferred Stock of Duke-New Jersey outstanding on such effective date will be converted into a share of Preferred Stock of Duke-North Carolina, except that shareholders of Duke-New Jersey dissenting to the proposed merger will be entitled to be paid for their shares in cash. No other consideration will be given in connection with the proposed merger, except that for the redemption of three outstanding qualifying shares of Duke-North Carolina at $100 per share.

Duke-New Jersey is engaged in the generation, purchase, transmission, distribution and sale of electric energy in a territory embracing all or part of 37 counties in North Carolina and 15 counties in South Carolina. It is also the holder of a license from this Commission covering certain hydro-electric facilities designated as Project No. 2232. Other businesses in which Duke-New Jersey is engaged are the operation of local transportation systems in Greensboro and Durham, North Carolina, and in Spartanburg and Anderson, South Carolina, and the operation of water supply systems in Rutherfordton and Spindale, North Carolina, and in Anderson, South Carolina.

On the effective date of the proposed merger, Duke-North Carolina will succeed to the business of Duke-New Jersey and to the ownership and operation of the latter's facilities. In a separate order, issued concurrently herewith, *Duke Power Company and Duke Power Company of North Carolina*, Project No. 2232, the transfer of the license for certain of these facilities from Duke-New Jersey to Duke-North Carolina is approved.

The Applicant states that the change of its corporate domicile from the State of New Jersey to the State of North Carolina should result in improved relations with customers and the public generally. According to the application, substantially all of Duke-New Jersey's property and operations have been located in the States of North Carolina and South Carolina since its organization in 1917 and its principal office is located in the City of Charlotte, North Carolina. The Applicant states further that all of its customers, both corporate and individual, are residents of the States of North Carolina and South Carolina and approximately 60% of its individual stockholders are residents of these two States. Applicant also states that a slight over-all decrease in taxes will be realized by virtue of changing the state of corporate domicile from New Jersey to North Carolina.

As mentioned hereinabove, all assets and liabilities of Duke-New Jersey will be acquired and assumed by Duke-North Carolina on the effective date of the merger. On this date, the same amounts for assets will be recorded on the books of Duke-North Carolina as are recorded on the books of Duke-New Jersey as of the same date.

Written notice of the application has been given to the North Carolina Utilities Commission and the South Carolina Public Service Commission and to the Governor of each of those States. Notice was also published in the Federal Register on March 26, 1964 (29 F.R. 3788), stating that any person desiring to be heard or to make any protest with reference to said application should on or before April 8, 1964, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Duke-New Jersey, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission order issued August 1, 1962, *Duke Power Company*, Docket No. E-7041 (29 FPC 255).

(2) Duke-North Carolina, a North Carolina corporation, will, on the effective date of the proposed merger, as described above, own and operate the facilities of Duke-New Jersey. Duke-North Carolina will be, therefore, a public utility within the meaning of that term as used in Section 201 of the Federal Power Act.

(3) By the proposed transactions as described above, Duke-New Jersey will dispose of the whole of its facilities subject to the jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed disposition of facilities, as recited above, upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons stated above.

The Commission orders:

(A) The proposed disposition by Duke-New Jersey of the whole of its facilities subject to the jurisdiction of the Commission, as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Duke-New Jersey and Duke-North Carolina shall record the proposed transactions and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized and approved are consumated within 60 days from the date of issuance of this order.

(D) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

DUKE POWER COMPANY AND DUKE POWER COMPANY OF NORTH CAROLINA, PROJECT NO. 2232

ORDER APPROVING TRANSFER OF LICENSE

(Issued May 18, 1964)

Joint application was filed on April 8, 1964, pursuant to Section 8 of the Federal Power Act (Act), by Duke Power Company, a New Jersey corporation (Duke Power Company) and Duke Power Company of North Carolina, a North Carolina corporation, for Commission approval of the transfer of the license for Project No. 2232 from the former to the latter. The project is located within the States of North Carolina and South Carolina.

The joint applicants request that the transfer of the license be made effective as of the effective date of the proposed merger of Duke Power Company into Duke Power Company of North Carolina.

In a separate order issued concurrently herewith, Duke Power Company and Duke Power Company of North Carolina, Docket No. E-7156, the disposition by Duke Power Company of the whole of its facilities to Duke Power Company of North Carolina is approved.

The Commission finds:

(1) The proposed transferee is a corporation organized under the laws of the State of North Carolina, is authorized to do business in the States of North Carolina and South Carolina, and as evidence of its compliance with all applicable state laws, will submit: a copy of the order of the Public Service Commission of the State of South Carolina and of the Utilities Commission of the State of North Carolina, respectively, approving the merger transaction by which the transfer will be accomplished; also proof of transfer to it by merger of the project properties and of all of the rights held by Duke Power Company under state law for the location of the licensed project involved on the beds and banks of streams and all water rights in connection therewith; and all rights to engage in the business of developing, transmitting and distributing power, and all rights to conduct businesses which may be necessary for carrying out the purposes of the license for Project No. 2232.

(2) Approval of transfer, upon the conditions set forth herein, of the license for Project No. 2232 to the proposed transferee will not be inconsistent with the public interest.

The Commission orders:

(A) The transfer of the license for Project No. 2232 from Duke Power Company to Duke Power Company of North Carolina is hereby approved, effective as of the effective date of the proposed merger referred to above, subject to section 9.3 of the Commission's regulations under the Federal Power Act, and subject to the further condition that the net invesment in the project shall not be increased on account of the transfer; provided that the transferee shall be subject to all of the provisions of the Act to the same extent as though it were the original licensee for the project.

(B) The transferee shall report to the Commission the effective date of the merger referred to above within ten days of such date.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CITY OF SEATTLE, WASHINGTON, PROJECT NO. 553

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued May 19, 1964)

On March 25, 1963, the City of Seattle, Washington, licensee for Project No. 553, filed for Commission approval certain revised project Exhibit K tracings. By letter of September 10, 1963, the licensee requested the staff to make certain changes on Exhibit L (FPC No. 553-200) on file with the Commission. The project is situated on the Skagit River in Whatcom County, Washington, and affects lands of the United States within the Mount Baker National Forest.

The revisions to the Exhibit K tracings show the revised project boundary as occupied by the constructed project works. The changes made by the staff on the Exhibit L shows the removal of the project boundary line which should not have been shown on that exhibit and depicts the Happy-Creek-Ross Lake Diversion Tunnel as constructed.

Commission approval of the revised exhibits will result in an adjusted increase in the lands of the United States occupied by the project of 14.93 acres and an increase in the annual charges for such occupancy in the amount of $38.84.

The entire project is now complete except for possible raising of Ross dam to the ultimate height originally contemplated which would extend the pool in British Columbia. There have been several license amendments and Commission orders approving changes in the project works. For convenience, we are herein setting forth a new Article 2 describing the project as it now exists, together with the project exhibits relating thereto.

The Commission finds:

(1) Revised Exhibit K (FPC Nos. 553-196 through -199, and -201) and revised Exhibit L (FPC No. 553-200) conform to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) Exhibit K (FPC Nos. 553-79, -80, -81 and -174) and Exhibit L (FPC No. 553-195), now part of the license and which has been superseded, should be eliminated from the license for the project.

(3) The increased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 553, and the exhibits described in finding (2) above are hereby eliminated from the license for the project.

(B) Article 2 of the license as revised is hereby further revised to read as follows:

Article 2. The project covered by and subject to this license is located in and along Skagit River and on lands of the United States in Mt. Baker National Forest and consists of:

A. All lands constituting the project area and enclosed by the project boundary, and/or interests in such lands necessary or useful for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary

being more fully shown and described by certain exhibits which accompanied the applications for license and amendments thereof and which are designated and described as follows:

D. All other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and located within the project area, including such portable property as may be used and useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that inclusion of such property as a part of the project works is approved or acquiesced in by the Commission; also, all other rights, easements, or interests, the ownership, use, occupancy or possession of which is necessary or appropriate in the maintenance and operation of the project or appurtenant to the project area.

(C) Article 24 of the license is hereby revised to read as follows:

Article 24. The Licensee shall pay to the United States the following annual charges:

(a) For the purpose of reimbursing the United States for the cost of administration of Part 1 of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations, in effect from time to time. The authorized installed capacity for such purposes is 832,000 horsepower.

(b) Effective January 1, 1964 for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, other than those used for transmission lines only, $1,830.89, and

(c) Effective January 1, 1952, for the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission lines only, $320.40.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. RP64-34

ORDER PERMITTING REVISED TARIFF SHEETS TO BECOME EFFECTIVE AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued May 19, 1964)

South Georgia Natural Gas Company (South Georgia) on April 13, 1964, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Original Volume No. 1.[1] The proposed changes in rates and charges would make effective as of January 1, 1964, a reduction in South Georgia's jurisdictional rates in the amount of approximately $187,500 based upon sales for the calendar year 1962, adjusted.[2] In addition, South Georgia proposes to change the availability of Rate Schedules G-1 and I-1, and proposes to make further rate reductions and to pass on to its customers the refunds and rate reductions of its sole gas supplier, Southern Natural Gas Company (Southern), as summarized in part below.[3]

---

[1] Second Revised Sheet No. 4, Tenth Revised Sheet No. 5, Ninth Revised Sheet No. 6, Sixth Revised Sheet No. 9, Fifth Revised Sheet No. 11, and Fourth Revised Sheet No. 12B.

[2] South Georgia proposes to refund, without interest, the difference between the amounts collected for deliveries since January 1, 1964, and the amounts that would be collectible under the rates herein made effective.

South Georgia's rate reduction proposal has resulted from conferences commencing in January 1964, with representatives of its customers, the Georgia Public Service Commission, and the Commission staff. The conferences were initiated by letter of the Executive Director on June 24, 1963, as a sequence of the staff's review of reports filed by South Georgia.

The proposal is summarized in part, as follows:

(1) Effective as of January 1, 1964, South Georgia's jurisdictional rates shall be reduced to the levels set forth in Appendix A hereto; and effective as of April 1, 1964, South Georgia will file further rate reductions to reflect the reductions set forth in Appendix A hereto.

(2) South Georgia's proposed reduced rates to become effective as of January 1, 1964, reflect a reduction in its jurisdictional cost of service by the amount of approximately $187,564 annually, based upon its operations during the calendar year 1962, as adjusted. The adjustments include changes in sales projected by South Georgia based upon the proposed changes in availability of the G–1 and I–1 rate schedules (summarized in paragraph (3) herein).

(3) The availability of firm deliveries under the G–1 schedule will be increased from 3000 to 3500 Mcf per day and the currently imposed minimum volumetric limitation on service under the I–1 schedule will be eliminated. As a result of these two changes, South Georgia estimates that its total cost of purchased gas will be increased by the net amount of $20,881 annually.

(4) The proposed rates to become effective as of January 1, 1964, give effect to the recent reduction in the Federal corporate income tax rate from 52 to 50 percent. South Georgia proposes to further reduce its rates on January 1, 1965 by $11,749 annually, to reflect the further reduction in the tax rate to 48 percent, as follows:[4]

Rate schedule	*Reduction/Mcf*
G–1	0.30
G–2 (demand charge)	4.00
AC–1	0.13

(5) South Georgia proposes to make an additional refund to its jurisdictional customers in the amount of $20,000 on a volumetric basis as a flowthrough of a portion of refunds received from its supplier, Southern, applicable to the period June 1, 1960, through August 31, 1961, pursuant to Opinion No. 379, *Southern Natural Gas Company*, 29 FPC 323, Docket Nos. G-20509, RP60–15.

(6) In the event that the reduction in rates proposed by Southern, in Docket No. RP64–31, becomes effective as of April 1, 1964, South Georgia will file a reduction in its rates as set forth in Appendix A hereto to become effective as of April 1, 1964. The reduction in South Georgia's jurisdictional cost of service to reflect Southern's proposed rate reduction as of April 1, 1964, is $16,647.

(7) In the event that South Georgia shall hereafter receive any refunds from Southern applicable to the rate periods commencing on and after April

---

[3] South Georgia states that, with the annual effect of additional provisions of its proposal, the total adjustment in its revenues and costs is $223,959, as of April 1, 1964.

[4] In addition to these reductions reflecting the 48 percent tax rate in its cost of service, South Georgia will also pass through the similar reduction by its supplier, Southern, on January 1, 1965, as a future rate reduction referred to in paragraph (7) herein.

16, 1958, South Georgia shall promptly pass on to its jurisdictional customers the portions of such refunds reflected by their respective purchases of gas. In the event that Southern's rates to South Georgia are reduced in Docket No. RP64–31 in addition to the proposed April 1, 1964 reduction mentioned above, South Georgia will make equivalent reductions in its jurisdictional rates (computed on the basis of 73.43 percent of any reduction in demand costs and 40.89 percent of any reduction in commodity costs utilizing adjusted purchases reflected in Appendix B hereto).

(8) South Georgia's proposal also provides that it is expressly conditioned upon the Commission's acceptance of all the terms and conditions of its proposal; that it is submitted without prejudice and without agreement as to principles and methods; that it shall terminate on the effective date of a change in rates based upon either a filing by South Georgia or a Commission order resulting from any future investigation of its rates. South Georgia requests that the Commission waive compliance with the requirements of the Commission's rules and regulations, particularly Part 154 thereof, to the extent necessary to permit the proposed changes to become effective as provided in the proposal.

South Georgia on April 13, 1964, served copies of the proposal and the related cost-of-service studies upon its customers and interested State commissions. Notice of the filing was published in the Federal Register on April 22, 1964, stating that comments upon the proposal might be filed on or before May 5, 1964. The Gas Section, Georgia Municipal Association, representing substantially all the customers, by letter dated April 28, 1964, strongly urged acceptance of South Georgia's proposal. No other comments or objections have been filed.

The Commission finds:

(1) Good cause exists for waiving the 30-day notice and other requirements of Part 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

(2) The proposed revised tariff sheets, the rate reductions therein contained and South Georgia's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30-day notice requirement and other provisions of Part 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets described herein are accepted for filing to become effective as of January 1, 1964, subject to the terms and conditions of this order.

(B) South Georgia shall comply with each of the provisions of its agreement and rate-reduction proposal, including the provisions relating to future refunds and rate reductions. Within twenty days of making refunds in accordance with its agreement, South Georgia shall report to the Commission, in writing and under oath, the amounts of such refunds so paid, together with a computation showing the manner in which each refund was determined, and shall serve a copy of such report upon each customer receiving a refund, and upon interested State commissions.

(C) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without

prejudice to any claims or contentions which may be made by the Commission, South Georgia Natural Gas Company, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against South Georgia Natural Gas Company or any other persons or parties affected by this order.

APPENDIX A

South Georgia Natural Gas Company, Docket No. RP64–34

PRESENT RATES AND PROPOSED RATES

Rate schedule	Present rates	Proposed Rates*	
		Jan. 1, 1964	Apr. 1, 1964
G–1	55.78¢	54.0¢	53.60¢
G–2:			
Demand charge	$3.60	$3.08	$3.02
Commodity charge	31.5¢	31.5¢	31.5¢
I–1	34.0¢	32.5¢	32.5¢
I–2	34.0¢	33.0¢	33.0¢
AC–1	43.63¢	41.63¢	41.43¢

*The proposed rates are to be further reduced on Jan. 1, 1965 to reflect a reduction from 50 percent to 48 percent in the Federal corporate income tax rate with respect to both South Georgia and its supplier, Southern Natural Gas Co.

APPENDIX B

South Georgia Natural Gas Company, Docket No. RP64–34

COST OF SERVICE AND ALLOCATION YEAR (1962) ADJUSTED

Particular	Total	Demand	Commodity
Cost of service:			
Gas purchased	$4,413,133	$810,880	$3,602,253
Operation and maintenance expenses	443,894	222,568	221,326

Taxes other than income	81,986	40,993	40,993
State income taxes	12,281	6,141	6,140
Federal income taxes	144,313	72,156	72,157
Return at 6%	512,048	256,024	256,024
Total cost of service	5,896,163	1,553,016	4,343,147
Allocation of cost of service:			
Jurisdictional percentage		73.43%	40.89%
Jurisdictional cost of service	2,916,293	1,140,380	1,775,913
Jurisdictional revenue (at present rates)	3,103,857		
Excess	187,564		
Rate reduction filed	187,546		

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SUNRAY DX OIL COMPANY, DOCKET NO. G-13422, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACTUAL AMENDMENTS, TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued May 20, 1964)

On March 6, 1964, Sunray DX Oil Company (Sunray) submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in these proceedings. Subsequently, the Philadelphia Gas Works Division of the United Gas Improvement Company (PGW), an intervener in certain of these proceedings, filed its opposition to the offer of settlement. On March 10, 1964, Sunray amended its offer, and on April 9, 1964, PGW withdrew its opposition to the offer. The offer, as amended, relates to thirteen sales of natural gas to Texas Eastern Transmission Corporation (TETCO) in Texas Railroad Commission Districts Nos. 1 and 2, and in North Louisiana.

Under the terms of the amended offer, Sunray proposes to delete the favored nation and price redetermination provisions from the subject rate schedules, and to amend the periodic escalation provisions therein so as to provide for no increase in rate under the FPC Gas Rate Schedules for the sales made by it in Texas until February 5, 1968.[2] It will delete all escalation provisions from its rate schedules for the sales made in Louisiana. Sunray will refund the difference between the revenues charged and collected and those which would have been received under the proposed settlement rates, with applicable interest in Docket No. RI64-172.

In support of its offer, Sunray cites the deletion of the favored nation provisions from its gas sales contracts, amendment of its periodic price escalation clauses, refunds, moratorium periods, and other provisions not specifically noted herein, as being in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

Since the proposed settlement rates are acceptable under the provisions of the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended, the public interest will best be served by accepting Sunray's proposed amended offer of settlement, as conditioned herein. Our action herein shall not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, or other similar proceedings, involving each of Sunray's rates and rate schedules.

The Commission finds:

The proposed settlement of the proceedings herein, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Sunray on March 6, 1964, as amended on March 10, 1964, and herein conditioned, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter ordered.

---

[1] The additional dockets involved herein are set forth in the Appendix hereto.

[2] Sunray has filed executed contract amendments effectuating this part of its proposal.

The Commission orders:

(A) The offer of settlement filed with the Commission by Sunray on March 6, 1964, as amended on March 10, 1964, is hereby approved in accordance with the provisions of this order.

(B) Sunray shall file, within 45 days from the date of issuance of this order, notices of change in its FPC Gas Rate Schedules set forth in the appendix hereto, reflecting the settlement rates shown therein and executed contractual amendments to its FPC Gas Rate Schedule Nos. 122, 126 and 127, which Sunray shall execute with its purchaser in conformity with Sunray's offer of settlement, as amended, in all respects, in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act; the contract amendments filed by Sunray to its Rate Schedule Nos. 8, 10, 27, 29, 31, 32, 33, 121, 125 and 168 are hereby accepted and made effective as of the date of issuance of this order.

(C) Sunray shall refund in Docket No. RI64–172 to TETCO to the date of the issuance of this order the difference between the rates collected subject to refund under each of the rate schedules herein and the related settlement rates and shall report to the Commission in writing, within 45 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination.

(D) Upon notification by the Secretary of the Commission that Sunray has complied with the terms and conditions of this order, the settlement rates set forth in the appendix hereto shall be effective as of the date of issuance of this order, and the proceedings in Docket Nos. G–13422, G–15419, G–15420, G–16649, G–19776, RI61–104, RI62–30 and RI62–55 shall be deemed terminated insofar as such proceedings pertain to sales made by Sunray under the rate schedules involved therein, and the proceedings in Docket Nos. RI63–91 and RI64–172 shall be terminated insofar as they pertain to sales made under Sunray's Rate Schedule Nos. 122, 126 and 127.

(E) Upon notification by the Secretary of the Commission in accordance with Paragraph (D) above, Docket Nos. G–15419 and G–15420 shall be severed from the consolidated area rate proceeding in Docket No. AR64–2 without further order of the Commission.

(F) The acceptance by the Commission of Sunray's amended offer of settlement is without prejudice to any findings or determinations that may be made in any proceedings now pending, or hereafter instituted by or against Sunray, including area rate or other similar proceedings.

[5] Basic contract dated Apr. 12, 1956, with a 20 year primary term.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CAROLINA PIPELINE COMPANY, COMPLAINANT v. SOUTHERN NATURAL GAS COMPANY, RESPONDENT, DOCKET NO. RP63-4

ORDER DENYING APPLICATION FOR REHEARING AND FOR LEAVE TO ADDUCE ADDITIONAL EVIDENCE

(Issued May 22, 1964)

On April 24, 1964, Carolina Pipeline Company (Carolina) filed an application for rehearing[1] of the Commission's Opinion No. 423 and accompanying order issued March 30, 1964, in this proceeding. Carolina requests that we set aside Opinion No. 423 and accompanying order and require Southern Natural Gas Company (Southern) to provide Carolina service under Southern's Rate Schedule CD-3, rather than under Southern's Rate Schedules CDL-3 and AOL-3. Alternatively, Carolina requests that we permit it to adduce additional evidence to support this request.

We find no merit to either of these requests and shall deny Carolina's application. Basically, the matters argued by Carolina to support setting aside Opinion No. 423 and permitting Carolina to receive CD-3 service are disposed of by that opinion.

As to the request for leave to adduce additional evidence, by order issued April 3, 1964, we denied an earlier motion filed by Carolina on March 3, 1964, requesting that we reopen this proceeding to permit Carolina to introduce evidence relating to incidents of alleged discrimination by Southern which Carolina says took place in February, 1964. Some of those same alleged incidents of discrimination are again cited to support Carolina's instant request for leave to adduce additional evidence. What we said in our April 3, 1964 order, is still applicable to these and the other matters cited by Carolina—namely, any matters not disposed of in Opinion No. 423 which Carolina believes are a basis for a further complaint against Southern should be the subject of a new complaint rather than a vehicle for reopening and extending a case in which a final decision has been issued after a full hearing and on a complete record. See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 606 (CA3, 1956).

---

[1] An application for rehearing tendered for filing by the Natural Gas Authorities of York, Lancaster, and Chester Counties, South Carolina, on April 30, 1964, was rejected by the Commission's Secretary because it was not filed within the statutory time limit of 30 days as provided by Section 19(a) of the Natural Gas Act.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in Carolina's application for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 423 and accompanying order, or which, having now been considered warrant any change in, modification of, or rehearing of such Opinion and order.

(2) Carolina's request for leave to adduce additional evidence should be denied.

The Commission orders:

The application for rehearing and for leave to adduce additional evidence, filed by Carolina Pipeline Company on April 24, 1964, in the above-entitled proceeding, is hereby denied.

Commissioner Ross *dissenting* for the reasons set forth in his dissenting statement to Opinion No. 423 issued March 30, 1964, 31 FPC 705 at 710.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–116; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–122

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1964)

El Paso Natural Gas Company (El Paso) filed in Docket No. CP64–116 an application on November 22, 1963, and a supplement thereto on February 27, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of a new point of interconnection and a dual 8⅝-inch O. D. standard orifice type meter station with appurtenant facilities in the NW/4 of Section 19, Block 77, PSL Survey, Winkler County, Texas, and (2) the transportation and exchange of up to 50,000 Mcf of natural gas daily with Northern Natural Gas Company (Northern), all as more fully set forth in the application and supplement on file with the Commission.

Northern, filed in Docket No. CP64–122, an application on November 29, 1963, and a supplement thereto on March 2, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new point of interconnection and a 10-inch valve setting on its existing 16-inch pipeline located in Winkler County, Texas, and the transportation and exchange of natural gas with El

Paso of up to 50,000 Mcf of natural gas daily, all as more fully set forth in the application and supplement on file with the Commission.

El Paso and Northern by letter agreement filed February 21, 1964, (dated February 18, 1964) amended their original letter agreement filed October 24, 1963, (dated October 7, 1963), so as to provide for a transportation charge of two-tenths of one cent (0.2¢) per Mcf to be paid by El Paso on all quantities of gas delivered to Northern for transportation under the original letter agreement filed October 24, 1963.

The Commission on April 10, 1964, issued temporary certificates to El Paso and Northern authorizing the construction and operation of facilities, and the rendering of the service proposed in their respective applications as supplemented, and accepted for filing Northern's Rate Schedule T-2 filed March 2, 1964, effective April 10, 1964.[1]

The applications of El Paso and Northern indicate that El Paso due to operating conditions on its system takes large quantities of casinghead gas from the Permian Basin area during the first part of each month and for the remainder of the month due to the exhaustion of Texas Oil Producing Days and period of peak demand must rely heavily on dry gas purchases to meet its system requirements. To improve the supply situation of El Paso, West Texas Gathering Company, Northern and El Paso have entered into the proposed arrangement whereby West Texas will deliver to Northern at an existing delivery point up to 50,000 Mcf daily for the account of El Paso, and Northern will deliver said quantity to El Paso at a point where the pipelines of Northern and El Paso cross in Winkler, Texas. Presently utilized facilities of West Texas are incapable of handling the volumes required by El Paso.

The total estimated cost of the facilities required by El Paso and Northern is $21,540, to be paid for by El Paso, of which $6800 will be for facilities of Northern. The cost of the facilities will be defrayed from El Paso's current working funds, supplemented, if necessary, by short-term bank loans.

After due notice no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, as supplemented, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(3) The proposed exchange and delivery of natural gas between Northern and El Paso, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as

---

[1] Letter agreement with El Paso dated October 7, 1963, as amended by letter dated February 18, 1964, as a special operating agreement.

more fully described in the applications and exhibits as supplemented in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas, construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Northern and El Paso are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Northern's and El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Northern and El Paso in these proceedings, authorizing the exchange and delivery of natural gas, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the applications, as supplemented, and exhibits filed in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon Northern's and El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 6 months from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64–208

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1964)

On March 19, 1964, Lone Star Gas Company (Applicant) filed in Docket No. CP64–208 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 13.0 miles of 6-inch pipeline together, with metering facilities, to be located in Harmon and Jackson Counties, Oklahoma all as more fully described in the application on file in this proceeding.

Applicant proposes to use the proposed facilities for the purpose of transporting natural gas from its interstate pipeline system to the Republic Gypsum

Company Plant where an estimated annual volume of 498,000 Mcf of gas will be sold on an interruptable basis.

The estimated total cost of the proposed facilities is $181,520 which will be financed from current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12-months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PENNSYLVANIA GAS COMPANY, DOCKET NO. CP64-199

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1964)

On March 9, 1964, as amended March 13, 1964, Pennsylvania Gas Company (Applicant) filed in Docket No. CP64-199 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 9.3 miles of 12-inch pipeline extending from Sugar Grove Township in Warren County, Pennsylvania, to the City of Jamestown in Chautauqua County, New York, all as more fully described in the application.

The estimated cost of the proposed facilities is $380,500 to be financed through Applicant's parent company, National Fuel Gas Company, as a part of Applicant's 1964 construction program costing $2,863,000.

Applicant states that the purpose of the proposed facilities is to provide sufficient capacity to meet the needs of the normal increase in gas demands in the Jamestown area.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Pennsylvania Gas Company, a Pennsylvania corporation having its principal place of business in the Borough of Warren, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-370 (3 FPC 868).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the installation and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Pennsylvania Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12-months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-205

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1964)

On March 16, 1964, Transcontinental Gas Pipe Line Corporation (Applicant), filed in Docket No. CP64-205 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the twelve-month period commencing on the date of issuance of such authorization and the operation of minor lateral and field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The total cost of the proposed facilities will not exceed a maximum of $2,000,000, and no single project will exceed a cost of $500,000, which costs are to be financed by cash on hand or by short term bank loans.

The purpose of this "budget-type" application is to enable Applicant to establish additional connections in fields from which Applicant is already authorized to receive gas where it is not possible to construct facilities under the exemption provided by Section 2.55(d) of the Commission's Rules, to provide necessary booster compressor facilities in such fields, and to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed hereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct during the 12-month period commencing on the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-215

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1964)

On March 25, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-215 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 0.6-mile of 4-inch pipeline together with orifice meter station and appurtenant facilities, to be located in Hancock County, Mississippi, all as more fully described in the application.

The purpose of the proposed facilities is to enable Applicant to sell and deliver natural gas to the Mississippi Test Facility of the National Aeronautics and Space Administration for use by said facility.

The estimated cost of the proposed facilities is $39,668 and during the third year of operation Applicant will sell and deliver approximately 754,932 Mcf of natural gas to the Mississippi Test Facility. The cost will be financed from current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Appli-

cant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company to construct and operate facilities for the transportation and delivery of natural gas in interstate commerce as hereinafter described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, within 12-months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-113

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 26, 1964)

On November 18, 1963, as supplemented on April 17, 1964, Natural Gas Pipeline Company of America (Applicant) filed an application in Docket No. CP64-113, pursuant to Section 7(c) of the Natural Gas Act, as amended, for a certificate of public convenience and necessity authorizing construction and operation of additional facilities at its Herscher and Cooks Mills storage areas to increase the total maximum day withdrawal capacity thereof by 75,000 Mcf to a total of 950,000 Mcf and to provide an increase of the maximum peak-hour withdrawal capacity from 43,750 Mcf to 47,500 Mcf, all as more fully set forth in the application.

The additional facilities proposed are:

Cooks Mills

Five (5) injection-withdrawal wells in the Cypress formation.

7100 linear feet of 12-inch field pipeline.

2200 linear feet of 8-inch field pipeline.

Two (2) 850 H.P. gas compressors.

Additional cushion gas, measuring and dehydration equipment and other miscellaneous facilities necessary or convenient to the operation of the above described and existing facilities.

Herscher

Six (6) injection-withdrawal Galesville reservoir wells.

8400 linear feet of 30-inch field pipeline.

660 linear feet of 12-inch field pipeline.

3300 linear feet of 10-inch field pipeline.

One (1) 7500 H.P. turbine compressor unit.

Additional cushion gas, measuring and dehydration equipment, and other miscellaneous facilities necessary or convenient to the operation of the above-described and existing facilities.

The total estimated cost of the proposed facilities, including the cushion gas, measuring and dehydration equipment and other miscellaneous facilities, is stated to be $4,221,400.

On April 17, 1964, Applicant filed a statement with the Secretary stating it would accept a certificate limiting the maximum volume inventory in each field and storage reservoir as follows:

Field	Reservoir	Volume (Mcf @ 14.65 psia)
Herscher	Galesville	45,000,000
Herscher	Mt. Simon	45,000,000
Cooks Mills	Cypress and Rosiclare	5,000,000

Applicant intends to allocate all the additional peak-day capacity to its customers in accordance with the procedure of allocation set forth in its FPC Gas Tariff now on file.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, as amended, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its opinion and order of May 10, 1946, in Docket Nos. G–651 and G–664 (5 FPC 111).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate is further conditioned to limit the maximum volume inventory in each storage reservoir in the respective fields as follows:

Field	Reservoir	Volume (Mcf @ 14.65 psia)
Herscher	Galesville	45,000,000
Herscher	Mt. Simon	45,000,000
Cooks Mills	Cypress and Rosiclare	5,000,000

(D) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64–165

ORDER DENYING INTERVENTION

(Issued May 26, 1964)

On January 24, 1964, Tennessee Gas Transmission Company (Tennessee) filed with this Commission an application for a certificate of public convenience and necessity in Docket No. CP64–165 seeking authorization to construct and operate facilities in order to increase its capacity to deliver up to an additional 62,060 Mcf/d (at 14.73 psia) to its existing contract demand, general service and storage service customers. All of the proposed facilities would be located along Tennessee's existing main transmission lines which extend in a northeasterly direction from sources of supply in Texas and Louisiana to New York and New England.

On March 16, 1964, El Paso Natural Gas Company (El Paso) and on March 23, 1964, Transwestern Pipeline Company (Transwestern)[1] filed petitions to intervene in the above-named docket. Petitioners allege that the instant application and the proceedings in Transwestern Pipeline Company, *et al.*, Docket No. CP63–204, *et al.*, in which El Paso, Transwestern and Gulf Pacific Pipeline Company (Gulf Pacific)[2] are each seeking to serve the southern California market, are interconnected and interdependent, and that, therefore,

---

[1] Jointly referred to as "Petitioners."

[2] Gulf Pacific is a wholly owned subsidiary of Tennessee.

Petitioners should be granted leave to intervene in the instant docket. Petitioners allege by way of their claim to standing that there is a direct connection between the two proceedings concerning three separate aspects: (1) rates, (2) financing, (3) reserves. They further allege as the substantive grounds they wish to discuss in the hearing that there is a "conflict of regulatory principle" between the instant application and prior Commission decisions.

We do not believe that either of the petitioners have standing to intervene in the instant proceeding on Tennessee's expansion application. Their only possible interest is as competitors or potential competitors of Tennessee's subsidiary Gulf Pacific. Petitioners and Tennessee itself do not presently serve any of the same customers nor do Petitioners allege that they contemplate expanding into the area in which Tennessee now serves. The sole basis for a claim of interest thus is that grant or denial of the present application will in some measurable degree affect Petitioners through the indirect effect of such a grant upon Gulf Pacific with which Petitioners are in competition for additional service to Southern California.

It is suggested in the petitions that the instant application and that of Gulf Pacific in the consolidated Transwestern proceeding are interrelated because of the effect the grant or denial of the Gulf Pacific application might have on Tennessee's qualifications here. But any such effect is of no concern to Petitioners. In our consideration of the present Tennessee application we will not, of course, assume that the Gulf Pacific application will either be granted or denied. Tennessee will have to support its application without regard to any additional financial resources or gas reserves which might be available to it if the Gulf Pacific application be denied, and upon the assumption that any losses which may accrue to it from denial of its subsidiary's application cannot subsequently be made up by way of increase in Tennessee's rates to its interstate wholesale customers.

The question for resolution here then is: Can a grant of the instant application be expected to have any measurable effect upon Gulf Pacific's ability to compete with Petitioners. It is suggested that in some unspecified manner it may affect Gulf Pacific's rates. We do not see how this is possible, for the two pipelines are both separate corporate entities and seperate physical pipeline systems. An expansion by Tennessee which, despite indications to the contrary, proves to be uneconomic could conceivably adversely affect Tennessee's rate structure. However, any loss resulting from an uneconomic expansion of the Tennessee system could not affect the rates for any Gulf Pacific system we might decide to certificate. These rates (to the extent they are subject to our jurisdiction) will be fixed solely with reference to the cost of service and approved rate base of the Gulf Pacific Company.

Equally unpersuasive is the claim that action on the instant Tennessee application could affect the financing of Gulf Pacific. The latter company's prospective financial structure, in the event it secures a certificate, has already been established and is totally independent of our action on the present application. Nor can it be seriously argued that Tennessee's commitments to the expansion program here in issue would materially affect Gulf Pacific's competitive position vis a vis Petitioners should we be inclined to condition any certificate we might issue to Gulf Pacific upon modification of its capital structure in a manner calling for additional financing by its parent. But the short answer to Petitioners' contention is that in the event of such an untimely eventuality their position would be *enhanced* not impaired, and they would not be aggrieved or adversely affected by the grant to Tennessee.

Finally, it is clear that the Tennessee expansion and the Gulf Pacific application have no physical relationship with one another. The gas reserves committed to the Gulf Pacific project, and upon which it must rely in its competition with Petitioners, are not available to Tennessee and are in no way part of the reserve picture upon which Tennessee is relying to support the present application. If Tennessee's reserves are inadequate it must either secure new ones or forego its instant expansion. Even assuming that Tennessee will have to secure new reserves and could and would do so by sequestering to itself some of Gulf Pacific's reserves now committed to the Gulf Pacific project, this will not harm Petitioners in their competition with Gulf Pacific.

In short the grant or denial of Tennessee's certificate application cannot adversely affect Petitioners in their competition with Gulf Pacific—their only claim to injury.

While this is sufficient to dispose of the applications for intervention, it may be appropriate to note that neither of the substantive issues Petitioners wish to interpose if intervention is granted, involves relevant legal or factual questions which, in the absence of Petitioners' intervention, would go unresolved. We are not concerned here with how Tennessee chooses to meet the subject of consolidated taxes since the rates it (and its subsidiary Gulf Pacific) propose to charge are not here in issue. In a rate case we shall, of course, apply whatever regulatory principles may be applicable in the circumstances regardless of Tennessee's desires on the subject.

The question of whether an incremental reserve showing is sufficient to support the incremental requirements is a matter for our consideration in the certificate proceedings, though Petitioners err in asserting that such a showing has never been found to be sufficient.[3] But it is peculiarly a matter within regulatory discretion which would hardly form the basis for any successful review proceeding, even if Petitioners had the requisite standing under Section 19 of the Act to seek review, as they do not. Nor is it a matter in which Petitioners have any special competence or knowledge which might justify us in exercising such discretion as we might possess to admit as parties persons without any cognizable interest in the proceeding.

The Commission orders:

The intervention in the above-entitled proceeding sought by El Paso Natural Gas Company and Transwestern Pipeline Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–107

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 26, 1964)

On November 8, 1963, as amended on February 28, 1964, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64–107 an application pursuant to Section 7 of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to increase contract demand service to existing customers by 100,491 Mcf per day (14.73 psia) commencing with the 1964–65 and 1965–66 winter heating seasons, all as more fully set forth in the application, as amended.

---

[3] In *Tennessee Gas Transmission Company*, Docket No. CP63–247, 29 FPC 1000, and *Texas Gas Transmission Corp.*, Docket No. CP63–214, 29 FPC 1084, the reserve showings were presented on an incremental basis.

Applicant proposes to construct and operate, over a two year period, the following facilities:

(1) Approximately 34.59 miles of 30-inch loop pipeline in Louisiana, Mississippi, Tennessee and Kentucky;

(2) Approximately 19.04 miles of 26-inch loop pipeline in Louisiana;

(3) One 30-inch Tennessee River Crossing in Kentucky;

(4) 2,100 compressor horsepower in the Bastrop, Louisiana, Compressor Station by turbo-charging three existing 2,000 horsepower compressor units to 2,700 horsepower each;

(5) One 8,000 horsepower compressor unit in the Columbia, Louisiana, Compressor Station;

(6) One 4,800 horsepower compressor unit in the Pineville, Louisiana, Compressor Station;

(7) One 8,000 horsepower compressor unit in the Kenton, Tennessee, Compressor Station, and,

(8) Two 550 horsepower compressor units in the Leesville, Indiana, Compressor Station for additional development of the Leesville Storage Field.

In addition, Applicant proposes to activate two new storage facilities, the Graham Lake Storage Field, Muhlenberg County, Kentucky, and the Hanson Storage Field, Hopkins County, Kentucky. Accordingly, Applicant requests authority to:

(a) Operate the Graham Lake Field as a gas storage field and in connection therewith, to construct and operate one 1,000 horsepower compressor station, one meter and control station, and approximately 400 feet of 10-inch pipeline which will connect the existing facilities of Applicant with that field, and

(b) Operate the Hanson Field as a gas storage field and in connection therewith, to construct and operate one meter and control station, approximately 8 miles of 20-inch pipeline which will connect the existing facilities of applicant with that field, and one 330 horsepower compressor station.

Further, Applicant seeks permission and approval to abandon and remove 400 feet of 4-inch pipeline and one purchase meter station presently located in the Graham Lake Field and one purchase meter station presently located in the Hanson Field. Said facilities are not adequate for storage operations.

Applicant proposes to deliver an additional 54,213 Mcf of contract demand to existing customers commencing with the 1964–65 winter heating season, and an additional 46,278 Mcf to existing customers commencing with the 1965–66 winter heating season. Of the total increased deliveries some 60,000 Mcf will be obtained through initial development of the Hanson and Graham Lake Storage Fields and through further development of the existing Leesville Storage Field.

The total cost of Applicant's project is estimated to be $17,792,500, which cost will be financed by the issuance of long-term debt securities.

On May 1, 1964, Mississippi Valley Gas Company filed herein a petition to intervene. The burden of such filing is that petitioner does not request formal hearing in this proceeding and does not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that petitioner desires to preserve its rights to appear and participate fully in the event that this matter should be set for formal hearing. Inasmuch as the shortened hearing procedure is being used herein, no further action on the intervention petition appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 21, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) The proposed facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by applicant in this proceeding are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned in this proceeding, as hereinbefore described, are subject to the jurisdiction of the Commission, and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) The maximum inventories of and withdrawals from the Leesville, Graham Lake and Hanson Storage Fields should be limited as hereinafter ordered.

(9) Applicant should file, for both the existing and the new storage projects hereinafter authorized, semi-annual reports similar to those presently required for its other authorized natural gas storage operations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as amended, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and all sales and delivery of natural gas authorized in paragraph (A) above shall have commenced, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 24 months from the date on this order issues.

(D) The inventory of the Leesville Storage Field shall be limited to a total of 3,700,000 Mcf and withdrawals therefrom shall not exceed 40,000 Mcf per day, without further Commission authorization.

(E) The inventory of the Graham Lake Storage Field shall be limited to a total of 4,200,000 Mcf, and withdrawals therefrom shall not exceed 15,000 Mcf per day, without further Commission authorization.

(F) The inventory of the Hanson Storage Field shall be limited to a total of 11,850,000 Mcf, and withdrawals therefrom shall not exceed 30,000 Mcf per day, without further Commission authorization.

(G) Applicant shall file, for both the existing and the new storage projects authorized herein, semi-annual reports similar to those presently required for its other authorized natural gas storage operations.

(H) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as amended, in this proceeding, be and the same are hereby granted.

(I) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

OPINION NO. 429

WESTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-329; U.S. NATURAL GAS CORPORATION, DOCKET NO. CI63-1460

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 26, 1964)*

Syllabus

1. Sufficient need for gas shown since, (1) price is favorable; (2) gas can be utilized to meet peak-day demands without significant investment in facilities; and (3) opening of Washakie Basin provides possible area of significant new gas supplies proximate to markets. P. 1299.
2. Absence of complete market and supply showing is not fatal to instant applications in light of minor volumes involved. P. 1299.
3. Western's certificate conditioned to provide that Colorado Interstate have unlimited make-up over the contract term on all volumes of gas paid for but not taken. P. 1299.
4. Where economics of project either will not or cannot have an effect on rates to be charged consumer, and no deprivation of service will be occasioned

---

* Initial decision appears on P. 1303.

by failure thereof, matter of financial feasibility ceases to be of decisional significance. PP. 1299, 1300.

5. Since it deals here with an economically borderline project, Commission conditions certificate precluding Western from applying for any rate increase [over and above contract price] based on inadequate return, P. 1300.
6. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act.

J. Evans Attwell for Western Transmission Corporation and U. S. Natural Gas Corporation.

Justin R. Wolf and *Charles A. Case, Jr.* for California Oil Company, Western Division.

Thomas G. Johnson for Shell Oil Company.

Martin L. Friedman, Michael J. Shea, Frank P. Saponaro, Jr., Robert C. McHugh, and *James L. White* for Colorado Interstate Gas Company.

Charles E. McGee, James D. McKinney, Jr., and *Angus A. Davidson* for Sinclair Oil & Gas Company.

William E. Hynan, Jr. and *John J. Mullally* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BLACK, *Commissioner:*

This proceeding involves two interrelated applications for certificates of public convenience and necessity pursuant to subsections 7(c) and (e) of the Natural Gas Act. It is before the Commission on exceptions to an initial decision issued February 6, 1964. U. S. Natural Gas Corporation, applicant in Docket No. CI63–1460, seeks authorization as an independent producer to sell gas to be produced from leases covering approximately 30,000 net acres in the Washakie Basin of Carbon County, Wyoming, to Western Transmission Corporation at an initial price of 15 cents per Mcf.[1] Western, applicant in Docket No. CP63–329, proposes in turn to construct facilities to deliver and sell the gas at an initial price of 20 cents per Mcf to Colorado Interstate Gas Company (CIG) at a point of delivery on CIG's main line in Sweetwater County, Wyoming. The only opposition to certification has come from staff, primarily on the ground that CIG has no established need for the gas to be supplied by Western. Staff counsel also raised questions as to the economic feasibility of Western's proposed project, contending that it is "too speculative" to warrant our approval.

The applications herein considered were consolidated originally with the producer applications in Transwestern Pipeline Company, *et al.*, Docket No. G–20464, *et al.* However, a motion by applicants for severance and early disposition was granted and hearings before the Presiding Examiner were concluded on October 22, 1963. At the hearing applicants presented evidence through witnesses and exhibits as to the negotiations underlying the subject contracts, the terms and conditions of the contracts, the estimated reserves and availability of gas from the leases dedicated under U. S. Natural's contract with Western, the financial condition of Western, both as presently organized and as it may reasonably be expected to develop on the basis of various sales volumes, and the design and estimated cost of the proposed facilities together with the estimated cost and delivery capacity of smaller sized facilities.

---

[1] All prices are at 14.65 psia.

Some evidence also was adduced regarding the prospects for the development of additional reserves throughout the Washakie Basin. CIG, which has the status of an intervener,[2] presented a witness who testified as to the advantages expected to be derived from the Western gas and its need therefor to replace existing reserves currently being depleted and to meet the normal growth of CIG's markets. Staff, through two witnesses, offered evidence to show that the proven gas reserves available under the U.S. Natural-Western contract were less than as estimated in applicant's study and that the Western project, on the basis of a traditional cost of service study, does not have a reasonable expectation of economic feasibility.

The factual background is reflected in the examiner's decision and need not be extensively restated here. In brief, U.S. Natural controls by leasehold approximately 30,000 net acres in the Washakie Basin in south-central Wyoming. The total production at present is from two wells spaced 410 feet apart, actually a twin well. Although CIG during preliminary negotiations indicated a willingness to purchase the gas at a delivered price of 20 cents per Mcf, U.S. Natural was financially unable to construct the facilities to connect the gas to CIG's line. It was to resolve this difficulty that Western was formed.[3] The proposed facilities of Western would consist of a 26-mile 12¾ inch O.D. pipeline connecting to a purchase meter station and tap on CIG's existing line and, at the other end, approximately 500 feet of 4½ inch O.D. gathering line to the wells on the acreage leased by U.S. Natural. Related measuring and dehydration facilities also would be constructed. Western's pipeline system would have a maximum design capacity of 77,500 Mcf per day and would be constructed at an estimated cost of $845,000. As the applications are presented, the 30,000 acres of U.S. Natural is the only acreage now dedicated to the Western project. Following certification, and providing additional gas reserves can be found, Western proposes to construct whatever purchase laterals and additional gathering facilities as may prove necessary to connect gas supplies in the remaining 1,320,000 acres in the Washakie Basin.

Western's contract with CIG is an "open-end" agreement in that it requires CIG to take-and/or-pay for the greater of 4,000 Mcf per day or 1,000 Mcf per day for each 8,000,000 Mcf of reserves covered by purchase contracts between Western and its suppliers. The precise take-and-pay and take-or-pay obligation of CIG is discussed more fully herein. No dispute has arisen regarding either the 20-cent per Mcf initial price to be charged CIG by Western or to the 15-cent per Mcf initial rate to be paid U.S. Natural. With Western's concurrence, the examiner included a condition which would in effect prohibit Western from applying for any rate increase, beyond the periodic escalation of one cent per Mcf each five years presently provided in the contract, based on inadequate return or other financial need. This condition will be retained as an essential element in the granting of a certificate to Western. Otherwise, price is not an issue in the proceeding.

As brought out in the initial decision, the primary issues are (1) whether CIG has a need and market for the gas intended to be supplied, and (2) whether Western's proposed project must be rejected as economically infeasible. The examiner has recommended that certificates be issued, ruling against staff's arguments opposing the applications. These issues are renewed in staff's exceptions, which are the only exceptions filed; applicants and CIG have submitted replies.

---

[2] In addition to the parties indicated, intervention was granted to California Oil Co., Western Div.; Sinclair Oil & Gas Co., Shell Oil Co. and Continental Oil Co. With the exception of Continental, all such interveners were represented in the hearing; however, they did not participate actively in the proceeding.

[3] Western was formed as a Delaware corporation on November 16, 1962. A public offering of stock in the amount of $1,162,537 awaits Commission certification and S.E.C. approval.

On consideration of the record we are of the opinion that the examiner was correct in his determination that certificates should be issued to U.S. Natural and Western. We differ, however, with his dismissal of the objections relative to the worsening of CIG's take-or-pay problem as a result of these certifications, at least to the extent that such problem may be aggravated by the possible forefeiture of prepayments required for gas not taken under the terms of the CIG-Western contract. A condition will therefore be included to insure that CIG will not be foreclosed from taking make-up volumes at any time during the term of the contract. Also, we believe a general caveat is appropriate regarding our action in issuing a certificate to Western.

CIG's Need—Taking figures from CIG's expansion application in Docket No. CP63-344, Phase I, staff maintains that CIG's markets are not able to utilize the pipeline's present minimum supply obligations; that by the end of 1964 CIG will have an accumulated deficiency of 116,109,000 Mcf in its minimum take obligations, including 41,136,000 Mcf added in the present year and which, to a great extent, will have to be paid for but not taken; that CIG has been forced to make short term sales over the past few years, totaling approximately 159,000,000 Mcf, to relieve its oversupply problems and minimize payments for gas not taken, including certain recent sales at 5.5 and 6 cents per Mcf less than the price it will be paying for Western's gas; and that, because of its accumulated deficiency in takes, CIG will not need Western's gas, on an annual basis, for about eleven years. Staff also contends that if CIG pays for but does not take Western's gas in the period until its system can be brought into balance it will be obligated to make prepayments totaling at least $3,000,000 based on the 20-cent initial price. For these reasons staff contends that CIG has not shown a sufficient need for this gas supply to justify the attachment of Western's reserves.

Applicants and CIG maintain that the gas here sought to be obtained would be used to replace reserves which are being depleted at the rate of 300 million Mcf annually and to meet normal growth requirements in the markets presently served by CIG. They point out that the volumes of gas here involved, which, in CIG's considered estimation, will approximate only 1,425,000 Mcf in the first year (4,000 Mcf average day and 6,000 Mcf peak day)[4] are minimal, constituting little more than 0.4 percent of CIG's annual requirements and less than one-quarter of its normal yearly growth requirement. Among the claimed advantages are contract provisions whereby CIG can call upon Western for up to 30,000 Mcf per day for a maximum of 30 days during each of the next two winter heating seasons to meet peak needs at the 20-cent per Mcf price. This gas could be utilized in lieu of "best efforts" gas offered by El Paso at 25.5 cents per Mcf which is delivered to CIG 116 miles further from market than the Western gas. In addition the Western gas can be used to replace gas presently purchased from El Paso at 27 cents per Mcf. Applicants further note that the CIG-Western contract limits escalations to one cent each five years for a 20-year term, thereby avoiding unforeseen price increases, and that the only expenditure necessary by CIG is $17,930 for the construction of a purchase meter station to enable the receipt of the gas into its system. They also point out that the Commission's certification will provide a market for gas presently shut-in in the Washakie Basin through lack of intermediate transportation facilities. Insofar as its recent short term sales are concerned, CIG points out that all such sales have been made from its southern division in Texas and Oklahoma and that it has had no surplus on its Rocky Mountain system, west of Denver; it contends that it is to its advantage to purchase minor additional supplies in Wyoming rather than to add compression facilities to move more southern gas westward to meet peak requirements. As to its take-or-pay problem CIG states that the quantity of gas here involved is too small to have any significant effect.

---

[4] Western's estimates of a daily minimum of 6,412 Mcf and a maximum of 9,618 are somewhat higher, thereby tending to show a better economic feasibility.

We agree with the examiner that the advantages cited by CIG including the favorable price, absence of any significant investment by CIG in new facilities to receive the gas and its ability to utilize the gas to meet peak-day demands, as well as the opening of the Washakie Basin as a possible area of significant new gas supplies proximate to CIG's markets, are adequate to establish a sufficient need for the gas by CIG. Although the existing imbalance in CIG's systemwide operations is a matter of concern, we do not believe that the absence of a complete market and supply showing is fatal to the applications in the circumstances presented particularly in light of the relatively minor volumes involved. Accordingly, we shall issue the certificate in this case, but without prejudice to a more complete evaluation of CIG's needs upon applications for the certification of sales involving substantial additional gas reserves.

Article 4.4 of the gas purchase agreement between CIG and Western[5] provides, in part, that all volumes paid for by CIG but not then taken may subsequently be taken by the purchaser without additional cost as any time during the term of the contract. This provision appears to accord CIG a life of the contract make-up provision on underages. In fact CIG's witness, who is manager of their Industrial Engineering Department and Assistant Secretary of the company, testified to this effect, citing it as one of the outstanding features of the contract. The staff's brief, however, indicates that a different interpretation may be applicable in that, as (and if) Western's reserves develop in excess of 80,000 MMcf, CIG will be under a "take *and* pay" obligation, without opportunity for the deferment of make-up volumes to succeeding years. Staff's interpretation of the contract provision was not excepted to in the reply brief of the applicants. The ability of CIG to take make-up volumes throughout the term of the contract, without regard to the amount of reserves determined under Article 4.1, is of prime importance in our decision to allow CIG's attachment of Western's reserves under the limited requirements study offered in this proceeding. Any limitation in this right would, we believe, constitute grounds for denial of the certificate requested by Western. Accordingly, the certificate granted to Western will be conditioned to provide for unlimited make-up by CIG on all volumes paid for but not taken over the contract term.

Economic Feasibility of Western's Project—In evaluating applications for certificates pursuant to Section 7 of the Natural Gas Act, the economic feasibility of the proposed project has traditionally been a factor; primarily because of the effect which the costs of construction, maintenance and operation of the proposed facilities will have on the rates to be charged the consumer. Conversely, where the economics of the project either will not or cannot have an effect on the rates to be charged the consumer, and no deprivation of service to the consumer will be occasioned by failure of the project, the matter of financial feasibility ceases to be of decisional significance. It is the welfare of the consumer which is our special concern and it is to his protection that our attention is primarily directed.[6] It must also be recognized that irrespective of what we may decide as to the reasonable prospects of a proposed project for the purpose of the findings required for a certificate of convenience and necessity, the fact of our issuance of a certificate is in no way a guarantee of the eventual financial success thereof as a business venture.[7] However, we cannot be blind to the weight which investors have assigned to the fact that the technical, geological and economic factors contributing to the financial success of the proposed project have been tested and favorably passed upon by a responsible federal agency. The validity of applicant's assumptions relative to these factors with respect to this project have been contested by our staff. Thus, it appears appropriate to point out that here we are dealing with a project of a borderline nature and which, from a business standpoint, is heavily dependent on the successful outcome of U.S. Natural's exploration for additional reserves and their development as a further source of supply to Western. In order to minimize the risk to the consumer Western has agreed to the inclusion of a condition in its certificate which will prevent it from seeking an increased rate of return should the return herein provided prove inadequate. This condition is embodied in the Presiding Examiner's order and was given great if not controlling weight in his decision recommending the application's approval.[8] It is similarly persuasive to us for, as Western points out, the consumers are thereby adequately protected should any of these factors fail to develop as Western anticipates. We shall therefore, adopt this condition as our own and dispense with much of the usual concern regarding the financial feasibility of the project.

---

[5] As modified by Amendment No. 2 dated August 19, 1963.

A summary of the various claims and counterclaims will serve to illustrate the area of disagreement between staff and the applicants. Staff contends that a certificate should not be issued for the reason that, as computed on a cost-of-service basis, Western will experience a net revenue deficiency in each of the first three years of its operations. Much of this line of argument is based upon a study indicating that the gas reserves underlying the leases dedicated by U.S. Natural are substantially lower than as claimed by applicants and which, under the 1:8000 ratio in the minimum purchase obligation, will determine to a large extent the initial financial success or failure of the Western venture. Staff also contends that a 12¾ inch pipeline extending to within 500 feet of U.S. Natural's wells in order to receive 4,000 Mcf to, at maximum, 8,200 Mcf[9] on an average day and utilizing between 6 and 9 percent of line capacity is completely overdesigned. Applicants on their part concede that at the 4,000 Mcf per day minimum contract quantity Western will have a net operating loss of approximately $20,000 in each of the first three years but contend that they will have a "positive cash flow" adequate to sustain operations while the exploration for additional reserves goes on.

[7] *Cf., Transcontinental Gas Pipe Line Corp.*, Opinion No. 371, 28 FPC 979, 982–983.

[8] The record shows that the condition was proposed by applicants in a supplement to Western's application and was included in the certificate at their suggestion.

[9] The estimate of 8,200 Mcf per day is based on applicants' estimate of total, proven reserves. Staff believes that actual deliveries will be closer to the 4,000 Mcf per day figure. These volumes are at a pressure base of 14.73 psia.

They further contend that the break-even point will be reached with deliveries of 5,150 Mcf per day, and based on their own estimated deliveries of 8,200 Mcf per day, that they will earn a return of 3.34 percent by the third year.

The condition applied by the examiner provides that Western's rate for its sales to CIG "shall not at any time exceed the sum of 5 cents per Mcf plus any rate lawfully in effect for the sale of gas to Western Transmission Corporation by U.S. Natural Gas Corporation." This condition is patterned after a similar condition in the certificate issued in Opinion No. 397[10] to Medina Gathering Corporation which, though operating in a completely different geographical area, performs a function analogous in all material respects to that proposed by Western. In that case Medina was limited to a 7-cent per Mcf spread between its purchase and selling prices. In accepting a lesser standard of economic feasibility than would otherwise have been required, we stated, "As long as it is guaranteed that Medina will not, in turn, shift these risks to the consumer by filing increased rates based upon a claimed inadequate rate of return, we think it is appropriate that our scrutiny of the economic feasibility of this project be closer to the kind of examination we would give a producer's proposed sale and related construction of jurisdictional facilities." The "risk" to Medina was that the production would be inadequate to support the transmission system proposed, the same risk which Western is willing to assume in this case.

As previously made clear, consideration of economic feasibility is required in the usual case because of the effect on the rates which will be charged to the consumer. With the inclusion of the condition in the certificate, however, any risk of uneconomical operation or inability of Western to earn a reasonable return on its investment or to attract capital will lie wholly with Western and its stockholders and will not be able to be shifted to the consumer. Western's price will at all times be no more than 5 cents per Mcf over the cost of gas purchased from U.S. Natural. If the amount thereby represented is sufficient to produce an adequate rate of return, Western will survive and prosper and the consumer will receive the benefit of whatever gas is delivered at a seemingly favorable price. If, on the other hand, the return should prove inadequate, Western will have no opportunity to seek increased rates, beyond the rates presently provided in the contract with CIG. In such circumstance the possible deprivation to the consumer of the relatively minor volumes of gas herein involved will be of only limited significance. This is the chance Western has indicated it is willing to accept, a change made necessary by its inability to prove complete financial feasibility at this time. As so conditioned, it is our opinion that the certificate may be issued.

The Commission finds:

(1) U.S. Natural Gas Corporation, an independent producer of natural gas, is now, or upon initiation of the sales proposed in its application will be, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission and is, or will be, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Upon initiation of its proposed service and sale, the Western Transmission Corporation will be a "natural-gas company" within the meaning of the Natural Gas Act; will be subject to the jurisdiction of the Commission; and will be a pipeline company for the purposes of the Commission's Regulations under the Natural Gas Act.

---

[10] *Medina Gathering Corp., et al.*, Docket No. CP62-194, *et al.* 30 FPC 227, issued July 16, 1963.

(3) The sales of natural gas proposed by U.S. Natural and Western, as hereinabove referred to and as more fully described in their applications, are subject to the jurisdiction of the Commission and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Subject to the requirements of our order herein and the conditions attached to the certificates herein issued, U.S. Natural and Western are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The sales proposed by U.S. Natural and Western, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity upon the conditions hereinafter set forth, and certificates should be issued to each as hereinafter ordered.

(6) The conditions attached to the certificates hereinafter issued are required by the public convenience and necessity.

(7) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to U.S. Natural and Western, upon the conditions hereinafter set forth, for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in the applications and amendments thereto.

(B) The certificate issued to U.S. Natural Gas Corporation, the producer applicant, is hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 15 cents per Mcf at 14.65 psia, from the date of the issuance of this order and until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificate herein issued to U.S. Natural is conditioned upon its being accepted in writing by the applicant within 30 days of the issuance of this order.

(D) The certificates issued herein are conditioned upon the acceptance by the applicants of amendments to their contract eliminating the discrepancies between the quantity take clauses in such contract and those in the Western Transmission Corporation-Colorado Interstate Gas Company contract and conforming such clauses in the former contract to those contained in the latter contract.

(E) The certificate issued to Western is conditioned to provide that Colorado Interstate Gas Company shall be free to take make-up volumes of gas previously paid for but not taken without further cost at any time over the life of the contract.

(F) The certificate issued to Western Transmission Corporation is further conditioned to require that its rate for sales to Colorado Interstate Gas Corporation shall not at any time exceed the sum of 5 cents per Mcf plus any rate lawfully in effect for the sale of gas to Western Transmission Corporation by U.S. Natural Gas Corporation.

(G) The general terms and conditions set forth in Section 157.20 of the Commission's Regulations Under the Natural Gas Act shall attach to the certificate issued herein to Western Transmission Corporation, and the facilities hereby authorized shall be constructed and placed in actual operation, as provided by subparagraph (b) of Section 157.20 of the Commission's Regulations, within four months from the date on which the Commission's order issues.

(H) Western Transmission Corporation shall within 90 days after the first two years of operation file detailed data setting forth its costs upon the basis of actual experience.

(I) Western Transmission Corporation shall file a tariff in accordance with Sections 154.31–41 of the Commission's Regulations Under the Natural Gas Act which shall show as the rate in effect the full compensation to be received by Western Transmission Corporation per Mcf of gas sold as provided for by the contract with Colorado Interstate Gas Company and the conditions herein imposed.

(J) The certificates issued herein are not transferrable and shall be effective only so long as each of the said applicants continues the acts and operations as herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(K) The grant of certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose or prejudice any further proceedings or objections relating to the operation of any price or related provisions in the gas contracts here involved.

(L) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

(M) The examiner's decision, to the extent not inconsistent herewith, is adopted as part of this Opinion and Order.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 6, 1964)

KANE, *Presiding Examiner:* This consolidated proceeding involves applications seeking authorization and approval from the Federal Power Commission, pursuant to Sections 7(c) and 7(e) of the Natural Gas Act, of an integrated transaction involving the sale and transportation of natural gas in interstate commerce by and among the producer, U. S. Natural Gas Corporation (U. S. Natural), Western Transmission Corporation (Western), a proposed intermediate pipeline and Colorado Interstate Gas Company (CIG), the main pipeline. The certificate applications of U. S. Natural and Western were filed with the Commission on May 30, 1963. Various supplements were filed thereafter to reflect amendments and changes allegedly resulting from conferences with the Commission Staff.

By Secretary's Notice dated July 30, 1963, the applications herein were consolidated for hearing with the producer applications in Transwestern Pipeline Company, *et al.*, Docket No. G–20464, *et al.* By Order and Notice of the Secretary issued September 9, 1963, the Commission granted the application of U. S. Natural and Western for severance from the consolidated hearing, previously ordered, and directed that the matters involved in and the issues presented by the instant applications be heard together at a hearing to begin on October 8, 1963. By orders issued October 7 and 15, 1963, the Commission granted the petitions to intervene of CIG, California Oil Company, Western Division (California), Sinclair Oil & Gas Company (Sinclair), Shell Oil Company (Shell) and Continental Oil Company (Continental). The hearing, commenced on October 8, was concluded on October 22 at which time the applicants moved that the Commission waive and omit the intermediate decision procedure pursuant to Section 1.30(c)(3) of the Commission's Rules of Practice and Procedure. By order issued November 7, 1963, the Commission denied the said motion. Briefing was completed and the case fully submitted on December 4, 1963.

At the opening of the hearing, Staff counsel moved to dismiss the applications basing such motion on the failure of CIG to make a full disclosure of its market and supply requirements and its need for the additional reserves sought to be obtained from approval of the instant applications. Decision on the motion to dismiss was reserved to be disposed of in the initial decision.

U.S. Natural is a comparatively small independent producer having approximately 2,000 stockholders. Its stock is traded on the American Exchange. Approximately 30 percent of the outstanding stock, constituting the biggest block, is owned by close relatives of one family (Frankel), the remaining 70 percent is scattered among the approximately 2,000 other stockholders. It controls approximately 30,000 acres of oil and gas leases in the Washakie Basin, Carbon County, Wyoming. In connection with the sale of the gas, proposed herein, U.S. Natural determined that its financial situation was such as to preclude its construction of the 26 miles of pipeline and related gathering and measuring facilities required to connect the gas to CIG's main line in Sweetwater County, Wyoming, a condition of the proposed sale. To resolve the difficulty, Western was formed as a Delaware corporation on November 16, 1962, to perform the necessary transportation function. Harding Frankel, brother of the President of U.S. Natural and owner of approximately 5-6 percent of the stock of that company, resigned as a Director of that corporation in November of 1962 to organize the new company. At the time of the hearing he apparently owned all the then issued stock of Western. A public offering of the unissued stock of Western awaits Federal Power Commission authorization for the proposed project and approval from the Securities Exchange Commission. In connection with the proposed issuance of the public stock in the form of a rights subscription in favor of U.S. Natural's stockholders, the Frankel family, allegedly at Staff's request, has agreed to limit its exercise of its subscription rights to less than 10 percent of Western's stock. Furthermore, U.S. Natural will not buy or subscribe to any of Western's stock.

The producer, U.S. Natural, under a gas purchase contract dated February 1, 1963, proposes to sell gas to Western from approximately 30,000 net acres in the Washakie Basin area, Carbon County, Wyoming, at 15 cents per Mcf at 14.65 psia for transportation and delivery by Western to CIG at its existing main line in Sweetwater County, Wyoming, at a price of 20 cents per Mcf plus the right by Western to file for fixed periodic escalations of one cent per Mcf every five years. In order to transport and deliver the gas purchased from U.S. Natural, Western proposes to construct and operate natural gas system facilities consisting of a 12¾ inch O.D. main pipeline and related gathering, dehydration and measuring facilities. The proposed main pipeline would extend approximately 26 miles northward from the Cow Creek Field in Carbon County, Wyoming, connecting to CIG's existing interstate pipeline in Sweetwater County, Wyoming. The pipeline system would have a designed maximum capacity of 77,500 Mcf per day and would be constructed at an estimated total cost of $845,000. Financing of the project is to be obtained solely from the sale of common stock.

Western proposes to deliver to CIG the greater of 4,000 Mcf per day or 1,000 Mcf per day for each 8,000 Mcf of reserves covered by contracts between Western and certain producers and contained within an area comprising 1,350,000 acres in the Washakie Basin in parts of Sweetwater and Carbon Counties, Wyoming, and Moffatt and Routt Counties, Colorado. Western, during the next two years, also proposes to construct certain well or field lines and field compressors at an estimated cost of $225,000 to connect with additional supplies of natural gas within this area.

U. S. Natural Gas Corporation in this proceeding seeks Commission authorization to sell to Western, gas produced from leases covering approximately 30,000 net acres of partially developed reserves in the Washakie Basin, Carbon County, Wyoming, at an initial price of 15 cents per Mcf. The acreage dedicated by U. S. Natural is contained within the 1,350,000 acre area from which Western proposes to purchase and deliver gas to CIG.

The only opposition or objection to the granting of the certificates in these proceedings emanated from the Staff. The main issues raised by the Staff and deemed involved in these proceedings may be summarized as follows:

Whether the estimated reserves and availability of the gas are sufficient to fulfill the contracts.

Whether Western's proposed project can meet the economic feasibility test.

Whether CIG has established the immediate need and market for the gas to be supplied.

Staff, in opposing the granting of the certificates sought in the instant proceeding, based its principal objections, as stated in the conclusion of its brief, on the grounds that: "since CIG has not shown a sufficient need to justify the attachment of Western's reserves and due to the speculative nature of the over-designed project Staff recommends denial of certification."

It is the applicants', as well as CIG's position, that a complete market and supply showing is not necessary or called for in this proceeding; that the favorable price; favorable location of the source of supply; the need to replenish diminishing reserves; and the many short term and long term operating advantages to CIG and to its customers resulting from attaching the volumes of gas here involved fully justify certification of the project without the type of showing called for by the Staff; and that CIG has a present and immediate need for the gas and is relying upon using it to enable it to meet its peak day requirements during the next three years heating seasons.

The interveners, California, Sinclair, Shell and Continental neither opposed nor supported approval of the applications sought herein. Their only concern was that no decision or finding in this case be made to apply to or prejudice their pending applications to sell gas to CIG from the Wind River Basin, which applications have already been consolidated for hearing in another proceeding.

The evidence establishes the fact, and it is not questioned by Staff counsel, that U. S. Natural and Western are qualified applicants within the meaning of Section 7(e) of the Act and are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the

Act and the requirements, rules, and regulations of the Commission thereunder. A prime facie showing, at least, has been made as to the adequacy of the reserves for the purpose of the sale herein proposed as well as the ability of Western to finance its proposed project. Questions have been raised in connection with the engineering feasibility of the project, especially in connection with its overdesign.

It certainly cannot be said that the applications in the instant proceeding on their face or on presentation of evidence signal the existence of a situation that probably would not be in the public interest and that therefore a permanent certificate should not be issued. (The criterion indicated in the *CATCO* decision.)

In view of the Staff's position to the effect that the most important aspect which permeates the requirement for the satisfaction of the present or future public convenience and necessity is whether the proposed sales volumes are needed by the consuming public, in this instance the customers of CIG, this aspect of the case must now be resolved.

The evidence adduced in support of the applications indicates that the gas sought to be obtained by CIG as a result of these proceedings would be used as an additional source to replace existing reserves and to meet the normal growth of CIG's markets. CIG's reserves are being depleted at the rate of approximately 300,000,000 Mcf annually. This means that over the 20-year life of the Western contract, CIG must add six trillion cubic feet of gas in order to replace, in part, those existing reserves at the contemplated rate of depletion. CIG's witness, Diefenbach, also testified that it was estimated that the Western gas at 4,000 Mcf per day would constitute only 22 percent of the normal annual increase in CIG's market for a single year.

While it was admitted that CIG had not experienced any difficulty in meeting its average daily requirements from presently attached sources, and that it could meet such requirements for a number of years in the foreseeable future, yet it was required to prepare itself to meet its growth every year.

It seems reasonable to conclude that CIG should continue to add to its reserves to the extent, certainly, of approximating the amount of reserves used up in the same period. Otherwise, the company will be moving toward liquidation and will be permitting the wasting away of its ability to serve its customers. See *Middle States Petroleum Corporation*, 21 FPC 493, 495. Furthermore, it is fair to assume that CIG can anticipate a certain amount of normal growth on its system due to population increase and new service, especially in view of the fact that its main transmission system in the Rocky Mountain area is growing at the average rate of about 6.7 million Mcf per year, requiring connection of 1.1 trillion cubic feet of new reserves.

The Staff, however, admitting that it was not suggesting "that a balanced system be required to present the complete market and supply showing each time it seeks authorization to attach an incremental supply" yet in the instant proceedings, insists that there was no other recourse which would afford the basis for a realistic determination of CIG's need.

The Staff cites no precedent to support its position that a complete market and supply showing will be required when a major pipeline company seeks to attach relatively minor additional supplies to its system on terms and conditions deemed to be favorable to its customers. The Commission not only has not established such a rigid and unvarying rule but apparently has held to the contrary. In *Medina Gathering Corporation, et al.*, Docket No. CP62-194, *et al.*, Initial Decision, May 3, 1963, p. 248 adopted, with modifications not material herein, by Commission Opinion 397, July 16, 1963, 30 FPC

227, 236, the interveners also opposed the granting of a certificate on the ground that Tennessee, the pipeline, had not demonstrated at "length and with particularity that it needs this reputed supply." The Examiner specifically rejected any such requirement as a basis for granting a certificate. No exception to this portion of his decision was filed and it is deemed adopted by the Commission in its Opinion No. 397. It must be kept in mind that CIG, as the pipeline in the *Medina case, supra,* is not proposing any increase in capacity for the acceptance of the Western gas but merely the installation of a metering system at a very nominal cost. CIG in presenting a definitive showing as to its need for the Western gas on a peak day basis and its ability to absorb the relatively minor volumes on an annual basis has, it appears, complied with the criteria established in the *Medina* case, *supra.* The Staff unsuccessfully attempts to distinguish the *Medina* case but no significant distinction can be bottomed on the differences suggested.

The Staff also attempts, however, to support its position by reference to two recent orders of the Commission. The order of September 9, 1963, granted severance of the instant two dockets from the consolidated hearing in G-20464, *et al.*, despite the opposition of Staff based, among other things, on the ground that "the attachment of any additional reserves by CIG is so clearly tied in with the proposed sales in Phase Two and the possible oversupply problem that the matters must be heard upon a consolidated record." The said order stated "In view of the fact that any requirement of CIG for additional reserves can be determined in a separate formal hearing on the applications in Docket Nos. CP63-329 and CI63-1460, severance should be granted." Certainly the plain language of this order referring to the instant proceedings cannot be deemed to support the Staff's position. The order of the Commission of October 24, 1963, issued in G-20464, *et al.*, after the instant dockets were severed and after the hearing herein had been concluded cannot be considered as revoking or affecting the tenor or scope of the Commission's previous order.

CIG proposes to utilize the so-called emergency Western gas up to 30,000 Mcf per day during each winter heating season until 1966, in lieu of "best efforts" gas offered by El Paso at 25.5 cents per Mcf. The El Paso gas is delivered to CIG at Green River, Wyoming, which is 116 miles farther from the market sought to be supplied by the Western gas. The emergency gas from Western, furthermore, would supplement the volume of gas available from El Paso and would reinforce CIG's over-all capability of meeting peak day requirements of its Rocky Mountain customers utilizing its present peak day transmission system capacity. The Western gas is pipeline quality gas and would be delivered directly into Colorado Interstate's Wyoming line at pipeline pressure at a cost of 20 cents per Mcf. This price compares favorably with that of other suppliers. Other advantages claimed by CIG for the Western gas include the avoidance of unforeseen price increases for twenty years. Except for the agreed maximum increase of one cent for each five years, plus tax reimbursements, Western does not have the right to file for any rate increase above such limits. In contrast, the El Paso gas which CIG receives is not protected by contract from rate increase possibilities. Furthermore, the Western gas is well located with reference to CIG's Wyoming line. Initial production will occur only 26 miles from CIG's Wyoming line where CIG can connect the gas merely by constructing a meter station at an estimated cost of $17,930. The attachment of such gas would thus permit greater utilization of existing facilities which in turn would reduce the cost of moving each Mcf of gas through the Wyoming line to market. In addition, Western gas would enable CIG to absorb new gas into its over-all system and to move that gas to market without the need for construction of new pipeline or compressor station facilities.

While it was admitted by CIG's witness that the 6,000 Mcf/d of gas from Western could be replaced by a like amount of gas from other points on CIG's system, it was determined, from an operating and design standpoint that it would be to CIG's customers' benefit to take the gas from Western. This conclusion apparently is shared by others most directly affected by the proposal and in a position to judge where there interests lie, namely, CIG's customers. To date no CIG customer has either intervened in the proceeding to voice any objection to the proposal or has filed any protest thereto. When considered against the backdrop of the relatively minor magnitude of the project and the criteria adopted in ***Medina***, it would appear that CIG's need data is sufficient to support a finding that there is a need for this gas by CIG at least for the period and to the extent of the amount involved in the contract.

The Staff, in connection with the question of CIG's need for the gas involved in these proceedings and the necessity for complete market and supply showing to justify the need for the gas sought therein, vigorously maintained that CIG is confronted with a serious over supply situation and take-or-pay problem which militates against approval of the instant applications. Taking figures from CIG's estimates submitted in another proceeding, the Staff concludes that CIG will be unable to absorb approximately 41,136,000 Mcf of its minimum supply obligations which to a great extent, the Staff maintains, will probably have to be paid for though not taken.

Because of the many ramifications of take-or-pay for obligations, periods of make-up, etc., and the absence of any probative testimony, establishing either the extent of any such take-or-pay for situation or explaining and exploring the possibilities and possible effect of the amounts involved in the instant applications, it must be concluded that the record in these proceedings affords no basis for the denial of the project or any part thereof based upon CIG's alleged unfavorable take-or-pay position.

It was brought out by Staff, however, that there are material differences in the take-or-pay provisions in the contracts between Western and U.S. Natural on the one hand and Western and CIG on the other resulting in Western's having a greater take-or-pay obligation from U.S. Natural than CIG had with respect to Western. The applicants have stated in their reply brief that they have no objection to a condition in any certificate issued which would correct the discrepancy and which would conform the quantity clause in their contract to that contained in the Western-CIG contract. Accordingly, such condition will be included in and made a part of the certificate to be granted herein.

The reserve studies introduced by the applicants and the Staff to determine reserve estimates were apparently in basic agreement with respect to the values of the various factors used in calculating gas reserves by the volumetric method. The only material difference relates to the proven gas reservoir volume (that is, the net effective gas sand thickness and the extent of the proven acreage to which it should be assigned). The sand thickness factor varied from the 30 feet estimated by the Staff witness in the Deep Creek formation to 61.7 feet estimated by applicants' witness. Staff admits that the difference is based principally upon a matter of professional judgment, particularly in this case where the information available was deemed not to be sufficiently reliable and was somewhat limited. Certainly, the very nature of the calculation and estimation involved as well as the subject matter thereof defies not only the use of exact computations but even any agreement among equally qualified experts. Accordingly, the Examiner in this case does not propose to determine the relative capabilities of the expert witnesses in this proceeding and rejects the applicants' conclusion that in this case the applicants' witness' professional judgment must prevail because of his alleged greater experience and greater knowledge of the particular area involved. There was little to choose from between the two presentations. However, since cross-examination of the applicants' witness revealed nothing to impugn the figures which were adopted as the basis for his conclusions and since Staff's witness' estimation of the average net pay gas sand thickness was based on a somewhat arbitrary judgment factor, the applicants' determination of the net reservoir volume available, based as it was upon generally accepted factors, will be generally accepted for the purposes of this proceeding.

The reserve study presented by Western indicates the following estimated gas reserves in the Cow Creek Field underlying leases dedicated by U.S. Natural: Proved, developed open to production 51,300,000 Mcf; proved undeveloped 15,500,000 Mcf; proved total 66,800,000 Mcf; probable 22,500,000 Mcf; grand total 89,300,000 Mcf. (The volumes of gas are expressed at a pressure base of 14.73 psia). Based upon the proved developed reserves of 51,300,000 Mcf, applicant's witness estimated that the minimum daily contract volume of 6,412½ Mcf could be supplied until the end of 1982 without further drilling; and on the basis of the estimated proved developed reserves the maximum contractual daily requirement of 9618.75 Mcf (150 percent of the minimum as per contract) could be produced until 1980. While these estimates are undoubtedly colored by unduly optimistic forecasts, there seems to be no reason to doubt that the minimum daily quantities required can be produced as indicated. In addition, applicants' evidence supports the conclusion that Western can supply CIG with the 30,000 Mcf of emergency gas daily for 30 consecutive days during the next three winter heating seasons in accordance with its contractual obligations. Even under the Staff's deliverability study and reserve estimates it appears that the peak day volumes of 30,000 Mcf could be delivered.

While no question was raised during the hearing with respect to the engineering adequacy of Western's proposed facilities or the reasonableness of their estimated cost, the Staff correctly pointed out that there could be no question but that the proposed 12-inch pipeline to be constructed at an estimated cost of $845,000 is over-designed for the transportation of the volumes contemplated under Western's contract with CIG. The estimated capacity of the 26-mile 12-inch main line is 77,500 Mcf per day; the 6,412 Mcf maximum average daily volume which Western contemplates delivering amounts at best to a capacity factor of less than 9 percent and if the minimum quantity of 4,000 Mcf is taken the capacity factor would be reduced to less than 6 percent. The waste of capacity and the additional cost attendant thereupon is evident. However, Western has an obligation to supply CIG with up to 30,000 Mcf of gas per day for periods not to exceed thirty consecutive days each during the next three winter heating seasons and applicants have introduced evidence to the effect that a 10-inch pipeline would be necessary to carry that quantity of gas. The difference in cost between a 10-inch line and a 12-inch line is estimated to be $133,000. The applicants seek to justify the additional expenditure on the ground that the area is potentially a prolific gas producer and that a smaller pipeline facility would prove to be uneconomical and that from the standpoint of economic feasibility the larger pipeline is recommended. This justification appears to be based upon pure speculation, since there is little or no testimony in this record from which it could reasonably be concluded at this time that an increase in reserves of the magnitude required could be obtained. As stated by Staff the extent of any additional reserves in commercial quantities that might be discovered in the area and whether Western will be able to contract for them are dependent upon an indeterminable combination of conjectural expectations and are, therefore, purely speculative.

However, as will hereinafter appear, since any increased costs of service resulting from the proposed pipeline's low operating capacity will not be passed on in the form of an increase in the cost of the gas to the ultimate consumer, no reason appears at this time to question either the applicants' judgment or its high and optimistic expectations.

The Staff also opposes certification of the Western project on the further ground that it is "too speculative and cannot show a probable feasibility." It is quite clear, the Staff concludes, "that the project is not economically feasible."

It must be borne in mind that consideration of economic feasibility as a necessary concomitant of public convenience and necessity is required because of its material effect upon the rates which will eventually be charged to the consumer. This conclusion is inherent in the decision in the case of *Medina Gathering Corporation, et al.*, Commission Opinion No. 397, July 16, 1963, wherein the Commission said, at p. 234 "As long as it is guaranteed that Medina will not, in turn, shift these risks to the consumer by filing increased rates which are based upon a claimed inadequate return, we think it is appropriate that our scrutiny of economic feasibility of this project be closer to the kind of examination we would give a producer's proposed sale and related construction of jurisdictional facilities."

In accordance with the proviso contained in the *Medina* case, *supra*, it is not this Examiner's intention either to pass over the question of feasibility in this case or to accept the applicants' dismissal of the question from consideration as being moot. However, following the path indicated by the *Medina* decision, it follows in the instant case that the feasibility of Western's project should not be judged by the same standards that would apply, for example, to the proposed expansion of a major long line transmission system. While it certainly appears to be speculative as far as the consumer is concerned for he will have adequate price protection.

In order to insure that protection, Western has indicated its willingness to accept a condition, similar to the one imposed in *Medina*, to provide CIG and its customers with ironclad protection against the filing for any increased rates based upon a claimed inadequate rate of return. The risk, if any, in final analysis, thus devolves upon Western and its stockholders.

It would be very difficult, indeed, under these circumstances, to be seriously concerned lest the rate of return to Western be inadequate to attract capital or cause present investors any financial pain. *Cf. Northern Natural Gas Company, et al.*, 25 FPC 1246, 1274, Examiner's decision adopted by Commission, 25 FPC 1234.

This is a risk which Western and its stockholders are willing to undertake. Since there is no risk to the consumer, and he will apparently receive benefits including a lower cost for the gas delivered to CIG, the determination of the question of economic feasibility should follow the lines of *Medina*.

It may be true that because of the open-end arrangement between Western and CIG, and the uncertainty of the amount of gas to be made available to

CIG, under such arrangement, no definite conclusion can be reached with respect to feasibility upon the basis of the showing made, because in essence the determination of such feasibility depends in large measure upon the quantity of the annual sales made.

The same uncertainty, however, appeared in the *Medina* case where the question of feasibility of the proposed system was dependent in large measure upon the results of subsequent drilling. The concern of the Commission, however, rightfully was directed toward the protection of the consumer against having to pay higher rates in the event that the fields were not as productive as anticipated.

The applicants' testimony concedes, and the financial exhibits establish, that based upon the minimum contract quantity of 4,000 Mcf per day Western will have a net operating loss during each of the first three years of operation notwithstanding a positive cash flow in such years, and that the break even point would be reached with annual deliveries of 5,150 Mcf per day. The financial exhibit, based on the concededly optimistic expectation of total developed and undeveloped proven reserves of 66,800,000 Mcf, after further drilling, and delivery of 8,200 Mcf per day, indicates that Western will earn a net return of 3.34 percent in the third year, or 2.12 percent if the investment credit is used to reduce income tax liability. Based upon the latter completely optimistic expectations, it cannot be said that the project is irrevocably economically infeasible. In this connection, it is interesting to note that calculations of net return based on a 6-inch pipeline indicates that based on deliveries of 4,000 Mcf per day, Western would earn 1.28 percent in the third year of operations and 7.14 percent based on deliveries of 8,200 Mcf per day. These estimated rates of return lose their significance when considered in light of the risk factors referred to above.

Western's rates are limited by contract to 20 cents per Mcf plus the right to file for escalations of one cent every five years. Such rates include the 15 cent ceiling price for the area to be paid to the producer U.S. Natural, and the five cent spread for Western for delivery of the gas to CIG. No other provision is made for increase in rates. In the event the venture turns out to be unprofitable the gas-consuming public cannot be called upon to make it profitable. The contract price would control under the circumstances. *United Gas Pipe Line Co.* v. *Mobile Gas Service Corporation*, 350 U.S. 332.

As in *Medina* the risk of economic feasibility rests solely upon Western and its investors and cannot be shifted to the gas-consuming public. Whatever gas enters CIG's line will be at 20 cents plus a possible one cent escalation at five-year intervals. This price is considerably lower and more attractive than CIG's gas price for comparable gas at that point. Western's willingness to have a rate condition attached to its certificate insuring limitation of the five-cent spread over the lawful rate in effect for the sale of the gas to it from U.S. Natural (and such condition will be included in its certificate) results in a somewhat more lenient appraisal of the economic feasibility of the project. Under that kind of appraisal it appears that the effect upon the public convenience and necessity of granting the certificate is considerably minimized even though not entirely removed. *Cf. Medina*, etc.

The burden of justifying the price of the gas which is the subject of the contracts involved in this hearing rests with the applicants. Furthermore, the parties' reliance on the Commission's policy statement price level is not in itself sufficient to justify an initial price at that level. It is only so where there is no record evidence that there has been any preponderance of comparable sales in this area certified at any lower price. *Skelly Oil Company, et al.*, 28 FPC 401, *Union Texas Petroleum, et al.*, 29 FPC 273, 275. There is no evidence in the record of this hearing relating to initial rates for jurisdictional sales currently being made in the area involved, or bearing on the issue of the "in line" price of the gas. In the absence of any evidence to the contrary, or opposition or protest, except as hereinafter referred to in connection with Staff's position re arm's-length bargaining, the guideline price of 15 cents per Mcf at 14.65 psia established by the Commission in its policy statement 61-1, 24 FPC 818, which is the contract price in these proceedings, will be accepted as the "in line" price.

Based upon the cost of service studies presented, including the Staff's, there can be no question but that the 5 cent spread between the purchase price of the gas and the delivery price to CIG is a reasonable one. The applicant has established that there is a market for the gas at the proposed price and, for the purposes of this case in any event, that economic feasibility will not affect the public convenience and necessity. It has made out a prima facie case at the price contracted for, and in the absence of any evidence rebutting its presentation, a certificate should be issued to it. *Hope Natural Gas Company*, 19 FPC 405, 407, *Middle States Petroleum Corporation*, 21 FPC 493, 499.

The staff inferentially attacks the rates fixed in the contracts on the basis of an alleged absence of arm's-length dealings between Western and U.S. Natural. No evidence, however, was introduced to indicate that the 20 cents per Mcf rate to be paid by CIG was higher than that which could have been obtained had there been no affiliation between Western and U.S. Natural. Certainly there was an arm's-length negotiation for the ultimate rate as between the applicants and CIG based on the competitive position of both parties.

Applicants' witnesses testified that due to the inability of U.S. Natural to finance the building of the pipeline, formation and organization of Western was required. Testimony was also adduced on the issue relating to the in fact affiliation between U.S. Natural and Western allegedly precluding arm's-length negotiations. However, resolution of this issue is not required in the instant case since even if Western were a controlled affiliate of U.S. Natural, its certification to construct and operate the pipeline in question would not be precluded in the absence of any evidence indicating that such affiliation resulted in a price increase or other detriment to the ultimate consumer for whose protection the Natural Gas Act was enacted. *Oil Inc., et al.*, 25 FPC 1178, adopting in most part Examiner's decision 25 FPC 1180. Staff's concern that future stockholders might be in a position to render the contract between U.S. Natural and Western void because of the absence of arm's-length bargaining between companies appears to be ill founded. There certainly is no evidence or other indication of any fraud on the stockholders of either company, and no evidence of violation of any fiduciary obligation or unjust enrichment by any of the participating officers of either company, sine qua non for any such action. Certainly in previous cases, even where a conceded affiliate of the producer was to be the transporting company and was specifically created for that purpose, no problem was foreseen with respect to absence of arm's-length dealing or voidability of any contract for the transportation of the gas. See *Oil Inc., supra.*

The decision in the *Oil Inc., et al.* case, *supra*, is peculiarly applicable to the instant proceedings because of the many similarities involved. In that case the stock of the proposed transporting company was owned by the same persons and in exactly the same percentages as that of the stock of the parent and producing company. As in the instant case, the inability of the producers to make deliveries in the field impelled the building of a small pipeline, 16 miles in the *Oil Inc.* case and 26 miles in the instant one. The difference between the price which the transporting company proposed to pay for the gas and the price it proposed to sell and deliver the gas to the major pipeline was $.055 in the *Oil Inc.* case and $.05 in the instant case. The contract involving the transporting company in the *Oil Inc.* case was an open-end one, as in the instant case, providing that it would sell and deliver natural gas up to a maximum daily volume of 12,000 Mcf or 0.0183 percent of the economically recoverable reserves whichever was greater. (The amounts, of course, differ from those involved in the instant case.) In that case, as in the instant one, the testimony of record did not support a reasonable conclusion that an increase in reserves of sufficient magnitude would be obtained to affect substantially the daily contractual volume.

A prima facie showing at least has been made as to (1) the adequacy of the reserves for the purposes of the sale herein proposed; (2) the ability of the applicant to finance the project; (3) the economic and engineering feasibility of the project; (4) the eventual as well as present need in CIG's market for the gas proposed to be furnished; (5) "in line" rates to be charged.

The factors referred to did not result in the rejection of the certificate applications in either the *Oil Inc.* or *Medina* cases and neither do similar factors involved in the instant proceedings necessitate rejection of the certificate applications which are the subject of these proceedings.

For the reasons hereinabove stated, the Staff's motion to dismiss is denied.

ADDITIONAL FINDINGS AND CONCLUSIONS

The following findings and conclusions, made upon consideration of the record made in these proceedings, are deemed to be supplementary and in addition to those hereinabove stated:

(1) The applicant, U.S. Natural, upon initiation of the proposed sale to Western will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the the Commission. It is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Upon initation of its proposed service and sale, the applicant, Western, a Delaware corporation with its principal place of business located in Houston, Texas, will be a "natural-gas company" within the meaning of the Natural Gas Act; will be subject to the jurisdiction of the Commission; and will be a pipeline company for the purposes of the Commission's Regulations.

(3) The facilities to be constructed and operated by Western as herein described and more fully described in the application in Docket No. CP63-329, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and construction and operation thereof by Western are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by U.S. Natural and the sale of natural gas by Western to CIG, all as heretofore described in the evidence and in the applications, will be made in interstate commerce subject to the jurisdiction of the Commission and such sale together with the construction and operation of any facility subject to the jurisdiction of the Commission necessary therefore are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The sale of natural gas by U.S. Natural, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefore are required by the present or future public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The construction and operation of the facilities proposed by Western are required by the present or future public convenience and necessity and the certificate therefor should be issued as hereinafter ordered and conditioned.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission on appeal or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity is hereby issued to each of the applicants referred to in findings 1 and 2 for the sale of natural gas in interstate commerce for resale as proposed in their applications together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor upon the terms and conditions of this order.

(B) The certificate issued to U.S. Natural Gas Corporation, the producer applicant, is hereby conditioned to prohibit any total initial price including all reimbursements and charges greater than 15 cents per Mcf at 14.65 psia, from the date of the issuance of this order until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificates issued herein are conditioned upon the acceptance of the applicants of amendments to their contract eliminating the discrepancies between the quantity take clauses in such contract and those in the Western Transmission Corporation-Colorado Interstate Gas Company contract and conforming such clauses in the former contract to those contained in the latter contract.

(D) The certificate issued herein to the producer applicant is conditioned upon its acceptance in writing with thirty days of the issuance of this order.

(E) The certificates issued herein are not transferrable and shall be effective only so long as each of the said applicants continues the acts and operation as herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose or prejudice any further proceedings or objection relating to the operation of any price or related provisions in the gas contracts here involved.

(G) A certificate of public convenience and necessity is hereby issued to Western Transmission Corporation for the sale of natural gas to Colorado Interstate Gas Company together with the construction and operation of all facilities subject to the jurisdiction of the Commission and necessary therefor or as described more fully in the application and amendments thereto.

(H) The general terms and conditions set forth in Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the certificate issued herein to Western Transmission Corporation, and the facilities hereby authorized shall be constructed and placed in actual operation, as provided by subparagraph (b) of Section 157.20 of the Commission's Regulations, within four months from the date on which the Commission's order issues.

(I) The certificate issued to Western Transmission Corporation is further conditioned to require that its rate for sales to Colorado Interstate Gas Corporation shall not at any time exceed the sum of five cents per Mcf plus any rate lawfully in effect for the sale of gas to Western Transmission Corporation by U.S. Natural Gas Corporation.

(J) Western Transmission Corporation shall within 90 days after the first two years of operation file detailed data setting forth its costs upon the basis of actual experience.

(K) Western Transmission Corporation shall file a tariff in accordance with Sections 154.31–41 of the Commission's Regulations Under the Natural Gas Act which shall show as the rate in effect the full compensation to be received by Western Transmission Corporation per Mcf of gas sold as provided for by the contract with Colorado Interstate Gas Company and the conditions herein imposed.

(L) Staff's motion to dismiss the applications of Western Transmission Corporation and U. S. Natural Gas Corporation is hereby denied.

MAX L. KANE,
Presiding Examiner.

OPINION NO. 422-A

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.*

MEMORANDUM OPINION AND ORDER ON REHEARING DENYING MODIFICATION OF OPINION NO. 422, CONTINUING DEFERRAL ON MOTIONS FOR EVIDENTIARY PROCEEDING, AND GRANTING STAY

(Issued May 27, 1964)

Syllabus

1. Decision with respect to refund issue [where temporary contained no refund condition] further deferred until after consideration of previously requested briefs. P. 1316.
2. Moratorium condition was made necessary by fact that any rate filings to a level higher than 18 cents per Mcf in District No. 4 will have adverse impact on pricing structure in area through operation of price redetermination clauses. P. 1317.
3. Escalation increases in excess of 18 cents cannot be allowed. P. 1318.
4. Compression and dehydration of gas are normal requirements imposed on producers and cannot be considered a premium feature of exceptional benefit to either pipeline or consumer. P. 1318.
5. Fact that any one producer's price may have *de minimis* effect on consumers, does not alone justify exceeding for such producer the in-line price for all producers in the area. P. 1319.
6. Upon rehearing, Commission *denies* applications for modification of prior opinion; *continues deferral* on motions for evidentiary proceeding and *grants* partial stay.

Commissioner Ross *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

O'CONNOR, *Commissioner:*

Applications for rehearing were filed to our Opinion No. 422 and Order issued March 23, 1964, in the above-entitled proceedings by both producers and parties representing the interests of consumers. Certain of the parties also filed motions for stay of the order pending judicial review. With regard to one issue, whether refunds should be ordered where the temporary authorizations did not contain a refund condition, the filings are divided—the producers contending that we have no power to direct refunds or, alternatively, that the proceedings should be reopened for the introduction of evidence bearing thereon, and the consumer representatives arguing that full refunds should be ordered forthwith. On April 30, 1964, we granted rehearing in order to afford further time for consideration of the issues raised.[1]

In our Opinion and Order we determined that the initial price required by the public convenience and necessity for the sales consolidated therein is 16 cents per Mcf, including all reimbursements and charges, and that the certificates issued in the various dockets should be conditioned to this price. We also determined that none of the producers had shown adequate justification for an allowance over 16 cents per Mcf by reason of any of the "special services" performed by them prior to delivery of their gas to the pipeline purchaser. The certificates were further conditioned to provide for a moratorium on the filing of price increases above 18 cents per Mcf for a stated period and for possible revision of the take-or-pay for requirement in each contract on the basis of the final order in the Docket No. R–199 proceeding. Finally, in those dockets where the temporary authorization had a refund condition, the certificate order requires the immediate refund of amounts collected in excess of the in-line level. The matter of whether refunds should be required in those cases where no refund condition was included in the temporary authorization, a decision on which was deferred pending the submission of additional briefs, was discussed in our April 30 order. As therein indicated, no determination has yet been made whether the refunds will be required or if the proceedings will be reopened for the introduction of additional evidence. Our decision with respect to the procedure to be followed will be made after consideration of the briefs and reply previously requested.

Several of the producers argue that we erred in excluding from the record and refusing to consider the economic and financial requirements evidence offered in support of their initial contract prices. They also contend that we erred in failing to grant the application for the issuance of a subpoena to compel the production of the material utilized in determining the Policy Statement rate for initial service in Texas District No. 4. These claims were adequately answered in the Opinion and in our earlier orders and initial decision issued in these proceedings. No useful purpose would be served in recounting the variety of material sought to be introduced or secured or our reasons for denial of the requests. Most of these arguments are similar in nature to those disposed of in the other certificate proceedings referred to in the Opinion and relied upon in this case. The contention, also made, that we have erred in applying the in-line formula as the sole determinant of the present or future public convenience and necessity is identical in all ways to the applicant's argument in Opinion No. 383 and where, in the order denying rehearing, we rejected the claim on the ground that the courts considering the issue have upheld our use of "sales prices in the area as the basis for fixing the initial prices in certificate cases and indicate that the Commission was not required to consider other evidence as to financial position and costs of production."[2]

---

[1] A listing of the parties applying for rehearing and/or stay is included in the footnotes to the April 30 order, 31 FPC 1041.

The charge of error in conditioning the certificates to the final order in the rule-making proceeding in Docket No. R-199 likewise has been considered by us in a number of past proceedings. On each occasion the requests for its deletion have been denied.[3] The provision was upheld in the recent decision of the D.C. Circuit, although the remand of the case has been temporarily stayed. As drafted, the condition provides for a maximum reduction in the take-or-pay requirement to 80 percent of the contract quantity and has been so limited that it will have only prospective application. "Should the producers here involved be required to file modified provisions they could then obtain review."[4] We are convinced that the protection of the public interest represented by the condition is necessary. The requests for modification will be denied.

All applications for rehearing filed by the producers allege that we erred in imposing a condition limiting the filing of price increases to 18 cents per Mcf pending a final decision in the Texas Gulf Coast area rate proceeding in Docket No. AR64-2 or until January 1, 1968, whichever is earlier. We have indicated that the condition was made necessary by the fact that any rate increase filings to a level higher than 18 cents per Mcf in District No. 4 will have an adverse impact on the pricing structure in this area through the operation of price redetermination clauses. We further indicated that the condition was the same as that applied in another proceeding, *Hassie Hunt Trust, Operator, et al.*, involving other sales by other producers from this same area. On April 17, 1964, we issued an order in the named proceeding denying rehearing on the price moratorium and specifying in detail the basis on which the 18-cent limitation was derived and our reasons for imposing the condition. As we stated, "The purpose of the Section 7 condition on the initial price can be effectively frustrated if six months later the producer is free to increase his price to levels that will raise the level of price redetermination rates in the area. In such circumstances the *CATCO* command to 'hold the line' would become almost impossible of fulfillment. The imposition of a moratorium on the certificate at the maximum price which, for the reasonable future, can be found to be consistent with the public interest is, we believe, a practical method of meeting the Commission's obligation with fairness to both the producers and the public." The producers whose initial contract prices are less than 18 cents may file increases up to this amount at such times as their contracts permit. Those producers whose initial price is 18 cents or more, and whose certificates have been conditioned down to the 16-cent in-line price, are able to file immediately for an increase under Section 4 to 18 cents and to collect this price in accordance with the appropriate terms. It is only in regard to escalations in excess of 18 cents that we have concluded increases cannot be allowed.

---

[2] *Texaco Seaboard, Inc.*, Opinion No. 383-A, issued August 27, 1963, 30 FPC 613 at p. 615. We note that in its petition for certiorari to review the D.C. Circuit's decision of January 23, 1964 in *Skelly*, Prado Oil & Gas Co. seeks to again present to the Supreme Court the question of the exclusion of "probative cost and financial evidence adduced by producers in support of their initial contract prices." (Brief for petitioners, p. 2.)

[3] *Skelly*, Opinion No. 362-A, 28 FPC 1065 at 1067; *Texaco Seaboard, Inc.*, Opinion No. 383-A, *supra*, p. 615; *Placid Oil Co.*, Opinion No. 398-A, 30 FPC 682, 683-684.

[4] *P.S.C. of New York* v. *F.P.C.*, No. 17582, *et al.*, 329 F. 2d 242, D.C. Cir., January 23, 1964, slip opinion p. 248.

The Supreme Court has re-emphasized the Commission's duty to exercise its certificating authority in order to prevent a triggering of general price raises in the recent case of the *F.P.C.* v. *H. L. Hunt, et al.*, decided March 30, 1964 376 U.S. 515. While the issue in the case dealt with our power to condition temporary certificates, the court stated that "[C]learly, the Commission was given the power to lay down the conditions precedent to the entry of the natural gas into interstate commerce . . ." and cited cases in which the Commission "required modification of many tariff and contract provisions as a condition to the granting of a certificate." The Court observed that "the experience since our opinion in *Atlantic Refining Co., supra.*, indicates that a triggering of price raises often results from the out of line initial pricing of certified case." The reasonable conditions herein imposed are to prevent such triggering. In this way, and to our minds in no other, can we continue to "hold the line" pending the determination of just and reasonable rates. Without it, the "complete, permanent and effective bond of protection" which the court has described as the purpose of the Act becomes grossly complete, temporary in duration and most importantly, of limited efficacy in protecting the consumers whose obligation it will be to pay the excess charges.[5]

Texaco Inc., *et al.*, Sun and Clark allege error in that, as they claim, we have failed to consider the value of the special services performed by the producers beyond the wellhead. In each instance the charge for the special services was included in the producer's initial contract price. We have indicated that application of the in-line comparison requires that we give consideration at the time of certification to "premium features" of a sale which are of objectively measurable value.[6] This is not to say, however, that all the special activities performed by the producer are *ipso facto* "premium features." Sun contends that it is entitled to an allowance over the in-line price because it incurs charges varying in amount from 2.0 to 3.74 cents per Mcf for gathering, compressing and dehydrating its gas prior to delivery to the pipeline purchaser. As stated in the Opinion, all but one sale permanently certified in the District at 15 cents or higher involve some gathering before the delivery is effected. Compression of the gas where necessary to enable its entry into the pipeline and dehydration for removal of excess water content are normal requirements imposed on producers and cannot be considered a premium feature of exceptional benefit to either the pipeline or the consumer.

---

[5] That the refund remedy is itself not adequate in many situations to protect the public was specifically recognized by the Supreme Court in its recent decision in *F.P.C.* v. *Tennessee Gas Transmission Company, et al.*, 371 U.S. 145, 154, where it stated:

> . . . True, the exaction would have been subject to refund but experience has shown this to be somewhat illusory in view of the trickling down process necessary to be followed, the incidental cost of which is often borne by the consumer, and in view of the transient nature of our society which often prevents refunds from reaching those to whom they are due.

This general inadequacy of the refund remedy is additionally highlighted in this proceeding by the extensive repercussions which could flow from the very collection of the increased rates provided in the rate schedules. *Placid Oil Co., et al.*, Opinion No. 398, issued July 17, 1963, 30 FPC 283, 297–298. This case is currently under review before the Fifth Circuit in *Callery Properties, Inc., et al.* v. *F.P.C.*, No. 20872, *et al.* [Ed. note, Reversed and remanded, 335 F. 2d 1004 : petitions for cert. pending.].

[6] *Medina Gathering Corp., et al.*, Opinion No. 397, issued July 16, 1963, 30 FPC 227, 231.

Although the transportation charges incurred by Clark in effecting delivery of its gas to the main line of Tennessee Gas Transmission Company were expressly considered at pages 637, 638 of the Opinion, Clark contends that we have disregarded these special circumstances in refusing to permit it an allowance over 16 cents per Mcf. The reason for refusing to grant an extra allowance is brought out by Clark itself where, in the application for rehearing, it stated, "Tennessee does not come anywhere near the producing leases of Clark and [Clark] *in order to sell the gas* has paid a gathering company to transport the gas to Tennessee." (emphasis added) Whether Clark's leases are less advantageously located in relation to the line of its buyer than are those of other sellers, or its reserves are not of sufficient size to warrant Tennessee's extension of a purchase lateral to the central points to which Clark does gather the gas, are immaterial to our determination. The fact is that Clark has incurred these additional costs solely "in order to sell the gas." As such they are as much a cost of doing business for Clark as any other expenses incurred by it in the production and sale of its gas. Clark's gas as delivered to Tennessee is worth no more, or the public convenience and necessity does not require that it be paid more, than the initial price at which we have determined the certificates should be issued. To the extent that other producers may not incur the additional transportation charge, they will perforce net a greater amount per Mcf assuming equality in the other costs of production. This is not to say, however, that the consumer is to be required to make up for what is an inherently lesser value of Clark's gas gathered at the central field point, nor is he to be required to compensate Clark an additional amount because of Clark's inability to strike a better bargain for its production.

Sun asserts error in our refusal to consider evidence relating its initial contract prices to prices paid by the ultimate consumer. The effect of any one producer's sales price may always be *de minimis* in its effect on consumers. This does not, alone however, justify exceeding for that one producer what is determined to be an in-line price for all producers in a given area. Sun also points out that one distributor has refused to flow through pipeline refunds. Thus, Sun assumes that the benefits of the prospective price reductions and refunds ordered in this proceeding will likewise not accrue to the ultimate consumer. As we have repeatedly stated, area in-line prices are established upon prices certified in the area. The lodging of refunds in either purchasing pipelines or local distributors has never been a determinant in establishing this price. Whether it is relevant in determining whether refunds should be ordered in temporaries not containing refund conditions is not before us at this time.

The application for rehearing filed by the Eastern Seaboard Interveners, which has been adopted by the Public Service Commission of New York and The Brooklyn Union Gas Co., alleges error in our finding of an in-line price level of 16 cents per Mcf. These arguments are the same as those dealt with in the Opinion; they include no material not previously considered by us in reaching our determination.

A number of applications for rehearing include motions for stay of ordering paragraphs (B), (C), (E), (F), (G), (H) and (I) pending the outcome of judicial review. Paragraphs (B) and (C) apply the 16-cent condition to the initial prices and require the filing of supplements to the presently effective rate schedules to reflect the conditioned price as the initial rate. Paragraphs (E) and (F) provide for the making of refunds under the four refund conditioned temporaries where deliveries were made at prices in excess of 16 cents per Mcf and for the submission of a report of compliance. Paragraph (G), as indicated earlier, deals with the issue regarding refunds under non-refund conditioned temporaries. Paragraphs (H) and (I), respectively, provide for the moratorium on the filing of price increases in excess of 18 cents per Mcf and condition the certificates to the outcome of the rule-making proceeding in Docket No. R-190. Consistent with our resolution of similar requests,[7] stay of paragraphs (C) and (E) will be granted under the terms hereinafter ordered. Stay of paragraphs (B) and (F) are unnecessary. The motions for stay of paragraph (G) have been denied in the April 30, 1964 order. Stay of paragraph (H) will be denied, since to grant the request would be to defeat the very purpose for which the condition has been instituted. Paragraph (I) has no immediate application and therefore, no stay of the provision is necessary.

The Commission finds:

(1) The assignments of error and grounds for rehearing and reopening set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 422, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as specified below.

(2) Good cause exists for granting, in part, the motions for amendment to the Order issued herein on March 23, 1964, so as to stay the actions required by paragraphs (C) and (E) pending judicial review of Opinion No. 422.

The Commission orders:

(A) The completion of the acts and compliance with the requirements set forth in ordering paragraphs (C) and (E) of the Order accompanying Opinion No. 422 are hereby stayed for a period of 30 days after conclusion of judicial review of said Opinion or until the Order otherwise becomes final, provided, however, that with respect to all amounts herein allowed to be charged in excess of the rate prescribed in paragraph (B) of the said Order, each applicant shall execute and file within 60 days an agreement and undertaking to refund all such excess amounts received after March 23, 1964, with interest at 7 percent per annum from the date of receipt to the date of payment, upon affirmation of the Order.

(B) The motions for stay of paragraphs (B), (F), (H) and (I) of the Order accompanying Opinion No. 422 are denied.

(C) The deferral of action on the motions for evidentiary hearing under paragraph (G) is continued until further order of the Commission.

(D) In all other respects said Opinion and Order are confirmed.

Commissioner Ross *dissenting* for the reasons set forth in his dissenting statement to Opinion No. 422 issued March 23, 1964, 31 FPC 623 at 642.

---

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP64-36

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued May 27, 1964)

Texas Eastern Transmission Corporation (Texas Eastern) on April 24, 1964, tendered for filing certain revised tariff sheets[1] to its FPC Gas Tariff, Second Revised Volume No. 1 and Original Volume No. 2, to become effective as of January 1, 1964. The revisions propose reductions in Texas Eastern's jurisdictional rates of approximately $2,365,000 annually, based upon sales for the year 1963.

The proposed rate filing reflects a reduction in Texas Eastern's cost of service based upon, (1) the recent change in the Federal income tax rate for corporations from 52% to 50%; (2) the lowering of its purchased gas costs resulting from rate reductions by Texas Gas Transmission Corporation and Southern Natural Gas Company, reflecting the reduction of Federal income tax rates; (3) a reduction in Texas Eastern's tax liability to the State of Texas by reason of the unconstitutionality of the Texas Dedicated Reserve Gas Tax; and (4) a lowering in rates of certain of Texas Eastern's gas suppliers.

In its letter of transmittal, Texas Eastern states that the reduction in rates reflecting a reduction in its tax liability to the State of Texas by reason of the unconstitutionality of the Texas Dedicated Reserve Gas Tax is in accordance with the letter order of the Commission dated September 25, 1962 in Docket Nos. G-12706 and G-18841 and that the refunds will be made when it has received such refunds from the State of Texas. As to the reduction in rates related to the rate reduction of certain of Texas Eastern's suppliers, it states that such reductions were not previously reflected in its rate reductions and are being made pursuant to paragraph (F) of the Commission's order issued January 25, 1961 in Docket Nos. G-12706 and G-18841.

Texas Eastern urges the Commission to waive to the extent necessary, its Regulations under the Natural Gas Act in order to permit the tendered revised tariff sheets to become effective on January 1, 1964.

The proposed rate filing does not change or otherwise affect Texas Eastern's existing obligations under any settlement agreements or Commission orders in any proceedings involving the rates and charges of Texas Eastern.

No protests or objections to Texas Eastern's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the 30-day notice and other requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified above may become effective as hereinafter ordered.

---

[1] Second Revised Sheets Nos. 12A, 28A and 44B; Fourth Revised Sheets Nos. 65G and 65H; Fifth Revised Sheets Nos. 7, 9, 10, 11, 14, 16, 17, 19, 23, 30, 32, 33, 35, 39, 41, 44, 46, 48, 49, 51, 55, 65B, 65F; Sixth Revised Sheets Nos. 27, 56 and 59; Seventh Revised Sheet No. 24; Ninth Revised Sheet No. 61 to Texas Eastern's FPC Gas Tariff, Second Revised Volume No. 1 and First Revised Sheet No. 322 and Third Revised Sheets Nos. 232 and 235 to Texas Eastern's FPC Gas Tariff, Original Volume No. 2.

(2) The proposed revised tariff sheets and the rate reductions contained therein are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The 30-day notice requirement and other provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets described above are accepted for filing to become effective January 1, 1964.

(B) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission Staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Texas Eastern or any other persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.

ORDER DENYING MOTION FOR RECONSIDERATION OF ORDER DENYING MOTION TO REOPEN PROCEEDINGS FOR ADDITIONAL EVIDENCE

(Issued May 27, 1964)

On April 29, 1964, Placid Oil Company, Hassie Hunt Trust, H. L. Hunt and Hunt Oil Company (Movants) filed a "Joint Application for Rehearing and Reconsideration" of our order of March 31, 1964, denying Movants' motion to reopen the above-captioned proceeding for additional evidence. Since our order of March 31, 1964, is not a "final decision or order" and is not subject to an application for rehearing,[1] we shall treat Movants' pleading as a motion for reconsideration and deny such motion.

In both the motion to reopen and the motion for reconsideration of the denial of such motion, Movants contend that the examiner excluded proper evidence and that "new evidence", developed in Area Rate Proceeding, AR61-2, should be admitted into this proceeding. The latter is characterized by Movants as "Group Composite Cost of Service Exhibits".

In our order denying Movants' motion to reopen, *supra*, we concluded that both the excluded evidence and the "new evidence" is of a kind not relevant in producer certificate cases where the proper initial price should be determined by reference to the "in-line" price in the area rather than upon the determination of just and reasonable rates. (See cases cited therein, 31 FPC 756). We adhere to that view.

The Commission finds:

No new facts or principles of law have been presented in the motion for reconsideration which were not fully considered by the Commission prior to the issuance of the aforesaid order denying motion to reopen the proceeding for additional evidence, or, having now been so considered, warrant further hearing, modification or revocation of such order.

---

[1] See Rules of Practice and Procedure, Sec. 1.34 (a) (18 CFR 1.34 (a)).

The Commission orders:

The joint motion for reconsideration filed herein on April 29, 1964, by Placid Oil Company, Hassie Hunt Trust, H. L. Hunt and Hunt Oil Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

F. JULIUS FOHS, ET AL., DOCKET NO. RI61–411

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued May 28, 1964)

On April 24, 1964, F. Julius Fohs, *et al.* (Fohs) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for sale of natural gas to Tennessee Gas Transmission Company (TGT) by Fohs. The offer relates to a sale made under Fohs' FPC Gas Rate Schedule No. 4 in Matagorda County, Texas (Texas R. R. Com. District No. 3). The proposed increased rate of 16.16947¢ was suspended by order of the Commission for the statutory period, and was made effective by Fohs on November 27, 1961.

Under the terms of the offer, Fohs proposes to eliminate the favored-nation, price redetermination and the present periodic escalation provisions from its rate schedule and to establish a 14.6¢ per Mcf rate for the subject sale. Fohs also proposes to limit future periodic escalations to 1.0¢ per Mcf on January 1, 1969, and five years thereafter. Fohs' annual revenues will be decreased about $20,800 from the presently effective rates. No protests or objections have been filed to the offer.

Fohs will refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $41,600 exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Fohs' offer of settlement shall not be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Fohs' rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Fohs' on April 24, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Fohs' April 24, 1964, is hereby approved in accordance with the provisions of this order.

(B) Fohs shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 14.6¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 4, eliminating the favored-nation, price redetermination clauses, and amending the periodic escalation provisions therein. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Fohs shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate with simple interest at 7 percent, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order; the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Fohs has complied with the terms and conditions of the order, the rate and charge of 14.6¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Fohs' offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Fohs, including area rate or other similar proceedings.

Before Commissioners: Harold C. Woodward, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SINCLAIR OIL & GAS COMPANY, ET AL., DOCKET NO. G-16760, ET AL.; UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. G-18389

ORDER DENYING MOTION TO SEVER AND FOR ISSUANCE OF PERMANENT CERTIFICATE

(Issued May 28, 1964)

On April 14, 1964, Union Oil Company of California (Union) filed a motion in the above-styled proceedings requesting severance from the consolidated proceedings in Docket No. G-16760, *et al.*,[1] and for the issuance of a permanent certificate for sales which it is presently making to Florida Gas Transmission Company.[2] These sales, made under contract dated February 18, 1959, from the Kentucky Mott Field, Victoria County, Texas, have been made pursuant to a temporary certificate granted February 19, 1960, in Docket No. G-17896, *et al.* Union's initial rate was 17¢ per Mcf, however, a rate of 18¢ per Mcf is being collected subject to refund in Docket No. RI63-355. This rate has been collected since March 4, 1963. Union now proposes a prospective settlement rate of 16¢ per Mcf and requests that its application be severed from the consolidated proceedings in Docket No. G-16760, that it be granted a permanent certificate at the 16¢ rate, and be relieved of refund obligations which may arise in Docket No. RI63–355. In support of its motion, Union states that the amounts involved are *de minimis* and do not justify its participation in the present proceedings.

---

[1] Consolidated by order of the Commission issued March 25, 1964.

[2] Formerly designated Coastal Transmission Corporation.

No responses or answers to the motion have been filed.

The Commission finds:

In view of the consolidated proceeding in Docket No. G–16760, *et al.*, instituted to determine the in-line rate for sales of natural gas from Texas Railroad District No. 2, good cause has not been shown for allowing Union's proposed rate or for permitting severance of this matter from such consolidated proceedings or for relieving Union of refund obligations in Docket No. RI63–355.

The Commission orders:

Union's motion for severance and issuance of a permanent certificate filed April 14, 1964 in the above-styled proceedings is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–12193, ET AL.,[1] AND G–12401

ORDER AMENDING ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued May 28, 1964)

By order issued May 5, 1964, *supra* p. 1101, we approved a rate settlement proposal filed in these proceedings by Socony Mobile Oil Company, Inc. (Socony) on March 30, 1964. Subsequent to the issuance of said order, a review of the files and records of the Commission concerning the proceedings involved herein, and reconsideration of certain matters in the light of other of our recent orders approving general rate settlements, indicate that the order should be amended in certain respects.

It appears that sales of natural gas by Socony to Lone Star Gas Company in the Katie Field, Oklahoma, under Socony's Rate Schedule No. 77 have ceased. Therefore, the Seventh Amendment to the Statement of General Policy, No. 61–1 is not applicable thereto, and the settlement rate set forth on page 1112 of Appendix A to the order should be 11.0¢ per Mcf.

On page 1104 of the order, in the last paragraph, we provide that the certificate to be issued in Docket No. CI61–1281 shall be conditioned to provide that the rate for acreage in the Oklahoma Panhandle shall not exceed 17¢ per Mcf at 14.65 psia, including tax reimbursement. However, we do not provide for an initial rate for the acreage in the Other Oklahoma area for the sale under said docket. That rate shall not exceed 15.0¢ per Mcf at 14.65 psia, including tax reimbursement, and said certificate shall be so conditioned.

Included in the settlement were three rate schedules in Texas Railroad Commission District Nos. 2 and 4 where sales are being made under temporary certificates and in-line rates have not been determined for such sales. Consistent with our settlement orders in *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837, and *Sinclair Oil & Gas Company*, Docket No. G–9291, *et al.*, 30 FPC 5 (order issued July 1, 1963), we shall condition the certificates to require adjustment of the rates under Socony's FPC Gas Rate Schedule Nos. 236–2, 328 and 330 to conform with the appropriate in-line price determination. Socony has advised that it is agreeable to such a condition.

---

[1] The additional dockets involved herein are set forth in the Appendices to the order issued herein on May 5, 1964, and additionally certain proceedings are included by this order.

The order herein of May 5, 1964, included rates under Socony's FPC Gas Rate Schedule No. 332 in Texas Railroad Commission District No. 4 and its Rate Schedule No. 164 in South Louisiana at our guideline ceilings. Permanent certificates had previously been issued for these sales at or above our guideline ceilings. In view of the fact that the lawfulness of these rates is presently under review in area proceedings in Docket Nos. AR64–2 and AR61–2, respectively, and the moratorium agreed to by Socony, approval of the settlement rates is appropriate.[2]

We shall also amend the order of May 5, 1964, herein, to correct typographical errors and inadvertent omissions in listing dockets for severance and termination.

The Commission finds:

Amendment of the order issued herein on May 5, 1964, as hereinafter provided is in the public interest, and is appropriate in carrying out the provisions of the Natural Gas Act.

The Commission orders:

The order approving rate settlement proposal, terminating proceedings and prescribing refunds, issued in these proceedings on May 5, 1964, is hereby amended in the following respects:

(1) Approval of this settlement is conditioned so as to require Socony to reduce its rate under its FPC Gas Rate Schedule No. 328, Docket No. CI63–875, to the in-line rate finally determined, after court review or otherwise, in the *Sinclair Oil & Gas Company, et al.*, proceedings, Docket No. G–17760, *et al.*, and to reduce its rates under its Rate Schedule Nos. 236–2 and 330, Docket Nos. CI60–653 and CI63–465, respectively, to the in-line rate finally determined after court review or otherwise, in the *Amerada Petroleum Company, et al.*, proceedings, Docket No. CI62–1544, *et al.* In the event that a rate is reduced as a result of such proceedings, Socony shall refund excess amounts collected from the date of this order. The refund requirement imposed herein shall not be construed to affect or limit the position of the parties in the *Sinclair* or *Amerada* proceedings with respect to refund obligations under temporary authorizations.

(2) Ordering Paragraph (G) of the order (page 1106) is hereby amended to read:

(G) Upon full compliance by Socony with all the terms and provisions of this order, as amended, the Section 5(a) proceedings in Docket No. G–12401, and the Section 4(e) proceedings listed in Appendix A hereto, except those related to Rate Schedule No. 16, shall terminate.

(3) Ordering Paragraph (H) of the order (page 1106) is hereby amended to read:

(H) Upon termination of the Section 4(e) proceedings listed in Appendix C, as amended, said proceedings shall be severed from the consolidated pro-

---

[2] See order approving settlement, *Texaco Inc.*, Docket No. G–8969, *et al.*, issued December 30, 1963, 30 FPC 1631.

ceedings in Docket Nos. AR61–2, AR64–1 and AR64–2, respectively; the Section 7(c) proceedings listed in Appendix C are hereby severed from their respective consolidated proceedings.

(4) Page 1113 of Appendix A to the order is hereby amended to add Docket No. RI60–391 as a Section 4(e) proceeding involving Socony's Rate Schedule No. 233. Additionally, a footnote ("QQ") should be shown to the data concerning Socony's Schedule No. 326 set forth on page 1113, to note that the proceedings in Docket No. RI60–198 are terminated only insofar as they pertain to Socony.

(5) Appendix C to the order is hereby amended to add Docket Nos. G–20300, G–20301 and RI60–391 to the Section 4(e) proceedings presently consolidated with Docket No. AR64–1. Additionally, Docket No. G–20344 is added to the Section 4(e) proceedings presently consolidated with Docket No. AR64–2.

(6) Docket No. G–12480 in footnote 8 on page 1104 of the order is corrected to read Docket No. G–12840.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TRANSWESTERN PIPELINE COMPANY, ET AL., DOCKET NO. CP63-204, ET AL.

ORDER DENYING MOTION TO SUSPEND OR TERMINATE PROCEEDINGS

(Issued June 1, 1964)

On April 30, 1964, the Public Utility Commissioner of Oregon (Oregon) filed with this Commission a motion to suspend or terminate the above-named proceedings. This motion alleges that as a result of the decision in *United States* v. *El Paso Natural Gas Company, et al.*, 376 U.S. 651, No. 94, October term, 1963, decided April 6, 1964, the former Pacific Northwest Pipeline Corp. (Pacific) will once again become a competitor for the California market, and that unless the present proceedings are suspended, or, in the alternative, terminated, Pacific will be precluded from effective competition for that market.

Answers to this motion were filed by El Paso Natural Gas Company, Gulf Pacific Pipeline Company, Pacific Lighting Gas Supply Company, Southern California Edison Company, Humble Oil & Refining Company, The Air Pollution Control District of The County of Los Angeles, and the Commission Staff. All of these answers, as well as a telegram filed by Transwestern Pipeline Company, were in opposition to the Oregon motion.

Oregon has taken the position that as a result of the Supreme Court's decision a new "Pacific Northwest Pipeline Corporation" must be created, El Paso must be divested of this new corporation and the new corporation will become a competitor for the California market. In the meantime, it would appear, neither El Paso, nor any other pipeline company should be permitted to expand service to the gas market in California, whatever the needs may be. Of course, Oregon does not say, but it must necessarily follow, that any expansion by the existing El Paso into the Pacific Northwest territory, must be held in abeyance pending the re-creation of Pacific Northwest. Such a result, in either case, is undesirable and unwarranted. It would serve no purpose to delay expansions into either of these territories pending the rebirth of Pacific Northwest.

Although the Supreme Court ordered divestiture without delay, we cannot assume that it will occur instantaneously. We must recognize that the economics of implementing the Court's decision must be considered. The new company, and the old, must have economic stability. The nature of the divestiture, intertwined as it is with the necessity for action both by the District Court and the Commission, almost without precedent, dictates that it must take some time to complete. It would be highly improper for this Commission to delay the instant proceedings indefinitely on the mere speculation that at the end of that period a new company will be created which will be both willing and able to serve southern California at that time.

Indeed it can hardly be alleged that the Supreme Court contemplated any such action in the *El Paso* opinion, since they referred to "* * * new increments of demand that may emerge with an expanding industrial or household use of gas." (p. 660) There is no reason for this Commission to delay these proceedings, for a reconstituted Pacific Northwest should find ample room for expansion in the foreseeable future.

The Commission cannot penalize the consumers in southern California by denying to them natural gas (assuming a need therefor) which existing pipeline companies are able and willing to serve to them, or, for that matter, to penalize those natural gas companies which are presently seeking to serve that market. This proceeding has been designed both to test those needs and to determine whether any of the companies whose applications are consolidated in the proceeding should construct and operate facilities to deliver additional volumes of gas to the southern California market. It should not be delayed indefinitely on the chance that a reconstituted Pacific Northwest could immediately compete for the same market.

The Commission orders:

The Public Utility Commissioner of Oregon's motion to suspend or terminate these proceedings should be, and is hereby, denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

CUMBERLAND NATURAL GAS COMPANY, INC., DOCKET NO. G-18740; J. C. MILLER OIL COMPANY, INCORPORATED, DOCKET NO. G-18743; TRUMAN DRAKE, DOCKET NO. G-18744; CREEK OIL COMPANY, INC., DOCKET NO. CI64-457; J. C. MILLER OIL COMPANY, INCORPORATED, DOCKET NO. CI64-1107

ORDER DENYING STAY OF ORDER, GRANTING REHEARING AND RECONSIDERATION OF ORDER VACATING ORDER IN PART, DENYING MODIFICATION OF TEMPORARY CERTIFICATES, GRANTING INTERVENTIONS, CONSOLIDATING PROCEEDINGS AND SETTING DATE OF HEARING

(Issued June 1, 1964)

On June 8, 1959, J. C. Miller Oil Company, Incorporated (Miller) filed in Docket No. G-18743 and Truman Drake filed in Docket No. G-18744, applications for certificates of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act for authority to sell natural gas to Cumberland Natural Gas Company, Inc. (Cumberland).

Cumberland concurrently filed a related application in Docket No. G-18740, for a certificate of public convenience and necessity pursuant to Section 7(c) of the Act, for authority to construct gathering facilities and to sell natural gas to Texas Gas Transmission Corporation (Texas Gas).

All of the above applications contained requests for the issuance of temporary certificates, and temporary certificates were issued in all three dockets. However, action on the permanent certificates was held in abeyance pending receipt of further information.

Notice of the filing of these applications was issued April 7, 1964, (29 F.R. 5518).

On October 16, 1963, Creek Oil Company, Inc. (Creek) filed in Docket No. CI64-457 an application for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Act, for authority to sell natural gas to Cumberland. Cumberland thereupon amended its application in Docket No. G-18740 to include construction and operation of additional facilities necessary to purchase the gas from Creek.

Tartan Oil Company (Tartan) filed petitions for leave to intervene in Docket Nos. CI64–457 and G–18740 on November 14, 1963, and December 11, 1963 respectively.

On March 18, 1964, Miller filed in Docket No. CI64–1107 an application, pursuant to Section 7(b) of the Act, for permission and approval to abandon the sale of gas and use of facilities temporarily authorized in Docket No. G–18743. Notice of this application was issued March 24, 1964, (29 F.R. 4690) and a petition for leave to intervene together with an objection and motion to dismiss the abandonment application and terminate that proceeding, was thereupon filed by Cumberland on April 20, 1964.

On April 2, 1964, an order was entered in Docket Nos. G–18740 and CI64–457 granting, inter alia, a temporary certificate to Creek to sell gas to Cumberland as proposed in its application, denying Tartan's petition for leave to intervene in that proceeding, and amending the temporary certificate previously granted to Cumberland to conform to Cumberland's application as amended.

On May 4, 1964, Tartan filed a petition for (1) rehearing and/or reconsideration of our order of April 2, 1964, (2) stay of said order pending such rehearing and (3) vacation of said order to permit Tartan to intervene in Docket No. CI64–457. The petition further requests certain amendments to be made to the temporary certificates issued in Docket Nos. G–18740 and CI64–457.

The petition seeks vacation of the Commission's order for the purpose of allowing Tartan full participation in the matters relating thereto for the purpose of showing that the reserves of Creek, and the availability of gas therefrom are so small (700 Mcf daily or a maximum of 255,500 Mcf annually) it is not in the public interest to grant authorization for the sale thereof, or for the construction of facilities by Cumberland to the source thereof.

Tartan further asserts the proposals of Creek to sell and deliver gas to Cumberland at the rate of 360,000 Mcf annually from reserves stated to be only 1,000,000 Mcf will exhaust Creek's reserves in three years, and such rapid drainage can cause water to rise in the area of Creek's well so as to cut the field in two, defeat recovery of gas from other parts of the field, and make eventual use of the field for storage of off-peak gas for peak-day deliveries impossible.

In addition to the assertions that it is uneconomic to permit Creek to sell gas to Cumberland and to permit Cumberland to extend its facilities to Creek's production, Tartan assails the Commission action in granting Creek and Cumberland temporary authorizations on the asserted grounds (1) that no emergency situation exists permitting temporary authorizations to be issued by the Commission, and (2) the Commission erroneously held that in any event Tartan had not demonstrated any basis for intervention, since the functions of prorating takes and adjusting correlative private rights of producers are within the purview of the State of Kentucky, and not of the Commission.

It is clear that, even assuming the existence of Tartan's assertions of fact, it would not be appropriate for the Commission to stay its order of April 2, 1964. To stay our said order and/or to modify the temporary authorizations granted to Creek and Cumberland would, under the circumstances, be tantamount to denying Creek the very right being presently exercised by Tartan; namely, the production of natural gas from its properties.

However, it appears from the petition filed by Tartan that Tartan may be in a position to provide useful information to the Commission in the hearing with respect to the over-all nature of Cumberland's activities which is clearly warranted by the various allegations which have been made in these several dockets.

It also appears that the public interest would be served by setting for early consolidated hearing the various certificate applications plus Miller's application to abandon its sales to Cumberland.

As purchaser of the gas, Cumberland has an interest in said abandonment proceeding that is not adequately represented by existing parties. However, it is clear that there can be no basis for denying Miller the right to a hearing on his abandonment application, and Cumberland's petition to dismiss or terminate that proceeding must be rejected.

The Commission finds:

(1) The grounds relied on by Petitioner Tartan in Docket Nos. CI64–457 and G–18740 are insufficient to warrant stay of our order of April 2, 1964, or any modification of the temporary certificates issued in said proceedings.

(2) Upon reconsideration of the Petition of Tartan for leave to intervene in Docket No. CI64–457, and upon initial consideration of the petitions of Tartan for leave to intervene in Docket No. G–18740 and of Cumberland for leave to intervene in Docket No. CI64–1107, it appears that the participation of the above-named Petitioners in said proceedings may be in the public interest, and that we should exercise our discretion to permit such intervention.

(3) These related matters should be heard on a consolidated record and disposed of under the applicable rules and regulations.

The Commission orders:

(A) The motion of Tartan that our order of April 2, 1964, be stayed or, in lieu thereof, that the temporary certificates issued in Docket Nos. CI64–457 and G–18740 be modified, is hereby denied.

(B) The petition of Tartan for rehearing and/or reconsideration of our denial of Tartan's petition for leave to intervene in Docket No. CI64–457, is hereby granted, and paragraph (K) of our order of April 2, 1964, is hereby vacated.

(C) Tartan is hereby permitted to intervene in Docket Nos. CI64–457 and G–18740 subject to the rules and regulations of the Commission.

(D) Cumberland is hereby permitted to intervene in Docket No. CI64–1107 subject to the rules and regulations of the Commission.

***Provided, however,* that the participation of each Intervener in these proceedings shall be limited to matters affecting asserted rights and interests specifically set forth in their petitions to intervene; and**

***Provided, further,* that the admission of such Interveners shall not be construed as recognition by the Commission that they might be aggrieved by any order or orders entered in these proceedings.**

(E) The motion of Cumberland to dismiss the application of Miller and terminate the proceedings in Docket No. CI64–1107 is hereby denied.

(F) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by Section 7 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a consolidated hearing will be held on July 13, 1964, at 10:00 a.m. (EDT) in a Hearing Room of the Federal Power Commission, 441 G Street, N. W., Washington, D.C. concerning the matters involved in and the issues presented by all of the applications listed in the heading hereto.

(G) Direct testimony and exhibits of all applicants shall be filed in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.26) on or before July 8, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP61-143; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61-149; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-163

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued June 2, 1964)

On March 23, 1964, Colorado Interstate Gas Company (Colorado) in Docket No. CP61-143; on March 30, 1964, Natural Gas Pipeline Company of America (Natural) in Docket No. CP61-149, and Arkansas Louisiana Gas Company (Arkansas Louisiana) in Docket No. CP61-163 filed applications to amend further the Commission's order issued January 3, 1963, in Docket No. CP61-143, *et al.*, as amended, by authorizing the extension of the duration of the certificates of public convenience and necessity issued by said order, as amended, until May 1, 1965, all as more fully set forth in the respective applications to amend further.

The order of January 3, 1963, 29 FPC 8, as amended, issued certificates authorizing Colorado to sell up to 25,000 Mcf of natural gas per day at 14.5 cents per Mcf to Arkansas Louisiana and authorizing the exchange of natural gas among Colorado, Arkansas Louisiana and Natural in order to effect said sale of gas. Said certificates originally were limited in duration to a period extending through December 31, 1963; by order issued December 30, 1963, this period was extended to May 1, 1964.

The gas sold by Colorado is delivered to Arkansas Louisiana by Natural in Grady County, Oklahoma; Colorado delivers equivalent volumes to Natural at an interconnecting point between their two systems in the Mocane field, Oklahoma. Colorado states that it has a supply of gas temporarily in excess of its current market requirements and that, therefore, it is continually attempting to make short-term sales pending future disposition of gas on a long-term basis. Further, Applicant states that the proposed short-term sale will assist in reducing the possibility of having to pay for gas not taken or of having to make gas supply prepayments and in minimizing possible liability under its leases.

On March 23, 1964, Colorado tendered for filing its Third Revised Sheet Nos. 37 and 39, Fifth Revised Sheet No. 38, Second Revised Sheet No. 39A and Original Sheet No. 39B to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the sale of gas to Arkansas Louisiana. Also, on March 23, 1964, Colorado tendered for filing its Fourth Revised Sheet No. 49 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the exchange arrangement.

On March 31, 1964, Natural tendered for filing its Second Revised Sheet No. 32 and Fourth Revised Sheet Nos. 33 and 34 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the exchange arrangement.

Due notice of the filing of the applications to amend and opportunity for hearing thereon has been given by publication in the Federal Register of May 6, 1964 (29 F.R. 5975). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commissioner's order issued January 3, 1963, in Docket No. CP61-143, *et al.*, as amended, be further amended as hereinafter ordered.

(2) The public convenience and necessity require that the revised tariff filings of Natural and Colorado, hereinabove described, be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) The Commission's order issued January 3, 1963, in Docket No. CP61–143, *et al.*, as amended, be and the same is hereby further amended by authorizing the extension of the duration of the certificates of public convenience and necessity issued by said order, as amended, to May 1, 1965, all as hereinbefore described and as set forth in the respective applications to amend.

(B) Colorado's Third Revised Sheet Nos. 37 and 39, Fifth Revised Sheet No. 38, Second Revised Sheet No. 39A, Original Sheet No. 39B and Fourth Revised Sheet No. 49 to its FPC Gas Tariff, Second Revised Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

(C) Natural's Second Revised Sheet No. 32 and Fourth Revised Sheet Nos. 33 and 34 to its FPC Gas Tariff, Second Revised Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

(D) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP64–154; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64–155; THE ATLANTIC REFINING COMPANY, DOCKET NO. CI64–781

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued June 2, 1964)

On January 6, 1964, American Louisiana Pipe Line Company (American Louisiana) filed in Docket No. CP64–154 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary to expand its system capacity by approximately 88,000 Mcf per day in order to meet the increased demands of existing customers for the 1964-65 heating season, all as more fully set forth in the application on file with the Commission.

Specifically, American Louisiana proposes to construct and operate the following facilities:

(1) A total of 50,000 additional horsepower on Applicant's main line as follows:

(a) 10,000 horsepower at each of three new compressor stations to be known as Station Nos. 1, 7 and 10;

(b) 12,000 horsepower at one new compressor station to be known as Station No. 4;

(c) 2,000 horsepower at each of two existing compressor stations—Station Nos. 5 and 9; and

(d) 4,000 horsepower at existing compressor Station No. 2;

(2) 77.7 miles of 12 to 20-inch diameter gas supply lines in Louisiana; and

(3) Two new purchase meter stations—one each in the Jeanerette and Bayou Fields, St. Mary Parish, Louisiana.

The application indicates that increases in the contract demands of Michigan Consolidated Gas Company and Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) are proposed in the amounts of 50,000 Mcf per day and 35,000 Mcf per day, respectively. The increase in contract demands of certain other customers is proposed in the total amount of 2,670 Mcf per day.

American Louisiana states that the gas supply required to meet the proposed increases in sales will come from reserves connected to its system since its last expansion and from supplies American Louisiana has contracted to purchase from The Atlantic Refining Company (Atlantic), in the Jeanerette and Bayou Fields, St. Mary Parish, Louisiana, at an initial price of 20.625 cents per Mcf.

The total estimated cost of the proposed facilities is $25,107,000, which cost will be financed with funds presently available and which will be generated internally.

On January 6, 1964, as supplemented on April 9, 1964, Michigan Wisconsin filed in Docket No. CP64–155 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary to expand its system capacity by approximately 70,000 Mcf per day in order to meet the increased demands of existing customers for the 1964-65 heating season, all as more fully set forth in the application on file with the Commission.

Michigan Wisconsin states that its customers have requested it to supply increases in maximum daily quantities aggregating 71,994 Mcf for the contract year 1964-65. To meet these increased demands, Michigan Wisconsin proposes to purchase an additional 35,000 Mcf per day from American Louisiana and to expand utilization of storage. The application shows that to expand the utilization of storage it will be necessary to complete the second stage of development of the North Hamilton storage field and to provide additions and improvements to facilities in the Austin storage field. The application shows further that these fields are owned by Michigan Consolidated Gas Company (Consolidated) and leased to Michigan Wisconsin. The additional facilities for the two fields will be constructed by Consolidated at an estimated cost of $2,571,000. Further, Michigan Wisconsin will lease said facilities and proposes herein to operate same.

Further, Michigan Wisconsin states that to accommodate normal load growth in various segments of its system, it proposes to construct and operate the following facilities:

(1) 8.2 miles of 30-inch loop line between Stations 10 and Wisconsin A and an additional 2500 horsepower at the latter station;

(2) 9.8 miles of 12-inch loop line on the line extending to Two Rivers, Wisconsin;

(3) 5.5 miles of 10-inch loop line on the line extending to Columbus, Wisconsin; and

(4) 8.7 miles of 12-inch and 12.7 miles of 8-inch loop lines on the line extending to Tomahawk, Wisconsin.

The total estimated cost of these facilities is $3,712,000, which cost will be financed by bank loans and funds generated internally; however, it is contemplated that financing will ultimately be part of an overall financing program involving the issuance of First Mortgage Pipe Line Bonds.

On January 7, 1964, as amended on February 18, 1964, Atlantic filed in Docket No. CI64–781 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to American Louisiana produced from the Jeanerette and Bayou Sale Fields, St. Mary Parish, South Louisiana, all as more fully set forth in the application, as amended, on file with the Commission. The initial price is 20.625 cents per Mcf at 15.025 psia.

Atlantic's application, as amended, is similar to those settlement proposals submitted and approved with respect to the applications for certificates consolidated with *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.* Atlantic has agreed that reimbursement for future tax increases should be limited to 50 percent of the increase during the initial first five year period. Additionally, the rate is to be subject to prospective adjustment dependent upon the final determination in Docket No. AR61-2, *et al.*

The provisions for adjustments in rates according to our order or orders in Docket No. AR61-2 seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in the instant case which will control our conclusions in Docket No. AR61-2. The instant proposal also provides that adjustments in price growing out of Docket No. AR61-2 should go into effect upon conclusion of judicial review of our final order therein. We can not now commit the Commission to staying conditionally the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding, and our approval of the application, as amended, herein, will be so conditioned.

On January 7, 1964, Atlantic filed the gas sales contract, dated December 17, 1963, as its proposed FPC Gas Rate Schedule No. 284, together with two letter agreements each dated December 17, 1963, as its proposed Supplement Nos. 1 and 2 to said rate schedule.[1] On February 18, 1964, Atlantic filed a letter dated February 18, 1964, as its proposed Supplement No. 3 to said rate schedule.

On February 5, 1964, as amended on May 1, 1964, Wisconsin Public Service Corporation filed petitions to intervene in Docket Nos. CP64-154 and CP64-155. The burden of such filings is that petitioner does not request formal hearing and does not object to the hearing and disposition of the subject applications under the shortened procedure provided for by the Commission's Rules, but that petitioner desires to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the shortened hearing procedure is being used herein, no further action on the intervention petitions appears necessary.

On February 19, 1964, as amended on May 1, 1964, the Public Service Commission of Wisconsin filed a notice of intervention in Docket Nos. CP64-154 and CP64-155. Said notice states that there is no objection to the hearing and disposition of the subject applications under the shortened procedure provided for by the Commission's Rules, and, further, that in the event the shortened procedure is used herein, said notice may be disregarded.

On January 29, 1964, the Public Service Commission of the State of New York filed a notice of intervention in Docket No. CI64-781. However, on February 24, 1964, said notice was withdrawn.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the applications in Docket Nos. CP64-154, CP64-155 and CI64-781 has been filed.

At a hearing held on May 28, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, supplements, amendments and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

---

[1] Proposed Supplement No. 1 is a transmittal letter and agreement and proposed Supplement No. 2 modifies Exhibit B to the gas sales contract.

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 1, 1954, Docket No. G-2306, *et al.* (13 FPC 380).

(2) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 14, 1950, in Docket No. G-1302 (9 FPC 167).

(3) Applicant, The Atlantic Refining Company, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The proposed facilities hereinbefore described, as more fully described in the applications in Docket Nos. CP64-154 and CP64-155, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by American Louisiana and Michigan Wisconsin and the operation of the facilities Michigan Wisconsin proposes to lease from Consolidated are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sale of natural gas by Atlantic hereinbefore described, as more fully described in the application in Docket No. CI64-781, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Atlantic, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The sale of natural gas by Atlantic, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by American Louisiana and Michigan Wisconsin and the operation of the facilities Michigan Wisconsin proposes to lease from Consolidated are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificates issued hereinafter to American Louisiana and Michigan Wisconsin in Docket Nos. CP64-154 and CP64-155, respectively, and the rights granted thereunder be conditioned upon said Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(10) The certificate issued hereinafter to Michigan Wisconsin should be conditioned as follows:

(1) The monthly reports being filed by Michigan Wisconsin in compliance with the Commission's order in Docket No. CP63–230 issued November 12, 1963, be continued for the contract year commencing September 1, 1964.

(2) Prepaid gas, applicable to presently certificated gas supply arrangements included in the rate base in any subsequent rate filing will not exceed the balance as of December 31, 1963, either as to volume or amount.

(11) Atlantic's proposed FPC Gas Rate Schedule No. 284, together with Supplement Nos. 1, 2 and 3 thereto, should be accepted for filing to be effective on the date of initial delivery.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Applicants, American Louisiana Pipe Line Company and Michigan Wisconsin Pipe Line Company, authorizing the former to construct and operate the proposed facilities and to sell and deliver natural gas and authorizing the latter to construct and operate the proposed facilities, to operate the facilities to be leased from Consolidated and to sell and deliver natural gas, as hereinbefore described, all as more fully described in the application in Docket No. CP64–154 and the application, as supplemented, in Docket No. CP64–155, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued, upon the conditions set forth herein, authorizing the sale by Atlantic of natural gas in interstate commerce for resale for ultimate public consumption, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application, as amended, in Docket No. CI64–781.

(C) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon American Louisiana's and Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized in paragraph (A) above shall be constructed and placed in actual operation and the operation of the facilities by Michigan Wisconsin to be leased from Consolidated shall commence and the sales and delivery of natural gas authorized in paragraph (A) above shall have commenced, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(E) The certificate issued by paragraph (A) above to Michigan Wisconsin is hereby conditioned as follows:

(1) The monthly reports being filed by Michigan Wisconsin in compliance with the Commission's order in Docket No. CP63–230 issued November 12, 1963, be continued for the contract year commencing September 1, 1964.

(2) Prepaid gas, applicable to presently certificated gas supply arrangements, included in the rate base in any subsequent rate filing will not exceed the balance as of December 31, 1963, either as to volume or amount.

(F) The certificate issued to Atlantic in paragraph (B) above is not transferable and shall be effective only so long as Atlantic continues the acts or operations hereby authorized in accordance with the provisions of the Natural

Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificate issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Atlantic. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(H) Atlantic's proposed FPC Gas Rate Schedule No. 284, together with Supplement Nos. 1, 2 and 3 thereto, are hereby accepted for filing to be effective on the date of initial delivery.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–171

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 2, 1964)

On January 31, 1964, Kentucky Gas Transmission Corporation (Applicant) filed in Docket No. CP64–171 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon its Menifee Storage Field, located in Menifee, Powell and Montgomery Counties, Kentucky, all as more fully set forth in the application.

It appears that by reason of the present design of its transmission pipeline system to take full advantage of the available high pressure delivery service from its gas supplier, the continued operation of the Menifee Storage Field, above mentioned, is no longer required. The economic advantages of the storage operation which was initiated about the year 1918 have steadily declined until it is not now required for present or future operations or service. It further appears that the stored gas now in the said storage field will be withdrawn and the native gas will be produced and used to supply the Lexington Market Area in Kentucky as long as it is economically feasible. Thereafter, market requirements for the area will be met from contract demand volumes from United Fuel Gas Company, the supplier, at a cost that would result in a saving of $192,000 per annum from the cost of continuing the operation of the Menifee Storage Field.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kentucky Gas Transmission Corporation, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 10, 1956, in Docket No. G-9689 (16 FPC 437).

(2) The facilities and operation proposed to be abandoned as hereinbefore described, all as more fully described in the application, are subject to the jurisdiction of the Commission and abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment of the facilities and operation by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

The Commission orders:

Permission for and approval of the abandonment by Applicant, Kentucky Gas Transmission Corporation, of the use and operation of the Menifee Storage Field located in Menifee, Powell and Montgomery Counties, Kentucky, be and the same are hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-182

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued June 2, 1964)

On February 17, 1964, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64-182 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of existing meter facilities and the exchange of natural gas, on an equal volume basis, with Natural Gas Pipeline Company of America (Natural) during the calendar year 1964, in order to enable Applicant to sell natural gas to Cabot Corporation (Cabot), all as more fully set forth in the application.

Applicant proposes to deliver a maximum to 10,000 Mcf per day and a maximum daily average of 5,000 Mcf to Natural; the latter will redeliver gas to Cabot for the account of Applicant, all in the state of Texas. Cabot will utilize the gas in its carbon black plant in Carson County, Texas. Deliveries and receipts of gas are subject to curtailment by Applicant on a day-to-day basis as necessary to accommodate Applicant's firm obligations. The sale of gas to Cabot will be at a rate of 14.0 cents per Mcf.

Applicant will reimburse Natural an estimated $500 for Natural's cost of providing the required tap and valve on its pipeline at the delivery point to Cabot.

Applicant states that it has a supply of gas temporarily in excess of its current market requirements and that, therefore, it is continually attempting to make short-term sales pending future disposition of gas on a long-term basis. Further, Applicant states that the proposed short-term sale will assist in reducing the possibility of having to pay for gas not taken or of having to make gas supply prepayments and in minimizing possible liability under its leases.

Concurrently with the filing of the subject application, Applicant tendered for filing its Original Sheet Nos. 86, 87, 88, 89, 90 and 91 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the proposed exchange arrangement.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the operation of existing facilities and the exchange and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation of existing facilities and the proposed exchange and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) The public convenience and necessity require that the revised tariff filings of Applicant, hereinabove described, be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to operate existing facilities and to exchange and deliver natural gas during the calendar year 1964 as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The exchange and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the

Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) Applicant's Original Sheet Nos. 86, 87, 88, 89, 90 and 91 to its FPC Gas Tariff, Second Revised Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-204

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1964)

On March 16, 1964, as supplemented on March 26 and March 27, 1964, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64–204 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of two existing meter stations and the sale and delivery of up to 50,000 Mcf of natural gas per day in the Kansas Hugoton Field for a three year period to Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), all as more fully set forth in the application, as supplemented.

The proposed deliveries will be made at existing interconnections of Applicant's and Kansas-Nebraska's systems in Kearny and Finney Counties, Kansas.

Pursuant to an agreement, dated February 26, 1964, between Applicant and Kansas-Nebraska natural gas will be sold at a rate of 12.5 cents per Mcf. Further, Kansas-Nebraska has agreed to take or pay for a minimum volume of 20,000,000 Mcf during the three year term of the agreement. All deliveries herein proposed shall be subject to curtailment by Applicant to accommodate its other system requirements.

Applicant states that it has a supply of gas temporarily in excess of its current market requirements and that, therefore, it is continually attempting to make short-term sales pending future disposition of gas on a long-term basis. Applicant further states that the proposed short-term sale will assist in reducing the possibility of having to pay for gas not taken or of having to make gas supply prepayments and in minimizing possible liability under its leases.

By letter, dated April 10, 1964, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transporta-

tion and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the operation thereof and such transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation of the existing facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to operate existing facilities and to sell and deliver natural gas as hereinbefore described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

OPINION NO. 430

UNITED FUEL GAS COMPANY, DOCKET NO. G-20270; ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-20272

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER, DETERMINING JUST AND REASONABLE RATES, AND PROVIDING FOR REFUNDS

(Issued June 2, 1964)

*Syllabus**

1. Under *Seaboard* fixed costs and expenses are normally assigned 50-percent to demand and 50-percent to commodity; variable costs are normally assigned 100-percent to commodity. P. 1346.
2. Rates with moderately higher demand charges and lower commodity charges would be more realistic than rates reflecting *Seaboard* allocation and are justified by a preponderance of the evidence. P. 1347.
3. Record here reveals that use of *Seaboard* for rate design has serious infirmities; primarily because of its artificial assignment of 50-percent of all fixed costs to demand component of two-part rates. Such assign-

---

*Initial decision appears on P. 1363. Rehearing and stay granted July 20, 1964, 32 FPC 224; modified by Opinion No. 430-A, 32 FPC 1106.

ment rarely reflects accurate utilization of system by various classes of service; and since various mitigating circumstances appear in almost every case, it is generally necessary to adjust direct *Seaboard* rates to get workable results. P. 1347.

4. **It is shortsighted to assume that an allocation method, derived on basis of judgment of by-gone facts, modified from time to time to meet current exigencies, must forever remain immutable despite changes in the industry. P. 1347.**
5. **Mitigating circumstances here justify rates which recover a larger portion of their overall costs through demand component of the rate—principal one, in case of Atlantic Seaboard, is desirability of retaining and increasing interruptible industrial sales. P. 1348.**
6. **Interruptible sales help maintain high system load factors by balancing system demands and enabling more efficient utilization of facilities. P. 1348.**
7. **Principal mitigating circumstance justifying deviation to demand in United Fuel's rates is desirability of encouraging continued operation and development of costly storage, and peak shaving facilities. P. 1349.**
8. **Where 50-percent of fixed costs are included in commodity component of rate of company selling gas at less than 100-percent load factor, high load factor customer is assessed a disproportionate share of cost of unused capacity created by low load factor customer. P. 1349.**
9. **For Respondents and their customers to meet increased peak requirements without reductions in system load factors and resultant increased unit costs, they must increase interruptible industrial sales, or storage operations, or both—rates prescribed here promote these objectives more effectively than rates directly reflecting *Seaboard* unit costs. P. 1350.**
10. **To improve load factors and balance anticipated growth of residential and space-heating loads, commodity levels should permit distributing companies to offer rates that will induce continuing increase in interruptible sales—direct translation of *Seaboard* unit costs into rates would not hold out sufficient inducement in this regard. PP. 1350, 1351.**
11. **Correctly stated, low-load factor operations make storage *necessary*, not possible—because of low-load factor operations companies undertake storage at very substantial costs, operation thereof reduces costs below what they would be if additional pipeline capacity equivalent to peak requirements were constructed. P. 1351.**
12. **Management has function initially to fix and maintain proper depreciation accrual rates; such rates are based on facts and experience peculiar to each company and in deciding propriety thereof managerial judgment is entitled to great weight. P. 1353.**
13. **Under Section 9(a) of the Gas Act, Commission has obligation to approve or disapprove such depreciation rates. P. 1353.**
14. **On facts here, United Fuel was conservative when it increased its depreciation rates for underground storage and transmission, thus current depreciation rates are reasonable. P. 1353.**
15. **Commission *approves* BTU adjustment giving recognition to fact that occasionally during summer months heat content is less than during winter months which are used for establishing demand responsibility. P. 1354.**
16. **Presently, if heat content of gas in month is lower than in one during which a customer's billing demand is determined, such customer could not possibly receive all heat units for which it is paying. P. 1354.**

17. Citing relevant authorities, Commission *rejects* INGAA contention that coal interests be barred from intervention in pipeline rate cases. P. 1356.
18. There is no merit to contention that a rate filing cannot injure coal interests and that such injury if any, stems from precedent certificate proceeding—reduction in a rate can well cause new or enhanced economic injury to competitive fuels. P. 1357.
19. In future proceedings, persons claiming right to intervene because of competitive status must allege facts in pleading of such sufficiency, if true, to indicate nature of injury—where validity of such showing is appropriately challenged, Commission reserves right to set matter of injury for hearing prior to authorizing intervention. P. 1357.
20. Commission *concludes* that in developing Respondents' rates, refunds and rate reductions from suppliers made prior to date of issuance of instant opinion, should be reflected exclusively in demand component of such rates. P. 1358.
21. In proceeding arising under Section 4, of the Natural Gas Act, Commission *determines* just and reasonable rates and provides for refunds. Commissioner Ross *dissenting in part.*

C. E. Goodwin, Herbert W. Bryan, Tilford A. Jones, Richard A. Rosan, and *Giles D. H. Snyder* for United Fuel Gas Company and Atlantic Seaboard Corporation.

Walter E. Beckjord and *Richard H. Rhein* for The Cincinnati Gas & Electric Company and The Union Light, Heat and Power Company.

William Anderson, Edward B. Calland, Wallace R. Barnes, and *William C. Hart* for The Manufacturers Light & Heat Company and Cumberland Allegheny Gas Company.

Julian De Bruyn Kops and *William E. Herron* for The Dayton Power and Light Company.

James A. Biddison, Jr. for Baltimore Gas and Electric Company.

James J. Ryan and *Robert J. White* for The City of Cincinnati.

J. David Mann, Jr., William W. Ross, and *Frederick Moring* for United Gas Improvement Company.

Michael E. Shea and *Phebe Eppes Gordon* for Lynchburg Gas Company.

Oscar Berry, Karl Michelet, Reuben Goldberg, and *George Spiegel* for Washington Gas Light Company and Shenandoah Gas Company.

Robert L. Stewart for Public Service Commission of West Virginia.

Jerome J. McGrath, John A. McGrath, Robert E. Lee Hall, and *Welly K. Hopkins* for Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America.

W. F. Laird and *Ralph N. Mahaffey* for The Ohio Fuel Gas Company.

James O. Watts, Jr. and *Stanley M. Morley* for Commonwealth Natural Gas Corporation.

C. Howard Johnson for The City of Columbus, Ohio.

Paul E. Summers, Jr. for The City of Charlottesville.

Chester H. Gray, Andrew C. Conlyn, and *George F. Donella* for Public Utilities Commission of the District of Columbia.

W. A. Dickinson for Roanoke Gas Company.

Joseph I. Lewis, Alan R. Squires, and *Herbert E. Squires* for Pennsylvania Public Utility Commission.

John T. Miller for Independent Natural Gas Association of America (*amicus curiae*).

Edwin M. Miller, Alan J. Roth, and *William I. Harkaway* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

O'CONNOR, *Commissioner*:

These are pipeline rate cases arising under Section 4 of the Natural Gas Act (Act), upon applications for proposed increased rates filed by United Fuel Gas Company (United Fuel) and Atlantic Seaboard Corporation (Atlantic Seaboard), referred to collectively as Respondents. The cases are before us on exceptions by Respondents and others[1] to the Presiding Examiner's decision issued June 19, 1963, and after oral argument before the Commission on December 19, 1963.

The principal issue presently before us is common to both dockets and concerns the level of the demand and commodity components of the Respondents' rates, *i. e.*, the rate design.[2] A concomitant issue relates to the manner in which Respondents are to reduce rates and make refunds to reflect rate reductions and refunds from their respective suppliers. Other questions requiring disposition are applicable to the Respondents individually, and pertain to the heat content adjustment provision to the demand charge contained in Atlantic Seaboard's tariff, the depreciation rates to be applied by United Fuel to its underground storage and transmission properties and to its Kenova Extraction plant, and certain reserved tax issues.

Prior to the hearing on the above issues the parties stipulated to Respondents' costs of service and certain other matters, and these settlements have been approved by Commission orders issued on December 29, 1961 (26 FPC 945), February 19, 1962 (27 FPC 369) and March 20, 1962 (27 FPC 538). The settlements provide two approved costs of service for each Respondent as a basis for designing their rates: one cost of service for rates from April 5, 1960 to May 1, 1961, and another for rates from and after May 1, 1961.[3] United Fuel and Atlantic Seaboard are both subsidiaries of the Columbia Gas System. United Fuel sells gas for resale to Atlantic Seaboard and eight other wholesalers, including principally Manufacturers Light & Heat Company (Manufacturers) and The Ohio Fuel Company (Ohio Fuel). United Fuel purchases a substantial portion of its gas from Tennessee Gas Transmission Company and producers in Louisiana, and serves an area covering the central Appalachian area extending from Kentucky and Ohio to the Hudson River Valley in New York. United Fuel also makes some retail sales in West Virginia and one direct industrial sale in Ohio.

---

[1] Exceptions were filed on July 24, 1963, by Staff, jointly by Respondents, jointly by Manufacturers Light & Heat Company and Cumberland and Allegheny Gas Company, and severally by The Ohio Fuel Gas Company, Baltimore Gas and Electric Company, Commonwealth Natural Gas Corporation, The Dayton Power and Light Company, Lynchburg Gas Company, Washington Gas Light Company, United Gas Improvement Company and Fuels Research Council, Inc., *et al.* (Coal Interveners). Replies to exceptions were also filed by various parties.

[2] United Fuel's rates include a CDS-1 (Contract Demand Service) rate, AOS-1 (Authorized Overrun Service) rate, SGS-1, (Small General Service) rate, and ES-1 (Emergency Service) rate, as contained in United Fuel's FPC Gas Tariff, Fifth Revised Volume No. 1. Atlantic Seaboard's rates include a CDS-1 (Contract Demand Service) rate, CDS-2 rate (for its Zone 2) and also CDS-PR-1 and 2 (Contract Demand Service-Pipeline 2 rate (for its Zone 2) and also CDS-PR-1 and 2 (Contract Demand Service-Pipeline) rates, AOS-1 and 2 rates, and IS-1 and 2 (Interruptible Service) rates, as contained in Atlantic Seaboard's FPC Gas Tariff, Seventh Revised Volume No. 1.

[3] As hereinafter set out, these costs of service will require modification to reflect the transfer of certain facilities from Atlantic Seaboard to United Fuel, reductions in rates and refunds by United Fuel's suppliers, and reductions in rates and refunds by United Fuel to Atlantic Seaboard.

Atlantic Seaboard, which purchases most of its gas from United Fuel, makes only jurisdictional wholesale sales to eleven distributing company customers serving Washington, D.C., Baltimore, and other cities in Maryland and Virginia and vicinity. Atlantic Seaboard's largest customer is Washington Gas Light Company (Washington Gas), which serves the Washington metropolitan area.

Both United Fuel and Atlantic Seaboard make most of their sales of gas under their two-part, contract demand (CDS) rates. They have system sales load factors of approximately 65 percent and 55 percent, respectively. Their principal customers have substantially different billing demand load factors, ranging from nearly 100 percent for Manufacturers and Ohio Fuel, to about 44 percent for Washington Gas. The very favorable load factors of Manufacturers and Ohio Fuel result from their extensive storage operations, as well as their interruptible industrial sales. However, these industrial sales do not include large boiler fuel sales because of a limitation in the tariff on such sales.

On the principal issue of rate design, Respondents, and most of their major customers contend that we should not directly translate into rates the unit demand and commodity components resulting from the application of the *Seaboard* method of cost classification-allocation. Under the *Seaboard* method, fixed costs and expenses are normally assigned 50 percent to demand and 50 percent to commodity and variable costs are normally assigned 100 percent to commodity. Certain other costs are classified in proportion to the classification to demand and commodity of the fixed and variable costs, and purchased gas costs are normally classified as billed. They recommend rates for United Fuel which, when compared to those resulting from *Seaboard*, would recover by the demand charge some 11.4 percent more costs, and for Atlantic Seaboard, demand charges which would recover almost 22.5 percent more costs. The amounts recovered in the commodity charges would be correspondingly reduced.

Of all Respondents' customers, only Washington Gas[4] a customer of Atlantic Seaboard, recommends the direct translation into rates of *Seaboard* unit costs. Since Washington Gas operates at a considerably lower load factor than its pipeline supplier, and since it has little interruptible industrial market potential and no underground storage, it prefers the relatively low demand charges and high commodity charges that would result from the direct translation of *Seaboard* unit costs into rates. The Coal interveners also recommend the same rate levels since their competitive position is favored by a relatively high commodity charge. The Commission's Staff recommends rates for Atlantic Seaboard that would recover by the demand charge some 13.48 percent more costs than would be recovered under the *Seaboard* method, and rates for United Fuel that would reflect a direct translation of *Seaboard* unit costs.

The *Examiner* held that rates for Respondents with moderately higher levels of demand charges, and correspondingly lower commodity charges, than would result from the direct translation into rates of *Seaboard* unit costs are supported by all the circumstances, including a preponderance of the evidence respecting the economic and operating factors involved. The Examiner's rates for *Atlantic*

---

[4] The City of Charlottesville also took Washington Gas' position at the hearing but has filed no exceptions to the Examiner's decision.

Seaboard would recover *13.48* percent more demand costs than would rates reflecting *Seaboard* unit costs (following Staff's recommendation), while his rates for *United Fuel* would recover *4.78* percent more costs by the demand charge.

We conclude with the Examiner that rates with moderately higher demand charges and lower commodity charges would be more realistic than rates reflecting *Seaboard* allocations, and are justified by a preponderance of the evidence. In our judgment, CDS rates for Atlantic Seaboard with commodity charges patterned after those of the Examiner are reasonable and should be adopted; and in the case of United Fuel, a CDS rate with a commodity charge patterned after that of the Company is reasonable and should be adopted.[5] Inasmuch as the rationale for our decision as well as the rates we establish do not precisely coincide with the Examiner's, we will indicate our divergence and answer, where necessary, objections of the various parties.

The Examiner thought that although for rate design purposes, the *Seaboard* method often had been departed from, it was proper to apply it here for the preliminary purpose of deriving tentative rates. However, he held that here "mitigating circumstances"[6] exist which justify the recovery of more costs through the demand component than would rates reflecting a literal translation of *Seaboard* classified costs. The most weighty circumstance was the importance of retaining marginal interruptible sales that might be lost to competing fuels, and of encouraging additional sales which would benefit all of Respondent's customers. Other circumstances were: the desirability of not burdening high load factor customers with an unfair portion of fixed costs associated with unused capacity; the desirability of protecting Respondents from low commodity rate competitors; and the fact that Atlantic Seaboard's rates have always recovered more by the demand charge than would straight *Seaboard* rates.

This record, as well as our previous experience, unmistakably reveals that use of *Seaboard* for rate design has serious infirmities. The primary infirmity results from its artificial assignment of 50 percent of all fixed costs to the demand component of two-part rates. This assignment rarely reflects with accuracy utilization of the system by the various classes of service, and, inasmuch as mitigating circumstances of considerable variety appear in almost every case, it is generally necessary to adjust direct *Seaboard* rates to get workable results. This adjustment has at times been up to 100 percent.[7]

It is short-sighted to assume that an allocation method, derived on the basis of judgment of by-gone facts, and modified from time to time to meet current exigencies, must forever remain immutable despite the changes that have occurred in this dynamic industry. We recognize that a judgment factor will always have to be applied in the final design of rates. That judgment, however, should be applied within a classification and allocation formula that insures its exercise with reasonable certainty, and should give recognition to known industry changes.[8] The Commission Staff has introduced in two recent proceedings, not yet before the Commission, alternative methods of rate design, which not only seek to overcome the *Seaboard* infirmities, but also to reflect these changes.[9] However, we must caution those who have a strong interest in rate design, not to delegate the responsibility to devise and propose a new method to the Commission Staff, but that they, as well, propose alternative methods and introduce adequate factual support.

---

[5] We shall require Respondents to file specific rates as set forth hereinafter, reflecting the adjustments necessary to Respondents' costs of service referred to at the outset of this opinion.

[6] In the language of the *Atlantic Seaboard* Opinion, 11 FPC at 62.

[7] In the *United Fuel* decision in 12 FPC 351 (1953), for example, we approved rates that deviated to demand by about 100 percent. A large deviation to demand was also approved in *Midwestern Gas Transmission Company,* 21 FPC 658 (1959), and other extreme instances can be cited.

Respondents and interveners propose new or modified methods for fixing the levels of Respondents' rates, but such methods are unfortunately subject to the same infirmities as the Seaboard method. Respondents' method starts by classifying alleged fixed costs to demand and alleged variable costs to commodity but there is no built-in assurance that interruptible customers who pay only the commodity charge will make a substantial contribution to the fixed charges for the investment required to deliver gas to them. Additionally, as Respondents make clear, their method involves the consideration of numerous economic and other factors. Similarly, the method proposed by the intervener Manufacturers involves judgment on the basis of variable costs with the remainder of the costs being assigned to the demand charge, and giving particular attention to protecting the company from instability or erosion of earnings. Here too, however, the assignment of costs to the particular services involved is not accomplished on a satisfactory basis, for consideration of the many complex and uncertain factors referred to would virtually preclude the exercise of judgment on a reasonably predictable basis. We shall, therefore, for lack of an acceptable alternative on this record use the *Seaboard* method as a point of departure here while we continue the search for a better method.

We conclude that mitigating circumstances in this case justify rates for Respondents which recover a larger portion of their overall costs through the demand component of the rate. The principal such mitigating circumstance in the case of Atlantic Seaboard[10] is the desirability of retaining and increasing interruptible industrial sales.

Such sales help maintain high system load factors by balancing system demands and enabling more efficient utilization of facilities, thereby lowering unit gas costs. The CDS rates we approve for Atlantic Seaboard will aid its distributing company customers to retain and increase such sales.[11] Moreover, the evidence introduced by Baltimore Gas, Commonwealth Natural Gas Corporation, Lynchburg Gas Company, Roanoke Gas Company, United Gas Improvement Company[12], and Staff indicates that the benefits to Respondents and their customers will, in the long term, offset the increased costs sustained by Washington Gas, Atlantic Seaboard's principal low load factor customer, and virtually the only one advocating straight *Seaboard* rates.

---

[8] Respondents' evidence shows in some detail the changes in the natural-gas industry that have made the *Seaboard* formula ill-adapted for present conditions. For example, their evidence shows that the price of fuel oil has not increased appreciably between 1952 and 1962 (No. 2 fuel oil in Baltimore rising from 9.20 to 10.64 cents per gallon). In contrast, Atlantic Seaboard's annual reports show that city-gate prices for sales by Atlantic Seaboard to Baltimore Gas have increased approximately 50 percent in the same interval. Also in this general interval, residential space heating sales of gas have about doubled and are still increasing. Other circumstances not important when *Seaboard* was decided but crucial here are discussed herein below.

[9] *Chicago District Pipeline Co.*, Docket No. RP64–5; *Cities Service Gas Co.*, Docket No. RP64–9.

[10] This circumstance is not so important in the case of United Fuel, since the commodity charges recommended for it by all the parties would be lower than those in its presently filed rates, which have been in effect for several years.

[11] The record shows that Atlantic Seaboard's customers have lost interruptible loads to competing fuels in the recent past.

The principal mitigating circumstance justifying a deviation to demand in United Fuel's rates is the desirability of encouraging its continued operation and development of costly storage, and, to a less extent, peak shaving facilities.[13] As we have often pointed out, storage facilities, whether they belong to the pipeline company or the customer company, are desirable because they increase the company's operational load factor and reduce its unit costs of gas, thereby reducing the total charges to all customers and consumers served. While storage facilities are expensive, they eliminate the need for *more* expensive transmission capacity and gas purchases to meet peak demands, and permit the utilization of existing capacity during off-peak periods when it would otherwise be idle. These facilities have become increasingly significant in recent years in offsetting the effect of rising space-heating sales, inherently low-load factor. Although the extent of the benefits vary, all customers receive some benefit from the installed storage facilities of a fellow customer, as well as from those installed by the pipeline. The design of rates must recognize the benefits and origin of storage facilities, and not penalize a customer for having improved its load at considerable expense.

It becomes obvious in the design of rates that when 50% of fixed costs are included in the commodity component of a rate of a company selling gas at less than 100% load factor, the high load factor customer is assessed a disproportionate share of the cost of unused capacity created by the low load factor customer. This fact is amply demonstrated by the Examiner, *infra*, p. 1372 of his Decision where he shows for the test period that such high load factor customers as Lynchburg, Ohio Fuel and Manufacturers bore volumetric responsibilities in excess of their demand or capacity responsibilities of from 23.2% to over 60%. Conversely, such low load factor customers as Washington Gas and Kentucky Gas have volumetric responsibilities of 20 to 30% *below* their demand or capacity responsibilities.

It is clear from the foregoing that the Examiner gave insufficient weight to the above considerations as grounds for departing from rates based on *Seaboard* unit costs. The Examiner found that the development of high load factor sales through the use of peak shaving and storage is generally desirable, but that because of insufficient evidence respecting the specific economics of peak-shaving by the distributing companies, no finding could be made that a higher demand charge would be beneficial in this regard. He also thought that an examination into the economics of storage by Ohio Fuel and Manufacturers was unnecessary in this case. We do not think a more detailed showing, or examination into these matters, is necessary in order for us to make such a finding. The conclusions we reach above, apart from the evidence of record which sustains them, are firmly grounded on fundamentals of principle and policy.

---

[12] For example, Baltimore Gas predicted it would lose seven of its present fifteen interruptible customers to oil, or a loss of estimated sales of 1,750,000 Mcf in 1962, with even larger future losses, if there were any price increase resulting from an increase in Atlantic Seaboard's commodity charge. Any such increase would jeopardize a large prospective sale to the Bethlehem Steel Company for blast furnace use of approximately 8,800,000 Mcf in 1964, a sale which would increase Baltimore Gas' requirements by some 30 percent, and its city gate load factor by some 12 percent, over those otherwise expected.

[13] United Fuel currently operates 16 underground storage pools representing an investment of some $51,700,000. Atlantic Seaboard owns and operates two underground storage pools (only one in operation during the test period), with a third under development. The recorded cost of Atlantic Seaboard's underground storage (including stored gas) was stated to be $18,700,000. Ohio Fuel's underground storage plant has an estimated net original cost of some $60,134,000, with a corresponding cost of service of some $13,273,000. Manufacturers has invested over $52,000,000, including current gas stored, in underground storage. Extensive peak-shaving has been developed by many of Respondents' customers also.

A mitigating circumstance affecting both Atlantic Seaboard and United Fuel, related to the need for interruptible sales as well as underground storage, is that Respondents' future load growth will probably take place largely in the residential space-heating market. The record indicates that Respondents' space-heating requirements have nearly doubled since 1952, when *Seaboard* was decided.[14] Deliveries for space-heating are made at a relatively low load factor, the incremental load factor of residential space heating for Manufacturers, for example, being only 25 percent. In order for Respondents and their customers to meet such increased peak requirements without reductions in system load factors and consequent increases in unit costs, they must increase their interruptible industrial sales, or their storage operations, or both. The rates we prescribe will unquestionably promote these objectives more effectively than would rates which directly reflect *Seaboard* unit costs.[15]

Several arguments of Washington Gas and the Coal Interveners respecting the above matters not specifically discussed above can be dealt with briefly.

Washington Gas and the Coal Interveners contend that there is no substantial evidence showing that high demand-low commodity rates are required to retain and increase interruptible industrial sales. Washington Gas argues that it was not shown that the distributing companies would lose any customers under rates directly reflecting *Seaboard* unit costs, but that the evidence, which the Examiner himself called "defective," consists only of inconclusive generalities that there is "every likelihood of a loss" or a "strong probability" of a loss. Also the Coal Interveners argue that the procedure by which the specific rates are arrived at is not defined and thus no relationship was shown between the evidence presented and the rates approved; and that actually the controlling factor is the comparative costs of competitive fuels, a determination which essentially is left to the discretion of management.

In our view, the evidence on this point indicating a strong probability of losses is sufficient. As the record shows, some customers are receiving marginal benefits from Respondents' rates and it would be imprudent to withhold relief until injury results. It cannot be seriously questioned that the recoupment of a more realistic portion of overall costs by the demand and commodity charges we approve will help retain present sales.

Moreover, we do not base our conclusions solely on threatened *losses* of interruptible sales. There is also need that the commodity levels set by us shall permit distributing companies to offer rates that will induce a continuing increase in interruptible sales, in order to improve load factors and balance the anticipated growth of residential and space-heating loads.[16] In our judgment, the direct translation of *Seaboard* unit costs into rates will not hold out a sufficient inducement in this regard.

---

[14] Illustrative of this increase is the increase in the contract demand of Washington Gas with Atlantic Seaboard, from 165,271 Mcf in 1952 to 397,000 Mcf currently.

[15] The growing importance of interruptible industrial sales, of underground storage, and of residential space-heating sales, as well as the increase in purchased gas costs are among the significant changes that have taken place in the natural-gas industry since the *Seaboard decision* in 1952, and which make questionable the desirability of future adherence to direct translation of *Seaboard* unit costs into rates.

Washington Gas and the Coal Interveners argue further that the evidence does not show, as our *Southern Natural* and *El Paso* decisions require,[17] that the benefits from increased interruptible industrial sales will outweigh the detriments to the residential consumers resulting therefrom, but shows, on the contrary, that the benefits from the Examiner's rates are exceeded by the resulting increases in costs to Washington Gas. Thus, they conclude that any deviation from straight *Atlantic Seaboard* rates is legally impermissible.

Washington Gas' argument is invalid. As we said in *Atlantic Seaboard*, rates derived by the formula enunciated therein would be adjusted in the presence of "mitigating circumstances", which we have found to exist here. Neither the *Southern Natural* opinion nor the *El Paso* opinion, decided subsequently, stand for the proposition that adjustments would be ordered *only* upon a specific showing that costs to firm customers would be greater if current industrial sales were lost than if the demand component were immediately increased. In *Southern Natural*, the firm customer cost factor was carefully described as a "consideration" and not, as Washington Gas would have it, as the sole determinative factor. Moreover, the weight of this consideration necessarily diminishes where, as is here the case, the deviation from straight *Seaboard* rates is minimal.

Washington Gas also contends that storage considerations do not justify any departure from rates based on *Seaboard* unit costs. It argues that capacity and gas for the storage operations of Respondents and their high-load factor customers Ohio Fuel and Manufacturers is available only as the result of the operations of low-load factor customers such as Washington Gas. Accordingly, it argues that Washington Gas deserves a "reward" for making possible storage operations that benefit other high-load factor customers, rather than a "penalty" in the form of high demand-low commodity rates which will shift such costs to the low-load factor customers.

Washington Gas has misconceived the correct relationship of storage and low-load factor operations. Correctly stated, low-load factor operations make storage *necessary*, not possible. It is because of low-load factor operations that companies undertake storage at very substantial costs. The operation of storage facilities reduce the costs below what they would be if additional pipeline capacity equivalent to peak requirements were constructed.

Further, Washington Gas contends that benefits resulting from improved load factors, interruptible industrial sales and storage do not support the lower commodity charges in Respondents' rates, because additional interruptible sales and storage would necessitate purchasing additional firm gas, increasing the capacity of Columbia Gulf Transmission Company (the pipeline subsidiary that delivers gas from the fields of Louisiana to United Fuel), and increasing the capacity of United Fuel's system downstream from storage. Washington Gas says that the result would be an increase in the investment and operating costs which would outweigh the benefits of the improvement in sales load factors.

---

[16] Although Atlantic Seaboard's system load factor increased from 51 percent in 1952 to 54 percent in 1960, we believe that a greater inducement to increased efficiency is needed. This is also true of United Fuel, with its 65 percent load factor, particularly in view of the limitation in its tariff on boiler fuel sales.

[17] *Southern Natural Gas Company*, 29 FPC 323, and *El Paso Natural Gas Company*, 22 FPC 659.

The argument is fallacious. It erroneously assumes a future static, rather than a dynamic, sales pattern when, in fact, residential and space-heating sales have increased in the past and will continue to increase in the future, thereby necessitating increases in capacity and firm gas purchases in any event. Thus, the increased interruptible sales that may result from the rates we approve will not cause but will accompany normally predictable expansion.

Transfer of Boldman Compressor Station and Other Facilities to United Fuel.—As mentioned at the outset of this opinion, our orders approving the settlement of Respondents' cost of service provided that United Fuel's cost of service would reflect the transfer to it from Atlantic Seaboard of the Boldman Compressor Station, with Atlantic Seaboard being obligated to make appropriate refunds reflecting such transfer.[18] The Boldman Compressor Station, and certain other facilities consisting principally of a portion of Atlantic Seaboard's KA–20 line, were the subject of a certificate proceeding in Docket No. CP61–107, involving Atlantic Seaboard's request to transfer such facilities to United Fuel. This request, and certain related authorizations, were granted by Commission Op. No. 377.[19] On September 17, 1963, the Securities and Exchange Commission authorized the transfer of these facilities and related transactions, which were consummated effective as of the close of business September 30, 1963. Thus, we conclude that Respondents costs of service should reflect the transfer of the Boldman facilities to United Fuel effective as of April 5, 1960, and the transfer of the remainder of the facilities effective as of October 1, 1963.

Depreciation Accrual Rates on United Fuel's Facilities.—Our order conditionally approving the settlement of United Fuel's cost of service,[20] reserved for hearing the question of the proper depreciation accrual rates to be applied to United Fuel's Kenova Extraction Plant, its underground storage facilities and its transmission properties. The settlement reflects United Fuel's test year depreciation accrual rates of 6.67 percent on the Kenova facilities, and various depreciation rates on the different classes of property comprising the underground storage and transmission facilities. The latter rates represent increases over the rates applied prior to July 1, 1957.

Staff initially urged a 3 percent depreciation rate for the Kenova plant, and raised no objection to the percentage rates presently booked for the remaining facilities. After reviewing United Fuel's evidence, however, staff withdrew its opposition to the 6.67 percent Kenova rate. Staff presented no evidence on the issue of depreciation rates, and, inasmuch as cost of service represents a settlement and not a full evidentiary determination, asserts that we need make no findings.

The Examiner held that the increased depreciation accrual rates were just and reasonable. He reasoned that changes in these rates are primarily matters of managerial judgment, to be exercised to maintain adequate reserves, and concluded that the absence of any reference to the changed rates in the Commission order of March 20, 1962 was significant. He specifically rejected the contention that under Section 9(a) of the Natural Gas Act[21] only Commission prescribed rates of depreciation may be included in costs of service.

---

[18] The transfer of the facilities reduces Atlantic Seaboard's cost of service and rates and increases those of United Fuel.

[19] 29 FPC 90 (1963).

[20] 27 FPC 538 (1962).

[21] Section 9(a) provides in part that "The Commission may . . . determine . . . proper . . . rates of depreciation" and "no natural-gas company . . . shall charge . . . any depreciation . . . charges other than those prescribed by the Commission."

We agree with the Examiner that management has the function initially to fix and maintain proper depreciation accrual rates. These rates are based on facts and experience peculiar to each company, and thus in deciding their propriety managerial judgment is entitled to great weight. Particularly is this so where, as here, the facts were essentially unchallenged by any party, and the Company's position was unopposed by Staff. It is equally clear that under Section 9(a) we have the obligation to approve those rates and thus the power to overrule managerial decisions. On the present record, however, we find no justification for overturning what the evidence indicates was a reasonable decision.

This evidence substantially supports the rates currently being booked by United Fuel. As to the 6.67 percent annual depreciation rate applied to the Kenova Extraction Plant, the evidence shows that that rate is based upon the estimated 15-year economic life of the plant, and amortizes over such period only the initial investment, without reference to any additions to replacements which must inevitably occur. The evidence further shows that the gas reserves available for the Kenova operation (local Kentucky sources) are estimated to be sufficient for only fifteen years. Clearly, therefore, the annual rate of 6.67 percent on the Kenova facilities, reflecting 1/15th of their total cost, is not excessive. As to the depreciation accrual rates applicable to the underground storage and transmission properties, United Fuel has discovered from experience that its rates were simply not large enough to maintain adequate reserves to cover present and future charges against the various property accounts involved. To cite but one of the facts underlying that judgment, continuing increases in labor costs have increased the cost of retiring or removing property. We are satisfied by our consideration of the facts that the company was quite conservative when it increased its depreciation rates for underground storage and transmission, and that the current depreciation rates are reasonable.

Accordingly, the depreciation accrual rates we prescribe in this proceeding are those which United Fuel is booking and which underlie the settlement in this proceeding.

Continued Inclusion in Atlantic Seaboard's Tariff of Heat Content Adjustment Provision.—Our order conditionally approving the settlement of Atlantic Seaboard's cost of service[22] reserved for hearing the further issue of the propriety of the continued inclusion in Atlantic Seaboard's Rate Schedules CDS-1, CDS-2, CDS-PR-1 and CDS-PR-2 of a Btu content adjustment provision insofar as it relates to the demand charge. This provision provides for increases or decreases in the demand charge to reflect variations in the heat content of the gas from 1,000 Btu per cubic foot.[23] It was originally included in Atlantic Seaboard's tariff pursuant to our Op. No. 225[24] to avoid possible discrimination from variations in the Btu content of gas delivered to customers from one or the other of the two main lines (20 and 26 inches) on Atlantic Seaboard's system.

At the hearing Roanoke Gas Company and Lynchburg Gas sought the elimination of the Btu adjustment provision applicable to the demand charge, contending that it results in operating difficulties and unjustified differences in rates between localities. Staff recommended that the demand charge Btu adjustment provision be modified in order to recognize that there are occasions in the summer months when the heat content is less than in winter months when demand responsibility is established.

---

[22] 26 FPC 945 (1961).

[23] Atlantic Seaboard's tariff also contains a Btu adjustment provision applicable to the commodity charges of the CDS and CDS-PR rates.

[24] 11 FPC 43, 60 (1952).

The Examiner held that Atlantic Seaboard's Btu adjustment provisions should be retained in its tariff, and that Staff's proposed modification of the demand charge provision should be rejected. He thought that there are still differences in the Btu content of the gas transported through Atlantic Seaboard's two main lines and therefore still good reason to continue the provisions in order to equalize the rates; that by virtue of the provisions, each of the customers pays the same price per therm; and last, that the provisions were agreed to by all parties to the earlier settlement.

Only Lynchburg Gas excepts. First, it contends that the provisions are no longer justified because they were originally approved at the insistence of one of Seaboard's customers which purchased gas on an Mcf basis and sold to the public on a now outmoded thermal basis. Second, it contends that the provisions cause operating difficulties. Third, it argues that the provisions are discriminatory, since they require customers like Lynchburg Gas, receiving relatively high Btu gas, to pay a considerably higher charge per Mcf than the customers which take larger volumes of lower Btu gas. It says that there is no practical relationship between the customers' demands and the heating value of the gas delivered, since variations in Btu may occur during off-peak periods. Accordingly, Lynchburg Gas asks that the Btu adjustment provision applicable to the demand charge be eliminated, leaving only the provision applicable to the commodity component. This would permit it to pay through the demand charge for the particular pipeline capacity it receives from Atlantic Seaboard, and to pay through an adjustment to the commodity charge for the premium attached to high Btu gas. In the alternative Lynchburg Gas endorses Staff's modification of the demand charge provision.

We conclude that the Examiner's decision should be modified on this issue by the adoption of Staff's proposal. Staff would attach a proviso to the language of the present Btu adjustment provision applicable to the demand charge so that that provision would then read as follows (Staff's proposed proviso italicized):

> The demand charge shall be increased or decreased in proportion to the amount by which the average total heating value of the gas delivered in the month in which the Billing Demand was established is greater or less than 1000 Btu per cubic foot; *provided, however, that such adjustment shall not exceed that which would result from utilization of the average total heating value of the gas delivered in the current month.*

By this means, recognition would be given to the fact that there are occasions during the summer months when the heat content is less than it is during those winter months which are used for establishing the demand responsibility. Such recognition is desirable and necessary in the interest of equal treatment, for under the present provision, if the heat content of the gas in a current month is lower than that in the month during which a particular customer's billing demand is determined, that customer could not possibly receive all of the heat units for which it is paying. This is a frequent occurrence.

Respondents opposed Staff's recommendation by testimony in the record and by brief. First, they contend that Staff's proposed modification is outside the issue of the "inclusion" of the said provision as reserved in our settlement order cited above. Second, they contend that their evidence shows that the new language would complicate Atlantic Seaboard's billing procedure, and, since the effect of the modification on any of Atlantic Seaboard's customers would be extremely minor, it would serve no useful purpose.

These objections have little real substance, in our view. The broad issue of whether to eliminate this tariff provision can reasonably be considered to embrace the more narrow issue of whether to modify it where, as here, the affected parties were afforded full opportunity to contest the issue at the hearing, and cannot be prejudiced by such a restricting of the issue. Respondents' claim of complications in billing procedures is not convincing, and what is a "minor" effort to Respondents may be of substantial importance to a customer.

Accelerated depreciation, statutory depletion and well-drilling costs, and Texas Severance Beneficiary Tax.—The Examiner held that the stipulated costs of service were not dispositive of the tax treatment to be accorded accelerated depreciation under Section 167 of the Internal Revenue Code, or the tax treatment to be accorded statutory depletion and intangible productive well-drilling costs. However, he held that since the record contains no evidence on these issues, he could make no findings with respect thereto.

The Respondents except, contending that these matters are no longer issues in the case. They admit that the settlement agreements are not dispositive of the above matters. However, they contend that as to accelerated depreciation, Article V of the settlement agreements provides that if the United States Court of Appeals for the Fourth Circuit in Case No. 8101,[28] held that the Commission's order there under review with respect to tax treatment of accelerated depreciation is erroneous, further proceedings may be had to determine the ultimate disposition of the amounts included in the jurisdictional costs of service for this item. They say the court upheld the Commission's order and dismissed the petition for review, thus disposing of the accelerated depreciation tax issue reserved in this case, and that since this item is properly being included in Respondents' costs of service, no further action is required with respect thereto.

As to statutory depletion and intangible productive well-drilling costs, Respondents say that it was agreed by all parties to the United Fuel settlement, as set forth in Article V thereof, that if the treatment accorded these tax deductions should prove inconsistent with the ultimate determination of the issues by the United States Court of Appeals for the Fourth Circuit in Case No. 8106,[29] the stipulated cost of service would be adjusted consistent with the court's decision. Respondents say further that in our settlement order of March 20, 1962, respecting United Fuel, we provided that in accordance with the aforesaid court opinion, the total costs in the stipulated cost of service should be reduced by the elimination of Adjustment (5) this being the effect on the stipulated cost of service of the tax treatment accorded therein to statutory depletion and intangible productive well-drilling costs. And they contend that this elimination, amounting to $4,003,031, as shown in Exhibit 18, Schedule 1, line 10, has been made and is already reflected in the rates proposed by Respondents and those found by the examiner.

We conclude that Respondents are correct in their above contentions for the reasons they give, and Examiner's decision should be modified accordingly.

---

[28] Subsequently reported as *Cities of Lexington* v. *F.P.C.* 295 F. 2d 109 (CA4–1961).
[29] *Ibid.*

Respondents further contend that Article VI of United Fuel's settlement agreement noted that $25,490 was included covering the Texas Severance Beneficiary Tax, which was paid by United Fuel to the State of Texas under protest. They say that United Fuel ceased paying the tax on March 31, 1961, and the settlement provided that in the event United Fuel receives a refund of all or any portion of the said tax included in the stipulated cost of service, United Fuel would refund the jurisdictional portion thereof to its wholesale customers. The record shows that United Fuel has received a refund from the State of Texas with respect to this tax, and the jurisdictional portion thereof will be refunded to United Fuel's wholesale customers, together with other refunds and rate reductions received, pursuant to the terms of the settlement agreement.

This issue is disposed of by ordering clause (C), *infra*, providing that all refunds by suppliers shall be properly refunded by Respondents.

Intervention of the Coal Interests.—A question is presented concerning the intervention in rate proceedings by the Coal Interests. By Commission order issued June 21, 1962, the Coal Interests were permitted to intervene herein on the limited issue of rate design. The Independent Natural Gas Association of America (INGAA) protested such intervention and petitioned to intervene herein to oppose it, or alternatively, to participate as *amicus curiae*. By order issued August 17, 1962, we denied INGAA permission to intervene but permitted it to participate as *amicus curiae*, and to argue on brief and orally whether the Coal Interests have a legal right to intervene in rate proceedings, and whether or not their intervention in this case has in fact proved to be in the public interest. The Examiner did not discuss these questions since our order permitting INGAA to participate provided for briefs and oral argument addressed to the Commission.[27]

In its brief and oral argument, INGAA vigorously opposes the intervention of the Coal Interests on three grounds. First, it contends that the legislative history shows that Congress intended that the Coal Interests should be barred from participating in pipeline rate cases. Second, it contends that the Coal Interests' participation is not, under Section 15(a) or any other provision of the Act, a matter of Commission discretion. And third, it contends that such intervention results in delay of the regulatory scheme which Congress provided to expeditiously deal with the rates of pipeline companies.

The relevant cases clearly indicate that where an adequate showing is made that a person would be competitively injured if the Commission were to approve a proposed change in a pipeline's rates, it is entitled to intervene and participate in any hearing with respect to all matters relevant to the Commission's determination as to the appropriateness of the requested rate change. See *F.C.C.* v. *Sanders Brothers Radio Station*, 309 U.S. 470, 475–477 (1940); *Associated Industries* v. *Ickes*, 134 F. 2d 694, 705 (2d. Cir. 1943), dismissed as moot 320 U.S. 707; *Virginia Petroleum Jobbers Association* v. *F.P.C.*, 265 F. 2d 364, 368 (D.C. Cir. 1959); *Virginia Petroleum Jobbers Association* v. *F.P.C.*, 259 F. 2d 921, 926 (D.C. Cir. 1958); *City of Pittsburgh, et al.* v. *F.P.C.*, 237 F. 2d 741 (D.C. Cir. 1956); *National Coal Association* v. *F.P.C.*, 191 F. 2d 462, 466–467 (D.C. Cir. 1951). The *Sanders* case, *supra*, held that even if the competitive injury to the would-be intervener is not a factor which the agency could consider in reaching its final judgment in the proceeding, this is not a basis for rejecting intervention. See also *City of Pittsburgh* v. *Federal Power Commission, supra*, at 746. The *National Coal Association* case, *supra*, at page 467, makes clear that despite the discretionary language of Section 15 of the Natural Gas Act "any person who would be 'aggrieved' by the Commission's order, such as a competitor, is also a person who has a right to intervene." See also to this effect, the second *Virginia Petroleum Jobbers Association* case (265 F. 2d at 368). This latter case expressly rejected the argument that the Commission could deny intervention to a person who would suffer economic injury unless he could also show that he could represent the public interest and that it was necessary for him to do so. (See footnote 1 at pp. 367–368.)

---

[27] Since our above-cited order permitting INGAA to participate as *amicus curiae* in effect reserved the intervention issue for the Commission, INGAA's letter dated August 2, 1963, calling this issue to our attention, does not constitute an exception or supplemental brief, and the letter of the Coal Interests dated August 5, 1963, objecting thereto and requesting opportunity to reply is without merit and the request should be denied.

It is argued that all of the Federal Power Commission cases dealing with intervention related to certificate applications under Section 7 of the Act and that the early decision of the Tenth Circuit in *Alston Coal Co.* v. *F.P.C.*, 137 F. 2d 740, holds that the contrary is true with respect to rate proceedings like the present one. We do not so read the *Alston* case. At most it holds that the Commission had discretion to deny a petition to intervene in a Section 5(a) proceeding initiated by the Commission where intervention was sought "for the purpose of establishing the economic effect a reduction in gas rates would have upon the coal industry" (137 F. 2d at 742). We agree that the effect of a rate reduction upon the coal industry, as such, is not a relevant consideration in determining whether a proposed rate change meets the standards of Sections 4 or 5 of the Natural Gas Act and if the intervention petition here had been so limited, we would have been inclined to reject it. But the teachings of the cases cited in the preceding paragraph are that, while a competitor may not be in a position to argue his own injury as grounds for denial of a proposed revision of a pipeline's rates, this injury does give him standing to participate in any hearing which we order, and to introduce evidence or make arguments with respect to all of the factors which are relevant to our determination under Sections 4 and 5 of the Act. Certainly, there is no merit to the contention that a rate filing cannot injure the Coal Interests and that their injury, if any, stems from the precedent certificate proceeding; a reduction in a rate or a portion of the rate can well cause new or enhanced economic injury to competitive fuels.

What we have said above is predicated upon the assumption that the Coal Interests here actually would be aggrieved by the rate changes either as proposed by United Fuel and Atlantic Seaboard or as ordered herein. From what we are able to glean from the record it seems highly unlikely that this is in fact the case. We recognize, however, that we permitted the Coal Interests to intervene in this proceeding on the basis of allegations in their petition and did not require them to support these allegations on the record. We see no reason for delaying the decision here to make any such determination at this late date. However, in the future we will expect persons claiming the right to intervene because of their competitive status to allege facts in their pleadings sufficient, if true, to indicate the nature of the injury. Where the validity of such a showing is appropriately challenged, we reserve the right to set the matter of injury for hearing prior to authorizing intervention. See *Chicago District Pipeline Co.*, Docket No. RP64-5, order of December 16, 1963.

Rates and refunds.—As indicated at the outset of this opinion, rates must be fixed for both Respondents for two periods, namely, from April 5, 1960 to May 1, 1961, and from and after May 1, 1961, and refunds must be made by Respondents accordingly. We shall require both Respondents to file rates based upon their approved jurisdictional costs of service and upon our determinations in this opinion. First, however, we should decide a question deferred until now by our settlement orders (27 FPC 538, 26 FPC 945), namely in what manner shall United Fuel and Atlantic Seaboard make rate reductions and refunds resulting from rate reductions and refunds by their suppliers.[28]

Respecting this issue, the Examiner held that, following Staff's recommendation, refunds should "flow through" Respondents to their customers precisely as received from the suppliers. Under this method, refunds received by United Fuel from its suppliers would be passed on by United Fuel to its customers in the same proportions of demand and commodity charges as refunded by the suppliers. Correspondingly, United Fuel's demand and commodity charges would be reduced to reflect the reductions in its suppliers' demand and commodity charges. Generally, the same procedure would be followed as to the refunds and rate reductions Atlantic Seaboard receives from United Fuel.

Only Washington Gas excepts, contending that if *Seaboard* unit costs are not utilized in developing Respondents' rates, refunds and reductions should be computed so as to more nearly approach rates reflecting *Seaboard* unit costs. It further contends that if it is decided that a commodity charge of a particular level is required to protect existing interruptible industrial sales, it would be anomalous to permit reductions and refunds to reduce even further that commodity charge which would, it contends, be the result if refunds and reductions are handled on an "as received" basis.

We conclude that in developing Respondents' rates, refunds and rate reductions from suppliers made prior to the date of issuance of this opinion should be reflected exclusively in the demand components of Respondents' rates.[29] In designing rates for Respondents in this case, the basic problem has been to find commodity charges that will meet the prevailing economic and market requirements of Respondents and their customers, including the need of Washington Gas for a relatively low demand charge stemming from its low load factor operation and lack of interruptible industrial sales. Having arrived at commodity charges which meet these requirements, the most reasonable course is to adhere to them consistently, to the extent practicable, and make any necessary adjustments to Respondents' rates in the demand charges. Further, we think this procedure should be followed not only with respect to adjustments reflecting supplier refunds and rate reductions, but also adjustments reflecting the transfer to United Fuel of the Boldman Compressor

---

[28] United Fuel purchases gas principally from Tennessee Gas Transmission Company and certain producers in Texas and Louisiana. United Fuel pays Tennessee under a demand-commodity rate for purchased gas, and also for gas Tennessee transports for United Fuel from a Texas producer, Champlin Oil & Refining Company, from which United Fuel purchases gas. Also, United Fuel pays a cost-of-service rate to its affiliate, Columbia Gulf, for the latter's transportation of gas purchased by United Fuel from other producer-suppliers in Louisiana. United Fuel pays the producers at commodity rates.

A very substantial portion of the gas which United Fuel purchases is at rates which were made subject to refund. These rates, on which the costs of service of United Fuel in these proceedings are based, include both the demand and commodity components in Tennessee's rates and the producers' commodity rates.

Atlantic Seaboard also purchases gas from Transcontinental Gas Pipe Line Corporation.

[29] Supplier refunds and reductions made subsequent to the date of issuance of this opinion shall be reflected in Respondents' rates on an "as received" basis.

Station and other facilities discussed previously in this opinion. Our review of the resulting indicated rates satisfies us that this procedure is not subject to any material objection. It will assure the equitable distribution to Respondents' various customers of the refunds and rate reductions involved while largely satisfying Washington Gas' desire for a relatively low demand charge rate.

As to the particular rates for Respondents in this proceeding, United Fuel shall file rates acceptable to the Commission effective April 5, 1960, based upon its jurisdictional cost of service heretofore approved in this proceeding. Consistent with the foregoing determinations in this opinion, in developing the CDS–1 rate to be filed, United Fuel shall utilize its proposed commodity charge of 29.44 cents per Mcf, and shall reflect in the demand charge of the rates to be filed United Fuel's acquisition of the Boldman Compressor Station as of April 5, 1960.

United Fuel shall also file rates acceptable to the Commission effective May 1, 1961, based upon the jurisdictional cost of service heretofore approved in this proceeding. In determining the CDS–1 rate to be filed, United Fuel shall utilize its proposed commodity charge of 29.58 cents per Mcf, and shall reflect in the demand charge of the rates to be filed its previous acquisition of the Boldman Compressor Station. Further, the demand charge of the rates to be filed shall also reflect, effective as of the date received, all reductions in the rates of United Fuel's suppliers on and after May 1, 1961. Further, the demand charge of the rates to be filed shall also reflect, effective as of October 1, 1963, United Fuel's acquisition of the KA–20 pipeline facilities and the merger of Amere Gas Utilities Company into United Fuel.

Atlantic Seaboard, in turn, shall file rates acceptable to the Commission effective April 5, 1960, based upon its jurisdictional cost of service heretofore approved in this proceeding. In determining the contract-demand rates to be filed, Atlantic Seaboard shall utilize the Examiner's proposed commodity charges of 32 cents per Mcf, as set forth in his decision (corrected by his errata sheet), and shall reflect in the demand charge of the rates to be filed Atlantic Seaboard's transfer of the Boldman Compressor Station as of April 5, 1960, and also the utilization of the Btu adjustment provision applicable to the demand charge proposed by Staff and hereinabove approved.

Atlantic Seaboard shall also file rates acceptable to the Commission effective May 1, 1961, based upon the jurisdictional cost of service heretofore approved in this proceeding. In determining the contract-demand rates to be filed, Atlantic Seaboard shall utilize the Examiner's proposed commodity charge of 32.16 cents per Mcf, as set forth in his decision, and shall reflect in the demand charge of the rates to be filed its previous transfer of the Boldman Compressor Station. Further, the demand charge of the rates to be filed shall also reflect, effective as of the date received, all reductions in the rates of United Fuel on or after May 1, 1961; and shall also reflect, effective as of October 1, 1963, Atlantic Seaboard's transfer of the KA–20 pipeline and the merger of Amere Gas Utilities Company into United Fuel, and shall also reflect the utilization of the Btu adjustment provision applicable to the demand charge proposed by Staff and hereinabove approved.

Each Respondent shall compute the refunds owing to its customers on the basis of the rates to be filed as described above, and in the light of the other determinations in this opinion, and shall file with the Commission and satisfactory to it, their plans for making refunds showing the amounts to be refunded, the amounts for principal and interest computed separately for each jurisdictional customer,[30] and the details of their calculations underlying the said amounts, such plans to be filed within 45 days of the date of issuance of this opinion, as more fully provided in the order hereto.

The Commission further finds:

(1) United Fuel and Altantic Seaboard are "natural-gas companies" under the Natural Gas Act, and their sales in interstate commerce of natural gas for resale involved in this proceeding are subject to Commission jurisdiction.

(2) United Fuel's proposed increased rates and charges contained in its Second Revised Sheets Nos. 8 and 9, Fourth Revised Sheets Nos. 7, 27, and 33, and Fifth Revised Sheet No. 22 to its FPC Gas Tariff, Fifth Revised Vol. No. 1, which were made effective April 5, 1960, by the Commission's order issued May 6, 1960, in Docket No. G-20270, have not been shown to be just and reasonable or otherwise lawful under the Act, and should be disallowed.

(3) Atlantic Seaboard's proposed increased rates and charges contained in its Third Revised Sheets Nos. 8, 9, 13, 14, 16D, 17D, 26 and 28,[31] Fourth Revised Sheets Nos. 7, 12, 16A and 17A, and Fifth Revised Sheets Nos. 22 and 24 to its FPC Gas Tariff, Seventh Revised Volume No. 1, which were made effective April 5, 1960, by the Commission's order issued April 26, 1960, in Docket No. G-20272; Fourth Revised Sheets Nos. 16C and 17C which were made effective by Commission orders issued November 27, 1962 and January 25, 1963, in Docket G-16401, to supersede the Third Revised Sheets Nos. 16C and 17C, which are subject to this proceeding; and Second Revised Sheets Nos. 10, 15, 16F, and 17F, which were made effective April 5, 1960, by the Commission's order issued January 10, 1961, in Docket No. G-20272, have not been shown to be just and reasonable or otherwise lawful under the provisions of the Act, and should be disallowed.

(4) United Fuel and Atlantic Seaboard should, within 45 days of the date of issuance of this opinion, file with the Commission and satisfactory to it, revised tariff sheets providing for rates and charges to be effective as of April 5, 1960, to May 1, 1961, and on and after May 1, 1961; and such rates shall be developed as specified in the Rates and Refunds section of this opinion, and shall take effect as of the aforesaid dates upon Commission approval of the said filings.

(5) United Fuel and Atlantic Seaboard should compute and refund to its jurisdictional customers the amounts by which the rates and charges disapproved in paragraphs (2) and (3) above, exceed the rates and charges which Respondents must file subject to Commission approval under paragraph (4) above, together with interest at 7 percent per annum, as more fully provided in the Rates and Refunds section of this opinion, the Commission orders permitting Respondents rates to take effect subject to refund cited in paragraph (2) and (3) above, and in the order hereto.

(6) Exceptions not discussed herein are disposed of by the Examiner's decision or are immaterial to the result in this case. Except to the extent herein granted, all the exceptions filed are without substantial support in the facts or reasonable basis in law and should be denied.

---

[30] There shall be deducted from the principal and interest so computed, the interim refund of principal and interest made to the jurisdictional customers under the Commission's order issued September 14, 1962, permitting interim refunds.

[31] Sheets 26 and 28 were erroneously referred to in the Commission's order issued April 26, 1960, and in the Examiner's decision herein on page 1380, and in finding (5) and ordering paragraph (F), as Fourth Revised Sheets 26 and 28.

The Commission orders:

(A) The proposed increased rates filed by United Fuel and Atlantic Seaboard, referred to in paragraphs (2) and (3) above, are hereby disallowed.

(B) United Fuel and Atlantic Seaboard shall, within 45 days of the date of issuance of this opinion, file with the Commission and satisfactory to it, revised tariff sheets providing for rates and charges to be effective as of April 5, 1960, to May 1, 1961, and on and after May 1, 1961; and such rates shall be developed as specified in the Rates and Refunds section of this opinion, and shall take effect as of the aforesaid dates upon Commission approval of the said filings.

(C) United Fuel and Atlantic Seaboard shall compute and refund to their jurisdictional customers the amounts by which the rates and charges disapproved in findings (2) and (3) above exceed the rates and charges which Respondents must file subject to Commission approval under paragraph (B) above, together with interest at 7 percent per annum, as more fully provided in the Rates and Refunds section of this opinion, and in the Commission orders permitting Respondents' rates to take effect subject to refund, cited in findings (2) and (3) above. In this connection, United Fuel and Atlantic Seaboard shall, within 45 days of the date of issuance of this opinion, file with the Commission and satisfactory to it, and with all their jurisdictional customers, the refund plans more fully described in the "Rates and Refunds" section of this opinion, respecting the amounts Respondents must refund to their jurisdictional customers on the basis of the rates to be filed herein, and shall make the said refunds within 15 days of the date of Commission approval of the said refund plans.

(D) Respondents shall, within 30 days after making the refunds required by paragraph (C) above, file with the Commission in writing and under oath a report showing that they have made the refunds ordered herein, together with releases from each of their jurisdictional customers. Upon making the refunds ordered in paragraph (C), to the satisfaction of the Commission, the undertakings given by Respondents to make refunds shall be discharged and these proceedings shall be terminated.

(E) All natural-gas companies subject to the jurisdiction of the Commission which directly or indirectly receive refunds as a result of this opinion and order shall refund to their customers without additional interest all refunds received from United Fuel and Atlantic Seaboard within 45 days of receipt of such amounts. If any such natural-gas company objects to making such refunds, it shall file a protest with the Commission and before being required to make such refunds will be afforded a hearing. Within 30 days after making the refunds required by this paragraph, all such natural-gas companies shall report to the Commission in writing and under oath the manner of making such refunds, including a list of customers and the amount refunded to each customer.

(F) The Examiner's decision issued in this proceeding on June 19, 1963, is modified as herein set forth and as so modified is adopted by the Commission as of the date of issuance of this opinion, to constitute with this opinion the Commission's decision in this case. Exceptions to the Examiner's decision not granted herein are denied.

Commissioner Ross *dissenting in part.*

Ross, Commissioner, *dissenting in part:*

This was to be the case—finally—when the Commission in all due solemnity, would perform the last rites for the Atlantic-Seaboard "formula".[1] But the condemned method, whose obituary was heralded in *Southern Natural* (Op. No. 379, 29 FPC 323) has miraculously survived to officiate at what was to be its own funeral—to the surprise of all including the intended executioners.

To be completely fair, it does seem evident that the Commission does not really adhere to the Seaboard method but chooses a particular commodity rate, for reasons not always clearly elucidated, and works backwards to compute the tilt, deviation, or what have you, from the Seaboard method. The obvious and as yet unresolved question posed here is why the majority considers it necessary to go through this exercise when they too recognize in this very case "that the use of *Seaboard* for rate design has serious infirmities". (*Supra*, p. 1347)

Why don't we stop the pretense? Why not sensibly begin with a functional cost assignment and then consider the various other relevant factors? It seems necessary to emphasize that it is *costs* we are to allocate. The purpose of a valid cost allocation is to trace or attribute to units of output (*i.e.* an Mcf of gas of off-peak or on-peak service) the costs incurred in their production.[2] Where a readily discernible and measurable relationship exists between variation in output (Mcfs) and variations in costs, the assignment of this type of costs to units of output is clear. Thus, purchase gas costs and compressor fuel costs which vary in proportion to output (number of Mcfs sold) should be assigned a uniform share of such costs with possible minor exceptions.

Fixed or capacity costs are not so readily assigned. The apparent reason for the difficulty is the false assumption that fixed costs are "joint costs" incurred in the production of joint products: on-peak and off-peak service. However, Professor Bonbright and Ralph Davidson have made a convincing case in their books referred to above that capacity costs are not joint costs. Rather, they are costs incurred in the production of common products, one of which—off-peak service—is a distinct by-product, whereas the other—on-peak service—is the main product, the *raison d'etre* of the pipeline. Fixed costs, by definition, do not vary with units of output.

With this classification as a starting point, the Commission could then examine the resulting commodity rate in the light of the other pertinent factors: promotion of efficient (high load factor) operation; avoidance of discriminating against economic peak showing, including underground storage, as well as any undue discrimination; competition from other pipelines and energy sources; stability of earnings; predictability of demand and commodity rates; expected growth of sales, and others. In my opinion, the commodity and consequent demand rates recommended by both respondents are reasonable, considering all these factors. The resulting commodity levels are 29.58¢ for United Fuel and 30.81¢ (CDS–1) and 29.11¢ (CDS–2) for Atlantic Seaboard. In each case, the commodity component includes over 2¢ per Mcf of fixed costs. Thus the interruptible customers would not receive a "free ride".

---

[1] The assignment of 50% of pipeline's fixed costs to the commodity component has no present economic basis and, in my judgment, never did.

[2] In addition, it would be preferable to separately classify those costs due exclusively to serving a particular customer. Bonbright, *Principles of Public Utility Regulation*, pp. 311–2, 347–9; Davidson, *Price Discrimination in Selling Gas and Electricity*, pp. 62, 64, 181–2.

It would not be surprising if the majority's apparent reluctance to the above approach is founded on its fear that, in a case involving substantial direct (nonjurisdictional) sales, abandonment of Seaboard would mean an increase in jurisdictional rates.[3] I do not subscribe to this unstated and untested fear. When the costs of a half empty pipeline under Seaboard are compared to a full pipeline with nominal fixed costs in the commodity component, I feel certain that both jurisdictional and nonjurisdictional customers would benefit under the latter approach.

The majority's refusal to take every reasonable advantage to reduce Atlantic-Seaboard's commodity rate is hard to explain in the light of its decision in *Atlantic-Seaboard Corp.* (Op. No. 368, 28 FPC 860, Nov. 27, 1962). There the Commission accepted certain tariffs whose legality is, at best, questionable, in order to protect Atlantic-Seaboard's markets which were vulnerable to other pipeline suppliers. The reason Atlantic-Seaboard was vulnerable was because of its excessively high commodity rate—a rate the majority is here perpetuating.

The majority, inconsistent with the above opinion, now says that this factor as well as the other factors described above are too "complex and uncertain" and "would virtually preclude the exercise of judgment on a reasonable predictable basis". (*Supra*, p. 1348)[4] This conclusion of the majority is unsupported. Predictability is, of course, an important factor in rate design. However, it is one factor which should be weighed with other relevant factors. Here, as in the Seaboard formula itself, the majority confuses the initial step of functional cost classification with other factors affecting rate design.

My final major criticism of the majority opinion is its utter failure to explain why it adopted the company suggested rates regarding United Fuel and the Examiner's recommended rates regarding Atlantic-Seaboard.

For these reasons, I dissent to the opinion on the rate design issue.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON PROCEEDINGS PURSUANT TO SECTION 4(e) OF THE NATURAL GAS ACT

(Issued June 19, 1963)

WILLIAMS, *Presiding Examiner:* This is a consolidated proceeding pursuant to Section 4(e) of the Natural Gas Act involving proposed increased rates by United Fuel Gas Company (United Fuel) and Atlantic Seaboard Corporation (Atlantic Seaboard) in revised tariffs tendered for filing on November 4, 1959. The Federal Power Commission (Commission) by orders of December 4, 1959 and March 1, 1960, subjected such filings to public hearing and suspended the imposition thereof until April 5, 1960. The rates of United Fuel and Atlantic Seaboard were placed in effect upon such date subject to refund with the latter company's filing reflecting certain subsequent revisions approved by the Commission in orders dated April 26, 1960 and January 10, 1961.

Rate settlement agreements were entered into by United Fuel and Atlantic Seaboard with their customers, certain non-customers interveners and the Staff of the Commission. The stipulated costs of service of which there are two with respect to each Applicant (Exhibits 1 and 2), are based upon

---

[3] Such a concept illogically assumes that because jurisdictional *cost* would be higher relative to nonjurisdictional costs, that jurisdictional rates would be higher on an absolute basis.

[4] Then the majority proceeds to use these same complex and uncertain factors to justify a tilt from Atlantic-Seaboard! (Op. p. 1348, et seq.)

the same test period, namely, the twelve-month period ending March 31, 1960. One cost of service in each case is to be used in designing rates for the period from April 5, 1960, to May 1, 1961, and the other has been adjusted to reflect increases in purchased gas costs and is to be used in designing rates to become effective as of May 1, 1961. Such agreements were conditionally approved by the Commission in orders dated December 29, 1961; February 19 and March 20, 1962, respectively.

With respect to United Fuel, a public hearing was ordered for the purpose of resolving the following issues:

1. The level of the demand and commodity components of the rate in Rate Schedule CDS-1 and the rate levels in Rate Schedules AOS-1, SGS-1 and ES1, included in United Fuel's FPC Gas Tariff, Fifth Revised Volume No. 1, applicable (i) to the period April 5, 1960, through April 30, 1961, and (ii) to be effective on and after May 1, 1961, until superseded.

2. The manner in which United Fuel shall make refunds or further revise its rates pursuant to the settlement agreement or the provisions of Paragraph D of the Order of March 20, 1962.[1]

3. The depreciation rates of United Fuel to be applied to its underground storage and transmission properties and its Kenova Extraction Plant.

As to the Atlantic Seaboard, it was likewise directed that the following matters be heard:

1. The level of the demand and commodity components of the rate in Rate Schedules CDS-1, CDS-2, CDS-PR-1, and CDS-PR-2, and the rate levels in Rate Schedules AOS-1, AOS-2, IS-1 and IS-2 included in Seaboard's FPC Gas Tariff, Seventh Revised Volume No. 1 (i) for the period beginning April 5, 1960 through March 31, 1961 and (ii) to be effective on and after April 1, 1961 until superseded.

2. The manner in which Atlantic Seaboard shall reduce rates and make refunds to reflect rate reductions and refunds from suppliers and to meet the requirements of Paragraph C of the Order of December 29, 1961.[2]

3. The continued inclusion in the heat content adjustment provision of said Rate Schedules CDS-1, CDS-2, CDS-PR-1 and CDS-PR-2 of the clause:

> Demand charge
>
> The Demand Charge shall be increased in proportion to the amount by which the average total heating value of the gas delivered in the month in which the Billing Demand was established is greater or less than 1000 Btu per cubic foot.

The Commission permitted the intervention of some twenty-two parties in this proceeding as set out in the previous specification of appearances.

On June 27, 1962, the Independent Natural Gas Association of America petitioned to intervene in this proceeding upon a limited basis for the purpose of contesting the participation of the Coal Interests or, alternately, to appear as *amicus curiae*.

The Commission subsequently denied the petition to intervene, but granted the right to file briefs and participate in oral argument with respect to the issue presented.

---

[1] See note in connection with paragraph 2, below.

[2] While the wording of this paragraph differs from the companion provision in the order relating to United Fuel, the Examiner deems the latter language to correctly state the issue for decision.

Public hearings commenced on June 25, and with limited recesses intervening, were completed on October 26, 1962. On September 14, 1962, the Commission authorized the Applicants to make payment of interim refunds pending the outcome of the issues involved in the instant matter.

United Fuel, a West Virginia corporation and a wholly-owned subsidiary of the Columbia Gas System, is engaged in the production, purchase, transmission, underground storage and distribution of natural gas. A very substantial portion of its gas supply, commonly referred to as Southwest gas, is purchased from Tennessee Gas Transmission Company (Tennessee) and producers in Louisiana.

United Fuel sells gas at wholesale to Atlantic Seaboard, Columbia Gas of Kentucky, Inc., Kentucky Gas Transmission Corporation, The Manufacturers Light & Heat Company (Manufacturers), The Ohio Fuel Gas Company (Ohio Fuel), The Ohio Valley Gas Company, The Portsmouth Gas Company, Luther Lusher, and Consumers Gas Utility Company, for resale to ultimate consumers extending from Kentucky and Ohio in the west, to the Hudson River Valley, Baltimore and Washington in the north and east. In addition to its wholesale business, United Fuel sells gas at retail to customers in West Virginia, to a few small intrastate wholesale customers in Kentucky, and to one direct industrial customer in Ohio.

Atlantic Seaboard, also a wholly-owned subsidiary corporation of the Columbia Gas System, owns and operates a 420 mile 20-inch gas transmission pipeline extending from Boldman, Kentucky to the Maryland-Pennsylvania state line north-east of Washington. It also owns and operates a multiple 262 mile, 26-inch gas transmission pipeline extending in an easterly direction from Clendenin, West Virginia to a point near Rockville, Maryland, where it joins the 20-inch line previously mentioned. In addition, both lines are connected by a 24-inch transmission pipeline extending approximately 49 miles from a point in Hardy County, West Virginia to a point in Greene County, Virginia. While the major portion of Atlantic Seaboard's gas supply is purchased from United Fuel, the corporation buys small amounts from independent producers in West Virginia and Kentucky who are close to the pipelines, the Amere Gas Utilities Company in the Beckley and Mullens, West Virginia area and Transcontinental Gas Pipe Line Corporation in Virginia and Maryland.

Atlantic Seaboard sells gas only at wholesale and it neither owns nor operates any distribution properties. The customers of the corporation, all jurisdictional, are Amere Gas Utilities Company; Baltimore Gas and Electric Company (Baltimore); The City of Charlottesville, Virginia; Commonwealth Natural Gas Corporation (Commonwealth); Cumberland and Allegheny Gas Company (Cumberland); Lynchburg Gas Company (Lynchburg); The Manufacturers Light & Heat Company (Manufacturers); Roanoke Gas Company (Roanoke); Virginia Gas Distribution Corporation (Virginia Gas); Washington Gas Light Company (Washington) and Zebulon Gas Association, Inc.

Both Applicants operate extensive underground storage pools and have substantial investments in such facilities.

United Fuel and Atlantic Seaboard with minor exceptions make their sales of gas under two-part contract demand rates to their respective customers, all of whom have substantially different billing demand load factors, ranging from approximately 100 percent in the case of Manufacturers and Ohio Fuel to about 45 percent with respect to Washington.

The demand portion of the two-part rate is related to the peak requirements of a customer (CDS-1 Tariff) while the commodity charge is related to the volumes of gas actually delivered. The two-part rate is generally used by the pipeline industry, for the purpose of equitably distributing the supplier's cost of service among its customers having different load factors. Because the composite load requirements of the various customers leave substantial amounts of unused pipeline capacity during off-peak periods, the failure to use such capacity results in comparatively high average unit costs per Mcf of gas transported. In order to reduce these high average costs, pipeline customers are inclined to build underground storage or peak-shaving facilities of various kinds, and to promote the sale of gas on an interruptible basis to commercial and industrial consumers.

The principal and most controversial issue in this proceeding is whether the demand and commodity charges in the proposed contract demand rate schedules of the Applicants must reflect a precise translation of the classified and allocated costs of the respective companies, or whether the evidence presented during the course of litigation warrants a reasonable departure from mathematically derived rate levels.

The Applicants urge that the matter of designing an equitable and proper rate is a complex one and may not be achieved by resorting to a mathematical formula. It is their contention that rates must be designed upon the basis of informed managerial judgment which takes into consideration, for example, the following questions:

a. How much of the fixed or capacity costs should be recovered in the demand charge?

b. Should the supplier's fixed costs be recovered from the customers in proportion to their peak requirements which caused the supplier to incur such costs?

c. Should the fixed charges to the customers be the same as the fixed costs incurred by the supplier?

d. Should part of the fixed costs be recovered in the commodity component of the rate and part in the demand component? And if so, how much in each?

While the Applicants do not object to using as a guide the so-called "Seaboard Formula", a classification and allocation of costs adopted by the Commission in Opinion No. 225 (*Atlantic Seaboard Corp., et al.*, 11 FPC 43, 56) it is their position that other equally important factors peculiar to their individual situation, should be considered in designing rates.

The principal witness appearing in support of the Applicants' affirmative case was Mr. C. H. Workman, Vice President of the Charleston group of companies of the Columbia Gas System which includes United Fuel, Atlantic Seaboard, Amere Gas Utilities Company, Columbia Gas of Kentucky, Inc., Kentucky Gas Transmission Corporation and Virginia Gas Distribution Corporation. Mr. Workman, Vice President in charge of the rate and depreciation department of this organization since 1958, has had some 34 years of cumulative experience in the natural gas industry.

The rates recommended by the Applicants were designed by Mr. Workman and, according to his testimony, they will enhance the competitive position of United Fuel and Atlantic Seaboard, more equitably distribute costs among their respective customers and promote more efficient use of facilities through the encouragement of interruptible off-peak sales and peak-shaving by wholesale customers. It is Mr. Workman's position that the recognition of these factors will keep to a minimum the unit cost of service to ultimate consumers, including the rapidly increasing number of residential customers. The thrust of the Applicants' case is that the foregoing empirical factors may be given proper recognition only through rates which are tailored to meet individual circumstances and not through the application of a predetermined formula. Mr. Workman characterizes his approach to rate design as one depending upon informed judgment. This approach, in his opinion, is necessary because of the many significant developments which have affected the natural gas industry since Opinion No. 225 embracing the Seaboard formula was issued in 1952.

Dr. Nelson Lee Smith, distinguished rate expert, college professor and a former member of the Federal Power Commission, testified in behalf of the interveners supporting the Applicants, that a rate design should be adopted by the present Commission which will offset declining load factors resulting from the substantial increases in space-heating and residential sales. It is Dr. Smith's opinion that the sale of interruptible off-peak gas at prices which recover something in excess of incremental cost is one of the most effective means (along with peak-shaving and storage) of counter-balancing the space-heating load. Mr. Frank A. Knecht, Manager of the Rate Research Department of Baltimore Gas and Electric Company, testified that contemplated sales of interruptible gas will increase Baltimore's purchases from Atlantic Seaboard by 30% with a consequent improvement in the company's purchase load factor of 12.1 percentage points by 1964. He felt, however, that if Atlantic Seaboard's commodity component is increased, such sales will not materialize and that many present interruptible customers will be lost to competitive fuels. Mr. C. E. Starkey, Vice President of Commonwealth related that his company has already lost substantial interruptible business and that more industrial customers will terminate their contracts unless Commonwealth's rates can be made competitive with lower priced fuels. Witnesses testifying for Roanoke, Virginia Gas, Manufacturers, Lynchburg, United Gas Improvement and Ohio Fuel likewise favored a low commodity and high demand rate in order to encourage and, in fact, to retain current interruptible business.

Two interveners, Washington and the Fuels Research Council, Inc., *et al.* (Coal Interests), urge rate levels determined strictly within the framework of the method of cost classification and allocation set forth in the previously-mentioned Opinion No. 225, and in Opinion No. 228 (*Northern Natural Gas Company*, 11 FPC 123).

The parties sanctioning the adoption of rate levels which, in their opinion, conform strictly with costs classified and allocated in accordance with alleged Commission precedents, contend there can be no departure from such precedents except upon a showing that "mitigating circumstances" are present.[8]

---

[8] At Page 6 of the Brief of Washington Gas Light Company a portion of Opinion No. 225, is paraphrased as follows: "The Commission held in that case that in the absence of mitigating or unusual circumstances, the allocated demand and commodity cost of service components should be used for the design of rates so that the demand and commodity rate revenues would correspond with the demand and commodity components of the total jurisdictional costs of service (*Atlantic Seaboard Corporation*, 11 FPC 43, at 62; 22 R. 2725, Benson)."

The actual words of the Commission were:

> We have previously expressed our opinion as to the proper method for allocation of costs to the demand and commodity components of the costs of service. While, as we have pointed out, such an allocation of costs is not necessarily controlling in the *fixing of the precise level of the demand and commodity components of the rates, they are,* in the absence of other mitigating circumstances, *a reasonably accurate guide* as to the appropriate level for the demand charge and the commodity charge. In this case there are no unusual mitigating circumstances. [Italics supplied.]

Proponents of departure contend that the wording of Opinion No. 225 does not compel a direct translation of costs into rates since costs are nothing more or less than a reasonably accurate guide in the process of determining rate levels. They further urge that circumstances prevail today which did not exist and were not contemplated at the time the Atlantic Seaboard opinion was issued. It is alleged that the unusual and onerous nature of prevailing circumstances would require prompt Commission mitigation of the resulting distress which would inevitably follow if "Seaboard" rates are imposed. The usual or mitigating circumstances referred to by the parties will hereinafter be discussed in detail.

The Examiner has reviewed the opinions of the Commission relied upon by the Applicants and the various interveners to support their respective positions as to rate design. Particular attention has been paid to the opinions (or orders) of the Commission which have been cited as precedents for current concepts of cost classification, cost allocation and rate design. The review of Opinion No. 225 and subsequent opinions bearing upon the matter of rate design leads the Examiner to the conclusion that the procedures established by the Commission as to cost classification have, for the most part, a persuasive continuity, whereas those relating to allocation and rate design seem to have been developed upon a case by case basis, with apparently less reliance placed upon precedent than upon the circumstances present in particular cases.

It is patently clear from a reading of Opinion No. 225 that the rate design procedure established therein did not result from a strict translation of the classified costs. At page 58 *supra*, under the heading, "Allocations to firm customers", the Commission adopted the findings of the Examiner in determining costs (revenue requirements) applicable to firm sales. This was accomplished by deducting from the total commodity costs the revenues anticipated to be received from interruptibles. The Examiner stated in his initial decision, reported at page 528, *supra*:

> As there is no evidence of record that revenues estimated to be received in connection with interruptible sales[7] will not cover the cost of rendering interruptible service on the basis of a 6 percent return,[8] the amounts of such revenues are appropriately deductible from the total cost of service, to obtain costs with respect to which applicants are entitled to look to other customers (firm) for further revenue.
>
> [7] As revised with respect to West Virginia Pulp and Paper Co., *infra*, and as adjusted for heat content in each instance, also *infra*.
>
> [8] The evidence is that revenues from sales to Manufacturers, for resale to Lukens, *more than cover the cost* to applicants of rendering that service. [Italics supplied.]

The interruptible revenues referred to above were determined from the interruptible rates set forth in the Examiner's decision, *supra*, at pages 538-539 and are the same as the rates in Findings (9) and (10) of Opinion No. 225. These rates are straight-line rates of 28.55 and 30.00 cents per Mcf (subject to a heat adjustment) for sales for resale to industrial consumers normally using more than 100,000 Mcf per month and less than 100,000 Mcf per month, respectively. It is obvious that the interruptible rates found to be just and reasonable by the Commission contain substantial demand charges since the Contract Demand Rate Schedule CDS-1 contained a demand charge of $1.46 and a commodity charge of 24.5 cents per Mcf. Thus, the deduction of interruptible revenues, which undisputably contained a large element of demand costs, from the total commodity cost *did not result in a rigid translation of costs into rates in the very opinion* *which is relied upon so heavily as a firm precedent for strict "Seaboard" rates.* The effect of the foregoing revenue deduction procedure in Opinion No. 225 obviously resulted in a higher demand charge and a lower commodity charge than would have been found if classified costs, before adjustment, had been translated into rates.

The following paragraphs quoted from Opinion No. 228 (*Northern Natural Gas Company,* 11 FPC 123, 146) describe the manner in which rate levels were determined in that proceeding:

> On the facts of the record, we prescribe the following rate for the CD-1 schedule as just and reasonable:
>
> Demand charge—$1.30 per M.c.f. of billing demand.
>
> Commodity charge—15 cents per M.c.f.
>
> This rate was developed in the following manner: A unit commodity price was first developed by dividing the total commodity costs by the total volume of gas delivered during the test period. The total demand costs were reduced by the difference between *revenues* from the overrun gas rate of 17 cents per M.c.f. and the developed unit commodity cost. A unit demand cost was then developed by dividing the *adjusted* demand cost by the total billing demand units. [Italics supplied.]

At Page 145, *supra,* the Commission referred to overrun gas as follows:

> Rate schedule for overrun interruptible gas.—At the present time, several of Northern's customers take substantial volumes of gas in excess of their contract demand on an interruptible basis. Northern has no separate rate schedule for such gas, and the utility is charged for such gas merely the commodity charge of the demand-commodity rate. As we have pointed out above in our discussion of the minimum billing demand provision, Northern would charge utilities not taking their contract demand volumes the demand charge for such gas, and assess only the commodity charge against companies purchasing the gas. The sale of gas above the contract demand volumes on an interruptible basis is a separate service for which there should be a separate rate schedule, as required under our rules. We believe also that the rate for such service should include not only the commodity cost related thereto, but, in addition, should include some of the demand cost related thereto. The Staff's proposed rate schedule R-1 describes the service provided and it appears to represent reasonable demand and commodity costs associated with such service. Therefore, the staff's rate schedule R-1 will be prescribed for this service. [Footnote omitted.]

Thus, in Opinion No. 228, the levels of the demand and commodity charge were also *not a direct translation of costs,* but were *arrived at by deducting revenues from costs as classified and allocated.* The Examiner does not question the rates ordered by the Commission in such opinion, but it is obvious that if the Commission had followed the precepts of Opinion No. 225 with mathematical precision, it could not have arrived at a rate of 17 cents per Mcf for overrun gas. If, however, a strict translation of costs into rates had been followed, the rate would have been 15 cents per Mcf.

The costs and rates of United Fuel were subject to Commission adjudication in Docket Nos. G-1781 and G-2055 (*United Fuel Gas Company,* 12 FPC 251 and 351, respectively) within approximately one year after the issuance of Opinions No. 225 and 228. In the opinions in these cases, Nos. 258 and 258-A, the Commission extensively reviewed, *inter alia,* the matters of cost allocation and rate design on the United Fuel system. With respect to Opinion No. 258, the table at p. 287 of the printed report shows the demand charge revenues under the rates prescribed by the Commission would amount to $4,695,515 whereas the table at p. 280 shows the costs contained in demand component of the Interstate Sales for resale are $3,347,826. The difference between the demand revenues and costs amounts to $1,347,689 or a collection of demand revenues exceeding costs by 40.3 percent.

At page 286 *supra*, the Commission stated:

> Thus, we provide a demand-commodity type of rate which gives effect to load factor, but our time interval for determining the demand is greater than customary.
>
> The demand charge under the two rate schedules is $0.50 per month per M.c.f. of billing demand as defined in the rate schedules. This demand charge, when applied to test year sales would recover revenues somewhat in excess of the classified demand costs herein found proper. However, where a major change is made in a company's rate structure, and the elimination of the $1.45 demand charge from the present tariff would be such a change, there may be concomitant changes in its sales characteristics. Under the circumstances, therefore, we find it appropriate to prescribe a demand charge somewhat higher than a strict application of the classification of costs might appear to warrant.

In Supplemental Opinion No. 258-A, the Commission prescribed demand charges of $0.90 in each of the two rate schedules rather than the $0.50 demand charge previously ordered, but at the same time made an off-setting reduction in the commodity charge. Thus, the classified and allocated costs of United Fuel in this case were completely disregarded by reason of the final setting of a demand charge which would recoup more than 100 percent above demand costs. Also, in Docket Nos. G-16841 (Midwestern Gas Transmission Company) and G-16842 (Tennessee Gas Transmission Company), 21 FPC 653, 664, the Commission ordered Midwestern to file a rate which would recover in the demand component all the costs associated with Midwestern's investment, all purchased gas demand costs and a small amount of purchased gas commodity costs, or in the alternative Midwestern could file a straight line rate. The company filed the two part rate schedule.

In Opinion No. 273, (*Ohio Fuel Gas Company*, 13 FPC 281, 297) the Commission stated.

> Since the relative level of the demand and commodity components of the total rate in effect prior to February 11, 1952 may have had some influence on the characteristics of the operations during the test year, and as Ohio Fuel's customers had geared their operations over a number of years, to such a rate form, we find that it is reasonable to design a rate closely approximating such a historical rate. The demand charge of $2.00 contained in Ohio Fuel's FPC Gas Tariff, Volume No. 1, together with our modification of the billing demand determinations, appears to be reasonable although it produces demand revenues somewhat in excess of classified demand costs. The corresponding commodity charge in Docket No. G-1786 is 28.3 cents per Mcf.

The position taken by United Fuel and Atlantic Seaboard, concurred in by many of the interveners in this proceeding, seems to be consistent with the position taken by the Commission in the last mentioned case where, because of the particular circumstances involved, (apparently considered to be "mitigating" in nature) it approved a rate based upon historical influences rather than a rate derived from strict cost allocation or translation.

The above-cited cases relied upon by the proponents of rates conforming rigidly to costs classified and allocated in the "Seaboard" pattern, as well as other cases, such as Opinion No. 226 (*Alabama-Tennessee Natural Gas Co.*, 11 FPC 75), Opinion No. 227 (*Transcontinental Gas Pipe Line Corp.*, 11 FPC 94) and Opinion No. 235 (*Colorado Interstate Gas Co.*, 11 FPC 324), which were decided by the Commission shortly after the Seaboard case, do not, in the opinion of the Examiner, reveal "immutable principles"[4] with respect to rate design. In fact, deviation as a result of the consideration of individual circumstances appears to be the rule rather than the exception.

The Examiner's curiosity was provoked by the broad and somewhat ambiguous assertions of the Coal Interveners, appearing at page 3 of their reply brief to the effect that the Atlantic Seaboard formula has been the subject of discussion in at least 40 separate major pipeline certificate or rate cases and that in 26 of the 40 cases, the Seaboard formula was followed or quoted with approval.

A review of a representative number of the cases alluded to by the Coal Interests (listed in Appendix A of their reply brief) in support of the above-statement, reinforces the Examiner's previous conclusion that more often than not, the Commission, while approving a Seaboard cost classification and allocation, has not insisted upon a literal translation of the cost formula into rates.

The Applicants and many of the interveners in this proceeding contend that the Seaboard method of cost allocation is discriminatory since it penalizes high load factor customers by assessing them with an unfair portion of the fixed commodity costs associated with unused capacity. Washington and the Coal Interests on the other hand, claim that no inequities result from the division of operation expenses and fixed costs in the commodity component on the basis of annual volumes of gas sold during the test period. In support of its position, Washington relies upon Opinions Nos. 326 and 326-A (*El Paso Natural Gas Company*, 22 FPC 260, 279 and 659, 665, respectively) to the effect that: (a) high load factor customers obtain greater service from a pipeline and, therefore, should be required to pay a larger portion of capacity costs; (b) the argument of the high load factor customers assumes the invalidity of the Seaboard formula and (c) departure from such formula will place a greater cost burden on the domestic and low-load consumers for the benefit of industrial customers.

The Examiner believes that the operations of the El Paso system differ from those of United Fuel and Atlantic Seaboard in a significant number of details. The El Paso system operates at very high load factor, it has negligible storage, and the main sales load centers are located at the terminus of its line where jurisdictional deliveries to three customers account for approximately 88.0 percent of the total jurisdictional sales (82 percent of capacity). The load factor of purchases by these three customers is in excess of 95 percent while the load factors of the small customers in the more easterly and up-stream zones of Texas, New Mexico and Arizona run from 45 to 60 percent. It does not appear that any extreme burden has been placed upon the California customers by reason of the fact that they are required to pay approximately 88 percent of the fixed costs in commodity component rather than the 82 percent indicated by their demand responsibility, since the increase is only slightly more than 7 percent.

---

[4] I recognize the importance of this Commission's establishing reasonably simple and stable cost-allocation procedures which can be well understood and anticipated by all concerned; such standards should be followed, without deviation where, under all the circumstances and conditions of system operation and cost behavior, they are appropriate. But there is danger, as I see it, in too strict adherence to an arbitrary formula—no matter how easy and convenient this sterile approach may be—under circumstances, such as those here present, which makes its application of dubious validity.

We should, in my opinion, recognize the problem of cost allocation as what it is—not an accountant's or engineer's mere mathematical computation based on certain immutable 'principles,' but an application of expert judgment to the peculiar economic facts of the particular case before us. Far from confining such important procedures in a straight-jacket applicable to all situations—which I fear the Commission is permitting—we should, in my judgment, encourage the thoughtful testing of allocation procedures heretofore followed and the development of new and promising experimental approaches to unique situations, such as those suggested by the witness in this proceeding mentioned above. Concurring opinion of Commissioner Nelson Lee Smith in *Home Gas Company, et al.* 18 FPC 241, 279.

In contrast, however, the customers of the United Fuel and Seaboard systems having the greater capacity requirements, as measured by the billing determinants shown in Exhibits Nos. 72 and 75, do not have load factors higher than the lesser capacity customers. As for example, with respect to the 12 months ended March 31, 1960, the Ohio Fuel Gas Company billing demand responsibility is approximately 17.5 percent and its volumetric responsibility 27.6 percent, an increase in the latter of more than 50 percent over the percentage of demand responsibility. On the Seaboard system during the same year, the percentage increase to Lynchburg in commodity responsibility, as compared to demand responsibility, is approximately 23.2 percent and to Manufacturers the increase is more than 60 percent. Upon the basis of the cases before the Examiner, it cannot be said that undue discrimination exists by reason of such differences, but the facts of record do indicate that some deviation from a strict application of the Seaboard formula in the design of rates may be justified by reason of the heavy burden placed upon the high load factor customers.

The Examiner does not propose, nor do the Applicants, that the entire cost of unused capacity be placed wholly upon those who fail to use their contractual entitlements. If this position were taken, the classification of any fixed costs or operating expenses, excluding purchased gas costs, in the commodity component would be nothing more than a meaningless gesture. To the extent, however, that costs of unused capacity are included in the commodity component and distributed among customers on the basis of the annual sales volumes rather than upon the basis of their capacity requirements, there results an overstatement of the commodity price in a rate schedule where such rates are literally translated from costs classified in the Seaboard manner.

The opponents of rates deviating from a strict Seaboard allocation also claim that the development of high load factor sales are undesirable regardless of the manner in which they are achieved. They also allege that there is a conflict between the concept of developing high load factor sales through the means of an interruptible market and where, as in the present case, tariff restrictions exist. It is also argued that rates deviating from the Seaboard formula will not provide equal opportunity among all customers of the Applicants to improve their respective load factors. Finally, it is contended that additional interruptible sales are not desirable since the transmission facilities of Columbia Gulf are already being operated at maximum capacity and United Fuel's facilities which connect with Columbia Gulf and extend to Cobb Compressor Station, were specifically designed for maximum summer use.

It is a matter of record in this proceeding that certain customers of the Applicants purchase gas from these suppliers at load factors approximating 100 percent. In the main, the load factors of such customers have been achieved through the development of extensive storage facilities and curtailable industrial loads. Other customers of United Fuel and Atlantic Seaboard have developed comparatively high load factors through the use of peak-shaving equipment or by the attachment of commercial and industrial interruptible customers. The Examiner is convinced from the testimony of record that the management of the companies participating in these proceedings can not be charged with having developed high load factor sales without good reason or intelligent design. Certainly the development of storage capacity as close to load centers as practicable is sound engineering practice and economically beneficial to ultimate consumers. Manufacturers, which purchases from both United Fuel and Seaboard at a high load factor, has storage fields in Northern West Virginia, Ohio and Pennsylvania which permits it to serve customers at peak capacity requirements without the necessity of installing equivalent capacity in pipelines connecting with United Fuel or any other supplier.

The procurement of interruptible customers by distributors cannot be viewed as being inconsistent with the boiler fuel limitations imposed by the tariffs of United Fuel and Atlantic Seaboard since there is no evidence in this proceeding that the Applicants' customers have disregarded this tariff prohibition. The restrictive provisions refer specifically to boiler fuel sales in excess of 2000 Mcf per day and do not, in the Examiner's opinion, apply to other industrial or commercial uses which may be interrupted. Sales of this nature when priced at an equitable commodity amount by the pipeline company should be beneficial to all its customers by decreasing the overall unit commodity costs and rate prices.

The attitude taken by Washington that interruptible sales are in conflict with the Applicants' boiler fuel restrictions is hardly consistent with the position this intervener recently took before the District of Columbia Public Utilities Commission, (*Washington Gas Light Company*, 43 PUR 3d 250), in requesting approval of a new interruptible rate schedule for large volume users. At p. 254 of the reported case the Public Utilities Commission stated,

> The company has a special tariff for users of gas air-conditioning equipment, and another special tariff covering gas used for water heating, air conditioning, and the firing of boilers when the use of such gas is definitely off-peak in character. This later tariff is available only for the 8-month period from April 1st to November 30th. Both of the foregoing tariff's represent attempts by the company to develop sales of gas during off-peak periods. To a small extent they accomplish their purpose but fall short of effecting any real contribution toward an improvement of the load factor, as during the warm months the company has available to it an excess of gas. The company contends that the answer to its problem is to sell such excess gas to large volume customers who would be willing to use gas on an interruptible basis provided the rate is attractive.

In view of such language it is exceedingly difficult to reconcile Washington's contention then with the following statement appearing at page 55 of its main brief in this proceeding:

> As the [Federal Power] Commission knows, the area served by Washington is not industrialized and the limited opportunities for load factor improvement depend on the type of sales prohibited by Seaboard's tariff.

Washington insists that rates deviating from Seaboard rates will not provide an equal opportunity among the Applicants' customers to improve their load factor. While it may be true that Washington has less likelihood to improve its load factor than other distributors, the improvement of Atlantic Seaboard's load factor by off-peak sales to other distributors would redound in benefits to all distributor customers including Washington. Furthermore, it can hardly be argued that rates based strictly on the formula will provide equal opportunity to all distributors to improve their load factors if business of an interruptible nature is not equally available to all distributors.[5]

Interruptible sales, Washington contends, are not required to improve the load factor on the Columbia Gulf system and the system of United Fuel up to the Cobb Compressor Station because these facilities are already being operated at very high load factors. The Applicants do not deny this, but point out that due to the increasing requirements of the distributors and the lack of additional storage facilities, high load factor operations of United Fuel and Atlantic Seaboard can be accomplished only if existing interruptible loads are retained and additional business of the same kind is secured.

Washington is critical of the evidence offered by Baltimore, Commonwealth and other interveners concerning the prospective loss of interruptible customers should rates reflecting a literal translation of Seaboard costs be adopted. Such testimony is characterized as vague, speculative and without probative value.

While an element of uncertainty is obviously involved in forecasting what a customer may do under a hypothetical set of circumstances, the projections made by the various interveners, who appear to be fully aware of their respective competitive circumstances, should in the Examiner's opinion, be accorded some weight, despite the deficiencies revealed by Washington and the Coal Association in the cross-examination.[6] It would indeed be imprudent for management to delay taking action to prevent impending customer loss until after the loss has become an accomplished fact.

With respect to peak-shaving and storage, the Applicants and supporting interveners recommend that the demand charge in the rate of United Fuel and Atlantic Seaboard should be high enough to encourage the installation of such facilities by their customers. This recommendation is predicated upon the generally accepted belief that the improvement of the over-all system load factor will bring about a concomitant reduction in unit costs of service. Washington takes the position, however, that a high demand charge is not warranted in view of its already installed peaking capacity, the projected Ravensworth propane storage project and its support of rates derived from a Seaboard cost allocation. While the Examiner accepts the general proposition that a high demand charge tends to encourage purchasers to install peak-shaving facilities, there is insufficient evidence in this record to conclude that a higher demand charge will in the present instance lower operating costs to the Applicants and bestow resulting benefits upon the ultimate consumers. The evidence in this case demonstrates that the economics of peak-shaving installations are basically dictated by estimates of investment and operating costs, duration of loads, rates, size of installation and other matters pertaining to the individual distributor's operations. Thus, in the absence of probative evidence from the distributors relating to these considerations, it is impossible to make findings of fact bottomed upon such matters.

---

[5] Washington did not offer any evidence with respect to its efforts or ability to develop interruptible sales.

[6] A similar situation provoked the following comment by the Commission in Opinion No. 379 (*Southern Natural Gas Company*, docket Nos. G-20509 and RP60-15):

> There is little doubt that Southern would lose industrial sales under either (Rate) Basis No. 1 or Basis No. 2, although the record does not disclose the approximate volumes which would be lost. Even though the dollar effect of such losses on Southern's customers cannot be determined exactly, we are convinced that the adverse impact of increased costs to residential and commercial consumers would be such as to be avoided if at all possible. [29 FPC at 353]

The Applicants, Manufacturers, and Ohio Fuel contend that Seaboard rates give low load factor customers too large a share of the benefits which accrue from the substantial investments made by the latter companies in underground storage facilities. Washington maintains the high load factor purchases made by these companies do not contribute to United Fuel's storage operations, but that such companies benefit from the lower costs realized by United Fuel's storage operations.

The Examiner does not consider an examination into the economics of the storage operations of Manufacturers and Ohio Fuel to be necessary in this proceeding. It is sufficient to note in passing, that such operations permit these companies to purchase their requirements at extremely high load factors and to obtain thereby, low unit costs of purchased gas.

Exhibits Nos. 22 and 32 and testimony pertaining thereto, were offered by the Applicants for the purpose of setting forth their position as to classification of costs on a fixed and variable basis. They claim that such a classification of costs should be fully considered and given just weight by the Commission in conjunction with a classification made pursuant to the standards set out in Opinion No. 225. It is alleged that a fixed and variable cost classification shows the level of the commodity rate which is required to recoup all costs classified by the Applicants as variable, and the amount of fixed costs which would be recouped under a commodity rate set higher than the variable rate. Applicants do not, however, contend that rate design should follow a fixed and variable cost classification precisely.

As the witness testifying in behalf of Washington pointed out, there are many cost classification theories which are at variance with the fixed and variable classification used by United Fuel and Seaboard. For example, some authorities hold that return associated with stock capital and income taxes are true variable costs. Inherent in the companies' fixed-variable concept is the assumption that return is a fixed cost. This assumption has led to a widespread, but fallacious notion that natural gas companies are "guaranteed" revenues which will cover capital costs. At *F.P.C.* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 590 (1942) the Court said:

> *But regulation does not insure that the business shall produce net revenues*, nor does the Constitution require that the losses of the business in one year shall be restored from future earnings by the device of capitalizing the losses and adding them to the rate base on which a fair return and depreciation allowance is to be earned. *Galveston Electric Co.* v. *City of Galveston*, 258 U.S. 388, 42 S. CT. 351, 66 L. Ed. 678; *San Diego Land & Town Co.* v. *Jasper*, 189 U.S. 439, 446, 447. 23 S. Ct. 571, 573, 574, 47 L. Ed. 892. The deficiency may not thus be added to the rate base for the obvious reason that *the hazard that the property will not earn a profit remains on the company* in the case of regulated, as well as an unregulated business. [Italics supplied]

The foregoing language of the court should be sufficient to dispel the notion that all return is a fixed cost. If return is not a fixed cost, it logically follows that income taxes, which are directly related to return, are likewise not a fixed cost.

It is reasonable to conclude, therefore, that the Applicants' fixed and variable method of cost classification has limited value in rate determination.

Concerning competition from other pipelines, the record indicates the Applicants serve a number of customers that purchase some portion of their gas requirements from other suppliers. Exhibit 39 lists such suppliers as Tennessee Gas Transmission Company, Texas Eastern Transmission Corp., Texas Gas Transmission Corp., and Transcontinental Gas Pipe Line Corp. This exhibit also shows the rate schedule prices of the contract demand schedules of United Fuel, Atlantic Seaboard and other Columbia companies in comparison with the corresponding rate prices in the schedules of the competing gas suppliers.

The witness sponsoring Exhibit 39, testified that the rate levels recommended by the Columbia companies, although deviating from Seaboard standards, do not recover as large a percentage of revenues in the demand component at 100% load factor as the rates of competing pipeline suppliers.

Such comparison of rates is of questionable value. In the absence of evidence showing the relative costs of purchased gas (the major cost item of every pipeline company), the differences in operations, load factors, etc., of the respective companies, the Examiner is not convinced that this exhibit is deserving of much weight.

The exhibit does show, generally speaking, that the demand charges in the rate schedules of the competing gas suppliers are higher and the commodity charges are lower than those proposed by United Fuel and Atlantic Seaboard in this proceeding. The comparison of rates seems to indicate that distributors served by either Applicant, as well as by other pipelines, will take high load factor purchases from competing pipelines and peak on the Applicants except in the case of United Fuel, where the 100% load factor price is lower than the price of competing pipelines in five out of the eight price listings.

The minimal amount of testimony in this case relating to competition from other pipelines is sufficient, however, since the Commission has had before it cases involving one or more of the Columbia companies in similar roles (*Central Hudson Gas & Electric Corporation, et al.* 14 FPC 544; *Lynchburg Gas Company,* 24 FPC 955, 1217; *Atlantic Seaboard Corporation, et al.* Opinion No. 368, issued November 27, 1962) and has determined that competition does, in fact, exist. The first two cases were proceedings under Section 7 of the Act and the issue of the level of competitive rates was not before the Commission. The third noted case arose through the filing of contract demand rate schedules for partial requirements customers by Atlantic Seaboard, Manufacturers, Kentucky Gas and Home Gas Company. In Opinion No. 368, the Commission recognized that competition existed and permitted the companies to file revised rate schedules for sales under their CDS-PR tariffs consistent with the terms and provisions set out in the opinion. The matter of rate deviation was not at issue in these proceedings. However, the Examiner notes that in Opinion No. 367, (*Natural Gas Pipeline Company of America,* Docket No. RP61-8) issued approximately one month earlier, the Commission with respect to competition stated,

> In the case before us, there are mitigating factors, for the record indicates 1) that Natural's distributor customers would stop taking substantial quantities of gas at rates exceeding 20.6¢ and 2) that substantial fixed costs are included in the commodity charge. [28 FPC at 734]

In view of the fact that the Commission has recognized the competitive position of Natural Gas Pipeline Company in relation to other suppliers to be a "mitigating circumstance" permitting deviation from Seaboard rates, and since circumstances are found to exist here, it is logical to conclude that a substantial ground for a rate deviation likewise prevails.

Based upon the record in this proceeding and the preponderance of the evidence, the Examiner concludes that a deviation from rates reflecting a strict or literal translation of Seaboard classification of costs is warranted by reason of the economic and operating factors heretofore considered. The circumstances in the instant case are not unlike those present in Opinion No. 379 (*Southern Natural Gas Company*, Docket Nos. G-20509 and RP60-15, February 18, 1963) where the Commission stated: [29 FPC 323 at 353]

> The exigencies of this case, and the responsibilities reposed in us by the Natural Gas Act, require that we make every effort to adopt a rate design which will retain a relatively high level of industrial sales in Southern's service area, without imposing a larger than necessary share of demand costs on low load factor distributors, and without unduly burdening the residential and commercial customers served by such distributors.

The Staff's conclusion that mitigating circumstances exist with respect to both Applicants, but particularly as to the prospective loss of sales by Atlantic Seaboard; coupled with the admission that the filed rates of Atlantic Seaboard have as a matter of historical record always been subjected to a certain degree of tilt, persuades the Examiner that a tilt is likewise justified in the present proceeding.

Staff's reason for recommending a tilt only in the case of Atlantic Seaboard does, however, seem inconsistent and without record justification. The evidence adduced in the course of the hearing relating to present and potential injury from competition certainly applies to both Applicants and there appears to be no logical reason to insist upon "Seaboard rates" for United Fuel and to sanction tilted rates for Atlantic Seaboard.

Staff's witness testified that a tilt of "three, four, five percent or something like that" is reasonable as to United Fuel and in view of the lack of evidence to the contrary, the Examiner agrees.

The rate deviations (commonly described as "tilt") found to be proper in the premises are not as great as those urged by the Applicants and the supporting interveners since, in the opinion of the Examiner, the weight of the evidence offered by such parties is insufficient to justify complete acceptance of their respective proposals.

On the other hand, proponents of Seaboard-type rates adopted more or less negative postures throughout the entire proceeding, restricted in the case of Washington, a low load factor customer, to achieving the lowest possible demand rate, and the Coal Interests, to enhancing the competitive market for their products.

The Examiner has in addition to the recommendations advanced by the respective litigants given careful consideration to the effect of the various rate proposals upon ultimate consumers, regardless of whether such consumers are residential, commercial, industrial, firm or interruptible in character, and it is his belief that rates deviating to a limited extent from inflexible and mathematically derived charges are indicated in this case. A tilt toward the demand component is required not only to retain the marginal interruptible sales that may be lost to competitive fuels, but to provide an incentive for all distributors to make additional sales, the cumulative effect of which will inure to the benefit of all consumers.

The actual deviation or tilt herein ordered for United Fuel is approximately 4.7 percent as measured by the excess collection through demand revenues over demand costs allocated in conformity with Seaboard procedures. The *effect* of the tilt, however, is not as drastic as it would first appear. Since a tilt adversely affects the lower load factor customers, the impact of the deviation ordered in the premises was calculated with respect to Ohio Valley Gas Company, United Fuel's lowest load factor customer. The resulting difference to Ohio Valley Gas Company which has a billing demand load factor of 34.8 percent,[7] is 0.31 cents per Mcf or 0.6 percent of the total average cost per Mcf.

With respect to the rates herein ordered for Atlantic Seaboard, the impact of the tilt upon Washington amounts to 0.62 cents per Mcf or 1.2 percent of the total average cost per Mcf, even though the tilt in rates for Atlantic Seaboard is 13.48 percent as commonly and, perhaps, misappropriately measured from a literal application of the Seaboard formula. The percentage of tilt is, therefore, nothing more than a guage or measuring stick and a number of instances have already been pointed out in this decision where the Commission has found that not all rate designs when measured with the Seaboard "yardstick" need be precisely 36 inches in length.[8]

In arriving at the rates hereinafter set forth, United Fuel's cost of service does not reflect a transfer of the Boldman Compressor Station from Atlantic Seaboard, but recognizes present ownership of such facility by the latter corporation. In Opinion No. 377 (*United Fuel Gas Company, Amere Gas Utilities Company, Atlantic Seaboard Corporation*, Docket No. CP61-107) dated January 16, 1963, the Commission established certain procedures to be followed by the Applicants upon final approval of the transfer of the Boldman Compressor Station and other properties which are not relevant to this proceeding. Since the transaction involving Boldman has not been finally approved, the Examiner feels that it would be improper to speculate upon its final outcome. Likewise, the Examiner deems it improper and contrary to the intent of the Natural Gas Act to include Boldman in the cost of service of both companies as suggested by the Applicants.

The Pennsylvania Public Utility Commission requested in its initial brief that Atlantic Seaboard's rates be reduced at least one cent per Mcf, effective January 1, 1963, to reflect the savings arising from the operations of the Terra Alta storage field.

In Opinion 373* (*Atlantic Seaboard Corporation*, Docket No. G-17774, issued December 28, 1962) the Commission found that substantial savings in Atlantic Seaboard's cost of service will not be reflected until the storage field can be operated at full capacity (estimated to be in 1965-66) and that it would be premature to attempt to determine what the import on Atlantic Seaboard's cost of service will be at that time.

The foregoing opinion of the Commission (issued shortly after the Pennsylvania Public Utility Commission filed its brief) is dispositive of the request and obviates the necessity for any further consideration thereof by the Examiner.

Further issues reserved by the Commission in its orders of December 29, 1961, February 19 and March 20, 1962 for decision by the Examiner in this proceeding concern (1) the manner in which the Applicants shall make refunds and reduce their rates in order to reflect the refunds and rate reductions which they in turn have received from their respective suppliers, and (2) the refunds and rate reductions which shall be made by the Applicants as a result of the transfer of the Boldman Compresser Station and pipeline KA-20 from Atlantic Seaboard to United Fuel.

The Applicants and the numerous interveners in this proceeding offer diverse views as to the proper method that should be used by United Fuel and Atlantic Seaboard in making refunds and rate reductions following similar action upon the part of the Applicants' suppliers. For example,

---

[7] Exhibit No. 69.

[8] In fact, the very rates approved by the Commission in Opinion 225 reflect a tilt of approximately 3.5 percent toward the demand component.

[*Opinion No. 373 printed at 28 FPC 1145; Opinion No. 377 at 29 FPC 90.]

Applicants and Commonwealth urge that such refunds and reductions be apportioned equally between the demand and commodity components and that the reduced rates of the Applicants be designed upon this evenly divided basis. Staff and Baltimore, however, recommend that refunds and reduced rates flow through to distributors precisely as received. Washington, on the other hand, contends that refunds and rate reductions must be consistent with costs and rates designed strictly in accord with the Seaboard formula. Other interveners suggest or imply that all refunds and reductions should flow through the commodity component only.

The Examiner is inclined to adopt the method recommended by Baltimore and the Staff of the Commission.[9] Insofar as the Applicants' position is concerned, it must patently be rejected since to hold otherwise would put the Examiner in the anomalous role of passing upon the propriety of matters previously approved by order of the Commission in other dockets. Furthermore, an equal division of the rate reductions or refunds received from an independent producer whose rates are stated as straight-line (commodity) rates would be a contradiction of the one element of cost classification that has been consistently followed by the Commission.[10] For similar reasons, the recommendation that any or all reductions flow through the commodity component is likewise objectionable.

Since the transfer of the Boldman Compressor Station has not received a final administrative imprimatur, the Examiner has, as in the case of proposed rates, considered the property to be vested in Atlantic Seaboard.

All matters having been fully considered, the following rates for the respective Applicants and for the periods indicated are deemed to be just and reasonable:

United Fuel

(Effective April 5, 1960)

Rate Schedule CDS-1	$2.01 Demand,	30.15¢ Commodity
Rate Schedule SGS-1		46.67¢ Commodity
Rate Schedule ES-1		46.67¢ Commodity
Rate Schedule AOS-1		36.76¢ Commodity

(Effective May 1, 1961)

Rate Schedule CDS-1	$2.01 Demand,	30.30¢ Commodity
Rate Schedule SGS-1		46.82¢ Commodity
Rate Schedule ES-1		46.82¢ Commodity
Rate Schedule AOS-1		36.91¢ Commodity

Atlantic Seaboard

(Effective April 5, 1960)

Rate Schedules CDS-1 and CDS-PR-1	$2.84 Demand,	32.00¢ Commodity
Rate Schedules CDS-2 and CDS-PR-2	$2.59 Demand,	30.30¢ Commodity
Rate Schedule OAS-1		41.34¢ Commodity
Rate Schedule OAS-2		38.81¢ Commodity

(Effective May 1, 1961)

Rate Schedules CDS-1 and CDS-PR-1	$2.86 Demand,	32.16¢ Commodity
Rate Schedules CDS-1 and CDS-PR-2	$2.61 Demand,	30.46¢ Commodity
Rate Schedule OAS-1		41.56¢ Commodity
Rate Schedule OAS-2		39.04¢ Commodity

---

[9] It is, of course, contemplated that the Applicants will take into account any and all interim refunds made by them.

[10] The Examiner has not been able to find any case wherein the Commission has classified purchased gas cost in part to commodity and in part to demand when the gas was bought at a straight-line rate.

Rate Schedules IS-1 and IS-2 of Atlantic Seaboard's tariff as of April 5, 1960, the date on which the revised rates of Atlantic Seaboard were put into effect by Commission order, were not proposed to be changed. The Examiner makes no findings with respect to these rates since service has never been rendered thereunder and no basis exists upon which to make a determination as to whether or not such rate levels are just and reasonable.

With respect to the issue of United Fuel's depreciation rates applicable to its underground storage, transmission properties and the Kenova Extracting Plant, the record indicates that the Applicant raised such rates effective as of July 1, 1957, almost three years before the increase in rates and charges involved in this matter were initiated.

The Examiner, therefore, is inclined to consider the absence of any reference in the Commission's Order of March 20, 1962 to the changed depreciation rates or the effect of such changes prior to the period beginning April 5, 1960, to be significant. Of further significance is the fact that no exception was taken to such order by any party to this proceeding.

Lynchburg citing Section 9(a) of the Natural Gas Act, claims that any change in authorized depreciation rates is subject to redetermination by the Commission, and that only a prescribed rate of depreciation may be included in a cost of service.

This contention, however, appears to be at variance with actual Commission practice. The import of Exhibit 6, as understood by the Examiner, is that the Commission does not prescribe depreciation rates for the natural gas companies subject to its jurisdiction. Paragraph five of this exhibit states, in substance, that the determination of annual depreciation is a matter for the exercise of independent judgment by the individual companies in the light of their peculiar circumstances.

It would seem, therefore, that United Fuel exercised a legitimate prerogative of management in initiating changes in its depreciation accrual rates in order to maintain an adequate reserve.

Since the evidence introduced by United Fuel in support of the reasonableness of its depreciation accrual rates stands unchallenged by the parties, the Examiner must conclude that such depreciation rates are, in fact, just and reasonable in the circumstances.

Atlantic Seaboard urges that the use of the heat content adjustment provision in its contract demand rate schedules be continued without change or modification since this provision was accepted by the Applicant, its customers and the Staff pursuant to a settlement conference and became effective on April 5, 1960, along with the Applicant's proposed rates.

Roanoke claims, however, that the provision is prejudicial since, as demonstrated by Exhibit 44, it results in unjustified differences in rates as between localities served by Atlantic Seaboard.

Lynchburg objects to the provision upon two grounds: one, that the month to month varying of Btu content causes operating difficulties and two, since it receives the highest Btu gas of any customer of Atlantic Seaboard, it has to pay the highest effective demand charge.

The Staff did not challenge the continuance of the provision in the form as reserved for hearing in Commission Order of December 29, 1961, but now proposes an insignificant modification thereof.

In Opinion No. 225, *supra*, the Commission ordered the inclusion of a heat content adjustment provision in the rate schedules of Atlantic Seaboard because of the difference in the Btu content of gas transported in the company's 20 and 26-inch pipelines. Since Exhibit 36 shows that a difference, although to a lesser degree, continues to exist in the richness of the gas passing through the respective lines, there appears to be sufficient reason to warrant the continuance of the provision.

Contrary to the proposition advanced in this proceeding that the heat adjustment clause promotes inequities, it would seem that such provision has the effect of equalizing rates. Roanoke's witness, when asked in the course of cross-examination with respect to Exhibit 44 if it is not a fact, from the point of view of thermal content, that each of the customers shown thereon is paying the same price, namely 32-1/2 cents per therm, replied that such a conclusion would appear to be true.

Since the form of provision was agreed to by all parties at the settlement conference prior to April 5, 1960, and since the fluctuation it was designed to compensate while considerably reduced continues to exist, there appears to be no persuasive reason to dispense with or, as the Staff proposes, to modify the current adjustment clause so long as the need for equalization of rates remains.

The stipulated cost of service between the parties was not dispositive of the normalized tax treatment accorded accelerated depreciation under Section 167 of the Internal Revenue Code; the tax treatment accorded statutory depletion and intangible productive well-drilling costs or the matter concerning a possible refund of the Texas Severance Beneficiary Tax.

The record is barren, however, of any evidence concerning these reservations; consequently, the Examiner has no basis for making any findings with respect thereto.

Additional Findings and Conclusions

Upon consideration of the entire record and the briefs filed in this proceeding, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) United Fuel Gas Company and Atlantic Seaboard Corporation are separately and severally engaged in the transportation and sale of natural gas in interstate commerce for resale; each corporation is a "natural-gas company" subject to the provisions of the Natural Gas Act and the rates and charges of these Applicants are subject to the jurisdiction of the Federal Power Commission.

(2) The increased rates and charges of United Fuel Gas Company contained in Second Revised Sheets Nos. 8 and 9, Fourth Revised Sheets Nos. 7, 27, and 33, and Fifth Revised Sheet No. 22 to its FPC Gas Tariff, Fifth Revised Volume No. 1, which were made effective April 5, 1960, by Commission order of May 6, 1960, in Docket No. G-20270 are excessive, and therefore, unjust, unreasonable and unlawful.

(3) The amounts by which the rates and charges found in Finding (2) to be unlawful exceed the rates and charges heretofore determined to be just and reasonable should be refunded by United Fuel Gas Company to its utility customers together with interest thereon at 7% per annum, provided, however, that there shall be deducted from the principal and interest so computed separately for each utility customer the interim refund principal and interest made to the respective utility customers under Commission order of September 14, 1962, approving agreements and granting motions to make interim refunds.

(4) The depreciation accrual rates presently being booked by United Fuel Gas Company applicable to its underground storage and transmission proper-

ties, and its Kenova Extraction Plant are just and reasonable and are appropriate components of its cost of service and are hereby approved.

(5) The increased rates and charges of Atlantic Seaboard Corporation contained in Third Revised Sheets Nos. 8, 9, 13, 14, 16C, 16D, 17C and 17D, Fourth Revised Sheets Nos. 7, 12, 16A, 17A, 26 and 28 and Fifth Revised Sheets Nos. 22 and 24 to its FPC Gas Tariff, Seventh Revised Volume No. 1, which were made effective April 5, 1960, by Commission order of April 26, 1960, in Docket No. G-20272 are excessive, and therefore, unjust, unreasonable and unlawful.

(6) The change in rates and charges of Atlantic Seaboard Corporation contained in Second Revised Sheets Nos. 10, 15, 16F and 17F, and Original Sheets Nos. 10A, 15A, 16G and 17G to its FPC Gas Tariff, Seventh Revised Volume No. 1, which were made effective April 5, 1960, by Commission order of January 10, 1961 are just and reasonable.

(7) The amounts by which the rates and charges found in Finding (5) to be unlawful exceed the rates and charges heretofore determined to be just and reasonable should be refunded by Atlantic Seaboard Corporation to its utility customers together with interest thereon at 7% per annum, provided, however, that there shall be deducted from the principal and interest so computed separately for each utility customer the interim refund principal and interest made to the respective utility customer under Commission order of September 14, 1962, approving agreements and granting motions to make interim refunds.

(8) There appears to be no record justification for the removal or modification of the heat content adjustment provision in the demand charge in Rate Schedules CDS-1, CDS-2, CDS-PR-2 of Atlantic Seaboard Corporation and its continued inclusion in such schedules is hereby approved.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission that:

(A) The increased rates and charges of United Fuel Gas Company contained in Second Revised Sheets Nos. 8 and 9; Fourth Revised Sheets Nos. 7, 27 and 33, and Fifth Revised Sheet No. 22 to its FPC Gas Tariff, Fifth Revised Volume No. 1, which were made effective April 5, 1960, are hereby disallowed.

(B) Within thirty days of the time when this Decision becomes the official action of the Commission, United Fuel Gas Company shall file tariff sheets in substitution for those disallowed, containing the rates and charges found to be reasonable and proper herein.

(C) Within sixty days of the time when this Decision becomes the official action of the Commission, United Fuel Gas Company shall refund to its utility customers with interest thereon at 7% per annum, the amounts by which the rates and charges found in Paragraph A to be unlawful exceed the rates and charges heretofore determined to be just and reasonable, provided, however, that there shall be deducted from the principal and interest so computed separately for each utility customer the interim refund of principal and interest made to the respective utility customers under Commission order of September 14, 1962.

(D) Within thirty days after making the refunds provided for herein, United Fuel Gas Company shall report to the Commission, in writing and under oath, the amount of the refunds made to each of its utility customers, showing separately the amount of principal and interest so paid, the billing determinants or other basis used for such determination and shall serve a copy of such report upon each of the customers receiving a refund.

(E) The depreciation accrual rates presently being booked by United Fuel Gas Company with respect to its underground storage transmission properties, and its Kenova Extraction Plant are approved for use by company.

(F) The increased rates and charges of Atlantic Seaboard Corporation contained in Third Revised Sheets Nos. 8, 9, 13, 14, 16C, 16D, 17C and 17D; Fourth Revised Sheets Nos. 7, 12, 16A, 17A, 26 and 28, and Fifth Revised Sheets Nos. 22 and 24 to its FPC Gas Tariff, Seventh Revised Volume No. 1, which were made effective April 5, 1960, are hereby disallowed.

(G) Within thirty days of the time when this Decision becomes the official action of the Commission, Atlantic Seaboard Corporation shall file tariff sheets in substitution for those disallowed, in accordance with the rates and charges found to be reasonable and proper herein.

(H) Within sixty days of the time when this Decision becomes the official action of the Commission, Atlantic Seaboard Corporation shall refund to its utility customers with interest thereon at 7% per annum, the amounts by which the rates and charges found in Paragraph (F) to be unlawful exceed the rates and charges heretofore determined to be just and reasonable, provided, however, that there shall be deducted from the principal and interest so computed separately for each utility customer the interim refund of principal and interest made to the respective utility customers under Commission order of September 14, 1962.

(I) Within thirty days after making the refunds provided for herein, Atlantic Seaboard Corporation shall report to the Commission, in writing and under oath, the amount of the refunds made to each of its utility customers, showing separately the amount of principal and interest so paid, the billing determinants and shall serve a copy of such report upon each of the customers receiving a refund.

(J) The heat content adjustment provision in the demand charge in Rate Schedules CDS-1, CDS-2, CDS-PR-2 of Atlantic Seaboard Corporation shall continue to be included in such rate schedules without modification.

Ames W. Williams,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.

ORDER PERMITTING INTERVENTIONS

(Issued June 4, 1964)

Pursuant to the Commission's order instituting these proceedings, 30 FPC 1354, issued November 27, 1963, timely petitions and notices to intervene were filed on or before January 2, 1964, except where noted, by the persons named in the following intervener categories:

I. The following state commissions filed notices of intervention under Section 1.8 of our Rules of Practice and Procedure:

Public Service Commission of the State of New York.
Public Service Commission of Wisconsin.
Michigan Public Service Commission.
Iowa State Commerce Commission.

The People of the State of California and the Public Utilities Commission of the State of California.

Pennsylvania Public Utility Commission.

Georgia Public Service Commission.[1]

II. States filing petitions to intervene:

State of Texas.

State of Wisconsin.

III. Others filing petitions to intervene:

Central Illinois Public Service Company.

Iowa-Illinois Gas & Electric Company.

The Peoples Gas Light and Coke Company.

Pacific Lighting Gas Supply Company.

Southern California Gas Company.

Southern Counties Gas Company of California.

Central Hudson Gas & Electric Corporation.

Elizabethtown Consolidated Gas Company

New York State Electric & Gas Corporation.

Pennsylvania Gas and Water Company.

Piedmont Natural Gas Company, Inc.

Rochester Gas and Electric Corporation.

South Jersey Gas Company.

Trunkline Gas Company.

The East Ohio Gas Company.

Hope Natural Gas Company.

Lake Shore Pipe Line Co.

New York State Natural Gas Corporation.

The Peoples Natural Gas Company.

The River Gas Company.

The United Gas Improvement Company.

Transcontinental Gas Pipe Line Corporation.

Pacific Gas & Electric Company.

Niagara Mohawk Power Corporation.

Lone Star Gathering Company.

Central Illinois Light Company.

Iowa Power and Light Company.

Southwest Kansas Royalty Owners Association.

Consolidated Edison Company of New York, Inc.

Orange and Rockland Utilities, Inc.

Natural Gas Pipeline Company of America.

Philadelphia Electric Company.

Philadelphia Gas Works Division of The United Gas Improvement Company.

Northern Illinois Gas Company.

Public Service Electric and Gas Company.

Long Island Lighting Company.

United Gas Pipe Line Company.

Brooklyn Union Gas Company.

Texas Independent Producers and Royalty Owners Association.

Independent Petroleum Association of America.

Illinois Power Company.

Iowa Public Service Company.

United Fuel Gas Company.

---

[1] The notice of intervention was filed February 14, 1964.

American Public Gas Association consisting of gas distributors within the States of Alabama, Arkansas, Colorado, Connecticut, Georgia, Illinois, Indiana, Iowa, Kansas Kentucky, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, and Washington.

The Berkshire Gas Company.
Boston Gas Company.

---

[2] The petition to intervene was filed on January 8, 1964.

[3] The petition to intervene was filed on January 13, 1964.

[4] The petition to intervene was filed on February 11, 1964.

On January 30, 1964, the Secretary of the Commission sent to all respondents a list of the names and addresses of those who had filed notices and petitions for intervention. Concurrently, the Commission issued an order providing for, among other things the filing of answers to the petitions to intervene. On February 26, 1964, Hunt Oil Company filed an answer opposing The United Gas Improvement Company's petition to intervene; Hunt argues that UGI failed to aver that its interests in the proceeding would not be adequately represented by existing parties. We shall grant UGI's petition to intervene.

On February 28, Hunt Oil Company also filed an answer opposing the intervention petitions of several gas distributing companies in Iowa, Illinois and California and opposing the notice of intervention of The People of the State of California and the Public Utilities Commission of the State of California. On March 2, Gulf Oil Corporation, *et al.*, filed an answer likewise opposing these interventions. On March 2, Sun Oil Company filed an answer similarly opposing the intervention of California and the California gas companies. Essentially, Hunt, Sun and Gulf, *et al.* oppose the stated interventions on the grounds that gas produced from the Texas Gulf Coast area does not reach Iowa, Illinois, or California.

We shall permit all these interventions. We are satisfied that during the developmental period of area rate making the Commission should have available to it all the relevant evidence bearing upon the evolution of principles involved in the establishment of just and reasonable rates. Without determining whether the various petitioners have a right to intervene, we shall in the exercise of our discretion under Section 15 (a) of the Natural Gas Act permit these interventions. Some may consider this disposition to be inconsistent with our denial of a petition to intervene in the *Permian Basin* case.[4] However, our further experience has now demonstrated that the denial unnecessarily deprived the Commission of the active participation of groups which, according to past performance, can be counted on to make contributions toward solving the complex problems inherent in area rate proceedings, and permitting such interventions should not delay the proceeding. See Area Rate Proceeding, *et al.*, Docket No. AR64-1, *et al.*, Order Permitting Interventions, issued April 8, 1964, 31 FPC 888.

As noted, four intervention pleadings were filed after January 2, 1964, the stated deadline for intervention filings. It does not appear that the tardiness of these pleadings will delay the proceedings or inconvenience any of the parties. In light of our decision broadly to permit intervention, no useful purpose would be achieved by delaying positive action on the late pleadings. Accordingly we now accept the late filings and permit the interventions.

The Commission orders:

Subject to the rules and regulations of the Commission, all the petitioners and State Commissions named hereinabove are permitted to intervene in these consolidated proceedings and to participate on a joint or individual basis. *Provided, however*, that the participation of such interveners shall be limited to matters affecting asserted rights and interests specifically set forth by said petitioners in their petitions and *Provided, further*, that the admission of said petitioners as interveners shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders of the Commission entered in these proceeding.

OPINION NO. 424-A

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-26; WARRIOR RIVER NATURAL GAS DISTRICT, DOCKET NO. CP63-70; GULF OIL CORPORATION, DOCKET NO. CI63-123; HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI63-129

MEMORANDUM OPINION AND ORDER DENYING APPLICATION FOR REHEARING, REJECTING MOTION FOR ACCEPTANCE OF COMMITMENT OFFERED IN SATISFACTION OF CERTIFICATE CONDITIONS, APPROVING CONTINGENT REFUND PROCEDURE AND AMENDING CONDITIONS

(Issued June 4, 1964)

Syllabus

1. Record establishes that any burden which might result from certification of extension, will not be undue or excessively stringent and is more than outweighed by public need in area involved. P. 1388.
2. Agreement between pipeline and distributor that pipeline first construct extension, after which distributor will submit contract or make required contribution, does not meet condition of paragraph (B) of prior order. P. 1388.
3. It is neither equitable nor desirable to provide condition for protection of existing customers during construction period and then permit use of substitute method depriving them of such protection. P. 1388.
4. Commission *denies* application for rehearing; *amends* prior order as provided herein; and in all other respects *confirms* said order. P. 1389.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

On May 5, 1964, Carolina Pipeline Company filed an application for rehearing of our Opinion No. 424 and accompanying Order issued April 6, 1964, 31 FPC 789, in the captioned proceedings. No other applications for rehearing have been submitted. Carolina's objections are concerned entirely with the certificate granted to Southern Natural for the construction and operation of the southeast Georgia extension as proposed in the application. It contends that the Commission has authorized the construction of excessive and uneconomic facilities; that the record does not support the findings of a reasonable prospect of economic feasibility; that the facilities are oversized; and that further industrial contracts and/or contributions in aid of construction should be required.

The review of the application for rehearing discloses no matters with which the Commission was not fully cognizant when it issued its Opinion and Order nor which, upon reconsideration, warrant any change in or modification of such Order, except as hereinafter indicated. As stated in the Opinion, it is the policy of the Commission to encourage the extension of branch lines by pipelines for the purpose of filling in existing service areas provided that such extensions can reasonably be undertaken and on condition that no *undue* burden is thereby placed on the existing customers. The evidence clearly establishes that Southern's estimated system rate of return, after construction of the extension and the inclusion of the costs and revenues associated therewith, will be substantially in excess of the rate of return authorized in Opinion No. 379, its last major rate case. Assuming reasonable assurance that the branch line will not continue to operate in a deficit condition, then, as further stated, ". . . the fact that the authorization by initially reducing overall company return may tend to defer or diminish a possible reduction in rates by the company to its existing customers does not, standing alone, constitute grounds for denial of the certificate." The risk of deficit operation, while never completely eliminated, has been minimized in this case in the condition regarding the intended sale to Brunswick Pulp and Paper Co. In our opinion no further restrictions in the certificate are required to safeguard the interest of Southern's customers. Whether or not Carolina will sustain a "burden" from the certificate, either in the sense of a deferred or diminished rate reduction or its inability to procure the large volumes of interruptible gas it desires, is not wholly decisive. The record does establish that any burden which might result will not be undue or excessively stringent and is more than outweighed by the need of the public in the area involved.

On April 28, 1964, Southern filed a motion seeking the Commission's acceptance of an appended agreement between itself and Atlanta Gas Light Company as satisfactory compliance with paragraphs (B) and (C) of the Order accompanying Opinion No. 424. The substance of the agreement is that Southern will *first* construct the southeast Georgia extension and *then* Atlanta will either submit a contract with Brunswick or make the required contribution. Because the city of Vidalia does not have legal authority at this time to make the alternative contribution in aid of construction of $46,023, the agreement proposes that Atlanta will advance this amount on behalf of the city. The reason given by Southern for requesting that the "commitment" to perform be considered identical with performance is that Southern will be able to begin immediate construction of the extension so as to have it completed in time for the next heating season, while at the same time allowing Atlanta an opportunity to negotiate the contract with Brunswick.

In our opinion the commitment cannot be accepted as compliance with the requirements of the Order. Paragraph (B) clearly states that Southern is authorized to construct the extension sought by it provided it first obtains the contract or customer contribution. A commitment to submit a contract or make a contribution after the extension has been constructed does not accord with the terms of the condition. The contribution as an alternative to the signed contract was inserted to balance the equities between the people in southeast Georgia who desire natural gas service and Southern's existing customers whose rates could be adversely affected by Southern's construction of the extension without assurance that the Brunswick sale will be made. To provide for a condition to protect existing customers and then to permit use of a substitute method which leaves the customers without that protection while the extension is being constructed is neither equitable nor desirable. Accordingly, we shall continue to require that either the contract be submitted or contribution made before construction is undertaken. To the extent that the proffered agreement departs therefrom, the motion will be denied.

Southern's motion indicates that Atlanta desires to have the plan or refund of contributions required by paragraph (C) settled at this time. They request that the paragraph be so interpreted as to allow Southern to commence refunding the contribution on a pro rata basis at such time or times as the annual volume of sales on the southeast Georgia extension is in excess of 5,287,509 Mcf, the total 8,937,509 estimated third-year sales from the extension less the 3,650,000 third-year estimated sales to Brunswick. Although paragraph (C), as ordered, envisions that the refund would be calculated at the end of the first three years of operation, we have no objection to a proportionate refund at the end of each of the three years, as stated in the agreement, based on the sales during the preceding twelve months. Paragraph (C) of the Order will be amended to provide for this procedure.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the application of Carolina Pipeline Company present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 424 and Order or which, having now been considered, warrant any change in or modification of said Opinion and Order, except as specified below.

(2) To the extent that the motion by Southern, hereinabove referred to, would permit construction of the southeast Georgia extension prior to the submission of the contract or payment of the contribution required in paragraph (B) of the Order accompanying Opinion No. 424, such motion should be denied.

The Commission orders:

(A) The application for rehearing filed by Carolina Pipeline Company on May 5, 1964, is denied.

(B) The motion filed by Southern Natural Gas Company, to the extent that it would permit construction of the southeast Georgia extension prior to the submission of the contract or payment of the contribution required in paragraph (B) of the Order accompanying Opinion No. 424, is denied.

(C) Paragraph (C) of the Order accompanying Opinion No. 424 is amended to provide:

(C) At the end of the first 12-month period following the date of first rendering service from the southeast Georgia extension, and at the end of the next two succeeding years thereafter, Southern shall file with the Commission a statement showing the actual volumes delivered on the extension during the previous 12-month period and associated revenues compared with the estimates originally presented in this proceeding. If actual sales exceed an annual volume of 5,287,509 Mcf, Southern shall refund to Atlanta that portion of the contribution theretofore made not previously refunded in the proportion that the excess of sales above 5,287,509 Mcf bears to 3,650,000 Mcf. Southern shall not be obligated to pay interest on the contribution when refunded.

(D) In all other respects said Opinion and Order is confirmed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-175

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 4, 1964)

On February 3, 1964, as supplemented on March 11, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-175 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the modification of certain facilities to enable Applicant to increase its daily sales and deliveries of natural gas from 4,500 Mcf to 20,000 Mcf to the City of Willcox, Arizona, for resale to Arizona Electric Power Cooperative, Inc. (AEPCO) for use as fuel by AEPCO at its Cochise electric generating plant, all as more fully set forth in the application, as supplemented.

Specifically, Applicant proposes to increase the capacity of its existing measuring and regulating station in Cochise County, Arizona, by the removal of two positive meters and by the installation of dual 6-5/8-inch O.D. orifice-type meter run, together with the necessary appurtenances.

The estimated cost of the proposed facilities is $12,700, which cost will be financed out of current working funds.

Applicant states that the increased power requirements prompting installation of the additional facilities are occasioned by both normal growth in the area served directly by AEPCO and large-volume electric sales proposed to be made by AEPCO to Salt River Project Agricultural Improvement and Power District which serves electricity in Maricopa, Gila and Pinal Counties, Arizona.

By letter dated May 14, 1964, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Deliveries of natural gas to the City of Willcox, Arizona, at the subject station, as hereinafter authorized, should not exceed 20,000 Mcf of gas per day.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

(D) Deliveries of natural gas to the City of Willcox, Arizona, at the subject station, as hereinabove authorized, shall not exceed 20,000 Mcf of gas per day.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-270; GEORGIA-TENNESSEE GAS CORPORATION, DOCKET NO. CP64-272

ORDER DENYING PETITION FOR WAIVER OF REGULATIONS AND CONDITIONALLY ACCEPTING CERTIFICATE APPLICATION

(Issued June 4, 1964)

Transcontinental Gas Pipe Line Corporation (Transco), on May 8, 1964, submitted for filing an application pursuant to Section 7(c) of the Natural Gas Act together with a petition pursuant to Section 1.7(b) of the Commission's Rules of Practice and Procedure requesting partial waiver of Part 157 of the Commission's Regulations under the Natural Gas Act, as amended by Order No. 280 issued March 31, 1964, 31 FPC 754. Specifically Transco requests that it be excused from complying with the requirements of Section 157.14(a) (10), Exhibit H which concerns gas reserve and deliverability data. These data, under the Regulations, as amended, are required to be submitted in conformity with the newly promulgated FPC Form No. 15,[1] Annual Report of Gas Supply as a part of any certificate application filed subsequent to May 1, 1964, and prior to July 1, 1964.

Under the terms of Order No. 279, natural-gas pipeline companies, other than applicants filing certificate applications between May 1 and July 1, 1964, must file FPC Form 15, Annual Report of Gas Supply on July 1, 1964 and annually thereafter. The filing of Form 15 each year will obviate the necessity of pipeline companies submitting complete gas supply and deliverability data with each individual certificate application filed with the Commission.

In its petition for waiver, Transco states that its application for certificate had been prepared in final form under the Commission's Regulations in effect prior to May 1, 1964, because at the time of preparation it was fully anticipated that the application would be filed prior to May 1, 1964, the effective date of Order No. 280. Due, however, to circumstances beyond its control, Transco states further, that it was not possible to file the application prior to May 1. Transco alleges that it would be unnecessarily burdensome for it to file the gas supply and deliverability data as required by the Commission's Regulations as amended. It, therefore, requests that the requirements of the new part of Part 157 of the Commission's Regulations, as promulgated by Order No. 280 issued March 31, 1964, be waived in order to permit the filing of its application.

Order Nos. 279 and 280 were adopted and issued with the purpose of aiding the pipeline companies by eliminating the necessity for their filing gas supply and deliverability data as a part of each individual certificate application. However, it is obvious that there will be a transition period during which pipeline companies who have applications in process of preparation may experience difficulty in attempting to conform to the new regulations during the period from May 1, the effective date of the new regulations, and July 1, when the first of the newly prescribed Form 15, Annual Report of Gas Supply, is to be filed by each pipeline company. We, however, do not feel that this constitutes a reasonable ground for waiving the requirements of the Regulations in situations like this one where another pipeline is contesting.

---

[1] See Order No. 279, issued March 31, 1964, 31 FPC 750.

To ameliorate the situation, however, we will accept Transco's certificate application for filing on the condition that Transco file on or before July 1, 1964, Form No. 15, Annual Report of Gas Supply, as required by the Commission's Regulations as amended by Order No. 280. This same treatment will be accorded to other pipeline companies which may file applications competitive with that filed by Transco.

Conditionally accepting the application for filing will enable the staff and others, who may become parties to the proceeding, to begin analysis and evaluation of the application and may expedite the ultimate disposition thereof.

Georgia-Tennessee Gas Corporation (Georgia-Tennessee) on May 8, 1964, filed an application interdependent upon the application of Transco. Inasmuch as Transco's application is being conditionally accepted for filing, the Georgia-Tennessee's application should be conditionally accepted for filing subject to compliance by Transco with the condition upon which its application is permitted to be filed.

The Commission orders:

(A) The petition for waiver of regulations filed by Transco on May 8, 1964, be denied.

(B) The application for a certificate of public convenience and necessity filed by Transco on May 8, 1964, be accepted for filing upon condition that on or before July 1, 1964, Transco file with the Commission Form 15, Annual Report of Gas Supply, as required by Part 157 of the Commission's Regulations under the Natural Gas Act, as amended by Order No. 280 issued March 31, 1964.

(C) The interdependent application for a certificate of public convenience and necessity filed by Georgia-Tennessee on May 8, 1964, be accepted for filing subject to compliance by Transco with the condition specified in Paragraph (B) hereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PUGET SOUND POWER & LIGHT COMPANY AND PUBLIC UTILITY DISTRICT NO. 1 OF CHELAN COUNTY, WASHINGTON, PROJECT NO. 943; PUBLIC UTILITY DISTRICT NO. 2 OF GRANT COUNTY, WASHINGTON, PROJECT NO. 2114

ORDER APPROVING PROGRAM FOR FISH PASSAGE

(Issued June 4, 1964)

Paragraph (C) of the Commission's order of October 24, 1962, directing certain modifications of fishways at the Rock Island Dam requires that the licensees for Project No. 943, and for Project No. 2114, cooperate to develop, in cooperation with the Department of the Interior and the Washington State Department of Fisheries and Game, a program of study and evaluation of the further effects of encroachment of the Wanapum reservoir on fish passage at the Rock Island Dam, and that such program be submitted for Commission approval.

Public Utility District No. 1 of Chelan County, Washington by its letter of January 31, 1964, forwarded a copy of an agreement entitled "A Program To Evaluate Fish Passage Facilities At Rock Island Dam", which had been derived pursuant to Paragraph (C) of the Commission's order of October 24, 1962. This agreement which provides for procedures of study and evaluation, designation of personnel to conduct the work, reports to be prepared, and financing is executed by officials of Public Utility District No. 2 of Grant County, Washington, the Department of the Interior, Bureau of Commercial Fisheries, and the Washington State Department of Fisheries and the Department of Game.

Public Utility District No. 1 of Chelan County, Washington conditioned its acceptance of the agreement on approval by the other parties of two additional paragraphs. Approval of these additional paragraphs was received by the Commission from Public Utility District No. 2 of Grant County, Washington by letter of March 16, 1964, from Washington State Department of Game by letter of March 17, 1964, from the Department of the Interior, Bureau of Commercial Fisheries by letter of March 18, 1964, and from Washington State Department of Fisheries by letter of March 24, 1964.

The Commission finds:

The program proposed in the agreement is consistent with the purposes of Paragraph (C) of the Commission's order of October 24, 1962.

The Commission orders:

(A) The program proposed in the agreement of the parties entitled "A Program To Evaluate Fish Passage Facilities At Rock Island Dam" is approved.

(B) Nothing in this order is to be construed as full compliance with Paragraph (C) of the Commission's order of October 24, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 991

ORDER ACCEPTING SURRENDER OF LICENSE (TRANSMISSION LINE)

(Issued June 4, 1964)

Application was filed on September 23, 1963, by Southern California Edison Company, licensee for transmission line Project No. 991, for surrender of its license for the project, affecting lands of the United States in San Bernardino County, California.

The line has been relocated and is now being operated on United States lands under a permit issued by the Department of the Interior. Annual charges under the Commission license for the line have been paid through December 31, 1962, and the licensee's copy of the license has been returned to the Commission.

As described in the license, Project No. 991 consists of an 11,000-volt, woodpole line 1,950 feet long. The line is operated as a distribution facility which receives all of its power from a 33 kilovolt transmission system of Applicant.

The Commission finds:

(1) The subject line is not part of a "project" within the meaning of Section 3(11) of the Federal Power Act and, therefore, is not subject to the licensing authority of the Commission.

(2) Acceptance of surrender of the license for transmission line Project No. 991 is appropriate.

The Commission orders:

Surrender of the license for transmission line Project No. 991 is hereby accepted effective as of December 31, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

MERCED IRRIGATION DISTRICT, PROJECT NO. 2179

ORDER MODIFYING ORDER ON REHEARING

(Issued June 4, 1964)

On May 6, 1964, Merced Irrigation District (Applicant) filed application for rehearing for the purpose of clarifying two matters in the Commission's order issued April 8, 1964, issuing a license to Applicant for proposed Project No. 2179, known as the Exchequer Hydro-Electric Development, to be located on Merced River, County of Mariposa, California.

Applicant states that in Article 38 of the license order, the meaning of the word "cost" in line 17 (page 8, line 6 of the order) is not clear and urges that, for purposes of clarification, we insert the word "annual" before the word "cost". Applicant believes the word should relate to annual costs of operation and maintenance. Since the word "cost" as used in Article 38 is broad enough to include annual costs of operation and maintenance there appears to be no need to modify that Article.

Applicant advised that the text of Article 44 of the license order is almost identical with Paragraph IV of its agreement with the California Department of Fish and Game for the protection of fish and wildlife, except that the article omits the qualifying phrase "consistent with operational demands" which appears in the agreement. Applicant also urges that we insert in line 1 of the article, after the words "The Licensee shall", the phrase "make every reasonable effort to". We agree that the Applicant's duty to maintain the water surface of the Exchequer Reservoir as high as possible from April through October should be qualified to make provision for possible conflicts in operational demand during those months. Therefore, we are revising Article 44 substantially as requested.

The staff suggests that the phrase "to maintain previously recommended minimum streamflow" in Article 44 be changed to read, "to maintain minimum streamflow as required by Article 40". This change is desirable because the "previously recommended" minimum streamflow is in fact the minimum streamflow specified in Article 40 of the License order.

Upon consideration of the aforesaid application, *the Commission finds:*

It is appropriate and consistent with the public interest that our order issued April 8, 1964 in Project No. 2179 be modified as hereinafter provided.

The Commission orders:

(A) Article 44 of the April 8, 1964 order is hereby modified to read as follows:

Article 44. The Licensee shall make every reasonable effort to maintain the water surface elevation of Exchequer Reservoir as high as possible from April through October consistent with the primary purposes of the reservoir and shall maintain a minimum pool of not less than 115,000 acre-feet in Exchequer Reservoir except for a drawdown as necessary to maintain minimum streamflow as required by Article 40.

(B) The afore-mentioned Commission order issued April 8, 1964, as amended by this order, shall be accepted by the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

K-B COMPRESSION COMPANY, INC. (OPERATOR), DOCKET NO. RI60-247

ORDER DENYING OFFER OF SETTLEMENT

(Issued June 4, 1964)

K-B Compression Company, Inc. (Operator) (K-B) has filed an Offer of Settlement pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. The proceeding in Docket No. RI60-247 relates to the jurisdictional sale of natural gas under its FPC Gas Rate Schedule No. 2 to Lone Star Gas Company in Stephens County, Oklahoma (Oklahoma "Other" area). The proposed favored-nation rate increase from 11¢ to 16.8¢ per Mcf at 14.65 psia, designated as Supplement No. 4 to K-B's FPC Gas Rate Schedule No. 2, was suspended and subsequently became effective subject to refund on April 10, 1961.

In its offer, K-B proposes a settlement rate of 12¢ per Mcf, and that it make partial refund of the monies collected subject to refund. K-B also states it is willing to accept a moratorium on rate increases until 1968, and to waive its right to invoke any indefinite pricing and take-or-pay-for provisions in the contract.

K-B assigned its interest in the sale involved herein to Pan American Petroleum Corporation (Pan American), effective on June 24, 1963. By order issued November 12, 1963, in Docket No. CI64-401, Pan American was permitted to abandon the sale because of an unitization agreement, the effect of which was to discontinue the sale under this rate schedule. Pan American has not concurred in K-B's offer for the period subsequent to June 24, 1963. Consequently, the proceeding in Docket No. RI60-247; insofar as it relates to K-B, involves a "locked-in" period from the date of the effectiveness of the rate subject to refund, to the date of assignment to Pan American.

Under the Seventh Amendment to the Policy Statement (Order No. 273 issued November 27, 1963) a producer may receive a 12.0¢ rate for sales from the area involved here if it eliminates all price escalation clauses from its rate schedule. The purpose of the Seventh Amendment is to stabilize the price of gas in the future. The end sought by the policy statement cannot be attained here because sales are no longer made from K-B's properties. K-B would thus be relinquishing nothing in exchange for the proposed 12.0¢ rate. Accordingly, it is not in the public interest to approve K-B's offer.

The Commission finds:

It is necessary and proper in carrying out the provision of the Natural Gas Act and the Regulations thereunder to deny K-B's Offer of Settlement.

The Commission orders:

The Offer of Settlement filed by K-B in this proceeding is denied.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63-346

ORDER PERMITTING WITHDRAWAL OF APPLICATION AND TERMINATING PROCEEDING

(Issued June 5, 1964)

On April 29, 1964, Florida Gas Transmission Company (Applicant) filed a notice of withdrawal of its application for certificate of public convenience and necessity originally filed on June 17, 1963. Said application sought authorization for the construction and operation of unspecified facilities during a one-year period, to enable Applicant to render natural gas service to new direct industrial customers.

Following due notice, a public hearing under the Commission's shortened procedure was held on September 4, 1963. By order issued November 8, 1963, the proceeding was remanded to the Presiding Examiner for further hearing on a date to be thereafter fixed, citing the Commission's Opinion No. 409 and accompanying order, issued November 5, 1963, in Docket No. CP63-212, 30 FPC 1197, which covered an almost identical application.

Applicant has advised the Commission informally that it does not desire to prosecute its application herein as contemplated by the aforesaid order of November 8, 1963.

The Commission finds:

It is necessary and appropriate in the administration of the Natural Gas Act that Florida Gas Transmission Company be permitted to withdraw its application in Docket No. CP63-346.

The Commission orders:

(A) Florida Gas Transmission Company be and it is hereby permitted to withdraw its application filed June 17, 1963, in Docket No. CP63-346.

(B) The proceeding in Docket No. CP63-346 is hereby terminated and said docket closed.

Before Commissioner: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

LEONARD W. PHILLIPS, DOCKET NO. G-4220; LEONARD W. PHILLIPS, DOCKET NO. G-11201; J. R. BUTLER & CO. (OPERATOR), ET AL (SUCCESSOR TO BUTLER-JOHNSON SERVICE CORP., ET AL.), DOCKET NO. G-7247

ORDER GRANTING REHEARING AND MODIFYING ORDER

(Issued June 5, 1964)

On May 6, 1964, Leonard W. Phillips (Phillips) filed an application for rehearing of the Commission's order issued April 7, 1964, in the above-entitled proceedings insofar as that order provides in paragraph (E) thereof:

> * * * provided, however, that prior to the date of this order, Leonard W. Phillips shall not have been entitled to any rate effective during that time under Butler-Johnson Service Corp., *et al.*, FPC Gas Rate Schedule No. 1, as supplemented, higher than the rate of 8.6088 cents per Mcf at 14.64 psia last in effect under Leonard W. Phillips FPC Gas Rate Schedule No. 1.

By the April 7 order the Commission, among other things, amended the certificate issued in Docket No. G-7247 so as to include thereunder the interest of Phillips, heretofore covered under his own certificates in Docket Nos. G-4220 and G-11201, vacated the above certificates issued to Phillips, and accepted for filing Phillips' notice of withdrawal of its FPC Gas Rate Schedule No. 1.

In his application for rehearing Phillips points out that his interest has been covered specifically by the rate filings of the operator of his properties since January 14, 1957, when the then operator filed for a rate increase which was designated as Supplement No. 6 to Butler-Johnson Service Corp., *et al.* FPC Gas Rate Schedule No. 1 and accepted for filing to be effective as of February 14, 1957. Phillips also states that the buyer, United Gas Pipe Line Company, has in good faith paid the increased rate reflected in that filing and Phillips in good faith has been collecting the increased rate as of the effective date of the above rate filing.

Where a producer seeks coverage under the operator's rate schedule after having filed his own rate schedule, we require the producer to file a notice of withdrawal of his own rate schedule before permitting the producer to be covered by the operator. In the instant case, however, Phillips was not advised to nor did he withdraw his rate schedule, even though he was covered by the operator's rate filing and was so considered by all the parties. Under all of the circumstances presented here, we conclude that Phillips' interest was covered properly by the operator's rate filing even though he did not at that time withdraw his rate schedule. We shall therefore modify our order issued April 7, 1964 so as to delete therefrom the proviso objected to by Phillips.

The Commission orders:

For the reasons set forth above, the portion of paragraph (E) of the order issued April 7, 1964, in the above-entitled proceedings commencing with "provided, however" is hereby deleted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

ARIZONA PUBLIC SERVICE COMPANY, DOCKET NO. IT-5029

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO MEXICO AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued June 5, 1964)

Arizona Public Service Company (Applicant), incorporated under the laws of the State of Arizona with its principal place of business at Phoenix, Arizona, filed an application on March 31, 1964, for a supplemental order granting authorization, pursuant to Section 202(e) of the Federal Power Act, to transmit energy from the United States to Mexico in an amount not to exceed 2,400,000 kwh per year at a maximum transmission rate of 700 kw. The requested authorization would supersede that previously granted by the Commission's order issued June 30, 1954 (13 FPC 1157) in the above docket.

The application states that the energy will be sold to Junta Federal de Mejoras Materiales (Junta Federal) an agency of the Republic of Mexico pursuant to the terms and provisions of a written contract dated June 1, 1939, between Applicant's corporate predecessor, Arizona Edison Company, Inc. and J. M. Franco of the town of Naco, Sonora, Mexico and his successor the Junta Federal de Mejoras Materiales. The amounts of energy which Applicant proposes to export will be transmitted over facilities located on the international boundary line adjacent to Naco, Sonora, Mexico and authorized by Presidential Permit therefor signed by the President of the United States on July 30, 1941, released to Applicant's predecessor by order of the Commission entered July 28, 1942 and transferred to the Applicant by an Amendatory Presidential Permit (in the above docket) signed by the President of the United States on August 28, 1952, and accepted by the Applicant on October 1, 1952.

By the previously mentioned order, Applicant was authorized to transmit from the United States to Mexico up to 1,000,000 kwh of electric energy per annum at a rate not to exceed 300 kw. The application states that the increased amount of electric energy requested is needed to meet the additional electric energy requirements of Naco and its environs. The application further states that Junta Federal has no generating capacity to supply such additional requirements.

Applicant represents that it has sufficient energy available to transmit the additional electric energy at the increased rate of transmission without impairing the sufficiency of the electric supply within the United States.

Written notice of the application has been given to the Arizona Corporation Commission and to the Governor of that State. Notice of the application has also been given by publication in the Federal Register on April 18, 1964 (29 F.R. 5327), stating that any person desiring to be heard or to make any protest with reference to the application should, on or before May 1, 1964, file with the Federal Power Commission, Washington, D. C. 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The proposed transmission of electric energy from the United States to Mexico as limited herein and as hereinafter authorized will not impair the sufficiency of electric supply within the United States and will not impede or tend to

impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

(2) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) Applicant is hereby authorized to transmit electric energy from the United States to Mexico in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Applicant is hereby authorized to transmit from the United States to Mexico shall be in an amount not in excess of 2,400,000 kwh per year at a transmission rate not to exceed 700 kw; the energy to be transmitted over facilities specified in a Presidential Permit released to Applicant's predecessor by order of the Commission entered July 28, 1942 and transferred to the Applicant by Amendatory Presidential Permit (in the above docket) signed by the President of the United States on August 28, 1952, and accepted by the Applicant on October 1, 1952.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit, as amended, in Docket No. IT-5029, referred to in Paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall provide for the installation and maintenance of adequate metering equipment to measure the flow of all energy transmitted from the United States to Mexico pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish, in triplicate, to the Commission, with respect to such transmission of electric energy, reports annually on or before February 15, showing the kw hours delivered, the maximum kw of transmission, and the consideration received therefor during each month of the preceding year.

(F) This authorization to transmit electric energy from the United States to Mexico shall not be transferable or assignable, but in the event of the involuntary transfer of the facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale) said authorization shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by the afore-mentioned order of the Commission issued June 30, 1954 (11 FPC 1157), in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

ARIZONA PUBLIC SERVICE COMPANY, DOCKET NO. IT-5331

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO MEXICO AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued June 5, 1964)

Arizona Public Service Company (Applicant), incorporated under the laws of the State of Arizona, with its principal place of business at Phoenix, Arizona, filed an application on March 31, 1964, for a supplemental order granting authorization, pursuant to Section 202(e) of the Federal Power Act, to transmit electric energy from the United States to Mexico in an amount not to exceed 8,000,000 kwh per annum at a maximum transmission rate of 1,900 kw. The requested authorization would supersede that previously granted by the Commission's order issued April 6, 1960 (23 FPC 576) in the above docket.

The application states that the energy will be sold to Compania de Servicios Publicos de Agua Prieta, S. A. (Mexican Company), incorporated under the laws of the Republic of Mexico, pursuant to the terms of a contract dated December 1, 1945, between Applicant's predecessor, Arizona Edison Company, Inc., and Mexican Company. The amounts of energy which Applicant proposes to export will be transmitted over facilities located on the international boundary line adjacent to Agua Prieta, Sonora, Mexico, and authorized by a Presidential Permit therefor signed by the President of the United States on July 30, 1941, which was released to Arizona Edison Company, Inc., and subsequently transferred to Applicant by an Amendatory Presidential Permit signed by the President of the United States on August 28, 1952, both in Docket No. IT-5331.

By the previously mentioned order, Applicant was authorized to transmit from the United States to Mexico up to 6,000,000 kwh of electric energy per year at a rate of not to exceed 1,500 kw. The application states that the increased amount of electric energy requested is needed to meet the additional electric energy requirements of Mexican Company for its rendition of electric service to the community of Agua Prieta and its environs. The application further states that Mexican Company has no generating capacity to supply such additional requirements.

Applicant represents that it has sufficient energy available to transmit the additional electric energy at the increased rate of transmission without impairing the sufficiency of the electric supply with the United States.

Written notice of the application has been given to the Arizona Corporation Commission and to the Governor of that State. Notice of the application has also been given by publication in the Federal Register on April 18, 1964 (29 F.R. 5327), stating that any person desiring to be heard or to make any protest with reference to the application, should, on or before May 1, 1964, file with the Federal Power Commission, Washington, D. C. 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The proposed transmission of electric energy from the United States to Mexico as limited herein and as hereinafter authorized will not impair the sufficiency of electric supply within the United States and will not impede or tend

to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

(2) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) Applicant is hereby authorized to transmit electric energy from the United States to Mexico in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Applicant is hereby authorized to transmit from the United States to Mexico shall be in an amount not in excess of 8,000,000 kwh per year at a transmission rate not to exceed 1,900 kw; the energy to be transmitted over facilities specified in a Presidential Permit signed by the President of the United States on July 30, 1941, which was released to Arizona Edison Company, Inc., and later transferred to Applicant by an Amendatory Presidential Permit signed by the President of the United States on August 28, 1952, both in Docket No. IT-5331.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit, as amended, in Docket No. IT-5331, referred to in Paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall provide for the installation and maintenance of adequate metering equipment to measure the flow of all energy transmitted from the United States to Mexico pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish, in triplicate, to the Commission, with respect to such transmission of electric energy, reports annually on or before February 15, showing the kw hours delivered, the maximum kw of transmission, and the consideration received therefor during each month of the preceding year.

(F) This authorization to transmit electric energy from the United States to Mexico shall not be transferable or assignable, but in the event of the involuntary transfer of the facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale) said authorization shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by the aforementioned order of the Commission issued April 6, 1960 (23 FPC 576), in the above docket.

OPINION NO. 431

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. RP61-3; COASTAL TRANSMISSION CORPORATION, DOCKET NO. RP61-4

OPINION AND ORDER ON ACCOUNTING FOR CONSTRUCTION PROFITS AND CONSOLIDATED TAX, ADOPTING EXAMINER'S DECISION WITH MODIFICATION

(Issued June 8, 1964)

Syllabus*

1. **Question of affiliation must be determined on basis of entire history of pipeline and corporations involved. P. 1404.**
2. **By no sensible interpretation can transactions of December 8, 1954, properly be characterized as arm's-length bargain between the controlling group and the minority construction and engineering group. P. 1407.**
3. **Commission *holds* that as of time construction and engineering group occupied a position where they were able to control company actions in awarding contracts, they exercised this control in favor of their own firms. P. 1407.**
4. **No profits to affiliates rule precludes allowing profits in plant accounts of Houston Texas- -basis of such rule is that profit made by an enterprise dealing with itself does not represent cost. P. 1407.**
5. **Rule against profits to affiliates must be sufficiently broad to cover fact as well as form to prevent evils which have been the subject of past proceedings. P. 1408.**
6. **Purpose of no profits to affiliates rule is to prevent insiders taking advantage of their position and creating costs which are not subject to check of ordinary business relationships. P. 1408.**
7. **Where control exists sufficiently to dominate execution of contracts in face of united opposition, no-profits-to-affiliates rule is automatically applicable. P. 1408.**
8. **Rule requiring disallowance of profits to affiliates would be seriously weakened if it could be circumvented by resignation of insider (or his sale of stock) after he entered employment agreement, but prior to its conversion into formal contract. P. 1408.**
9. **Objection here is to the engineering and contracting promotors profiting a second time on contracts between themselves and the organizations they are promoting at expense of gas consumers. P. 1409.**
10. **Language regarding economic feasibility in prior certificate order cannot be converted into assurance that contract prices would be accepted- -if not accepted because of affiliation, the only course is disallowance of insider profits. P. 1409.**
11. **Since Coastal did not pay Federal income taxes or become liable to pay them, such amounts should not be accrued on its books. P. 1410.**
12. **Commission *finds* that amounts recorded in plant accounts of Houston Texas over cost to engineering and construction firms is a write-up, and together with related interest during construction should be transferred to other gas plant adjustment accounts on books of Florida Gas. P. 1411.**
13. **In proceeding under Section 4, of the Natural Gas Act, Commission *prescribes* accounting for construction profits and *disallows* Federal Income tax accruals.**

***Initial Decision appears on P. 1425. Rehearing denied by Opinion 431-A, 32 FPC 518. Reversed, *Florida Gas Transmission Co. v. F.P.C.*, 362 F. 2d 331 (CA5-1966).**

Commissioner O'CONNOR *dissenting.*

Commissioner WOODWARD *dissenting.*

Leon M. Payne, Robert M. Scott, and *R. Y. Patterson, Jr.* for Florida Gas Transmission Company.

Harry A. Poth, Jr., Richard M. Merriman, Peyton G. Bowman, III for Florida Power Corporation and Florida Power & Light Company.

Christopher T. Boland, Thomas F. Brosnan, George J. Meiburger for Florida Public Utilities Company.

Lewis W. Petteway for Florida Railroad and Public Utilities Commission.

Cyril S. Wofsy for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SWIDLER, *Chairman:*

This proceeding concerns (1) the proper accounting for Florida Gas Transmission Company's pipeline construction costs representing profits of allegedly affiliated engineering and construction companies and (2) the accrual of Federal income taxes on the books of Coastal Transmission Corporation. These issues were reserved in the Commission's order of June 8, 1962 (27 FPC 1123), accepting a proposed settlement of rate proceedings.

The corporations here involved were organized to transport natural gas from Texas to Florida. Houston Texas Gas and Oil Corporation (Houston Texas) and Coastal were granted a certificate for the pipeline by Opinion No. 301 (16 FPC 118) issued December 28, 1956,[1] and have completed the construction. Since that time the companies have merged and are now known as Florida Gas Transmission Company; and the name of their parent, The Houston Corporation, has been changed to Florida Gas Company.

On the first question there is an issue as to whether there was an affiliation between Houston Texas and the engineering and construction firms, and, if so, whether that part of the pipeline costs representing profits to these firms should be eliminated from the company's plant accounts. There is also a subsidiary question as to whether the profits should not be reduced by certain overhead costs of the construction firms. On the second question the issue is whether Coastal should be able to accrue a tax although it was included in a consolidated income tax return on which no taxes were payable.

I. The Costs Resulting from Profits of the Construction and Engineering Group

As a result of the Commission's order of June 8, 1962, a hearing was held in which it was developed that total cash outlays for the pipeline amounted to $112,439,325 for Houston Texas and $60,091,410 for Coastal, and these were recorded in the plant accounts of the companies. A part of the amount spent by Houston Texas was paid to four engineering and construction firms, Barnard & Burk, Midwestern Constructors, Inc., Walco Engineering and Construction Co., and Harbert Construction Corporation. The staff found that the total payments to these firms included $9,659,183 in excess of their actual costs.[2] The staff recommended that this amount with corresponding interest during construction of $304,950, amounting in all to $9,964,133, should be eliminated from the plant accounts. On the basis of the record the examiner found in his decision dated

---

[1] Affirmed as *Florida Economic Advisory Council* v. *F.P.C.,* 251 F. 2d 643 (CADC), certiorari denied 356 U.S. 959.

[2] $5,919,065 applicable to the joint venture composed of Midwestern and Walco; $3,082,810 applicable to Harbert and $657,306 applicable to Barnard & Burk.

September 23, 1963, that the firms became part of an affiliated group in the promotion of Houston Texas and that the construction profit should be eliminated from its plant accounts. We agree with the examiner's conclusion but modify it below with respect to overhead costs of the construction firms.

The question of affiliation must be determined on the basis of the entire history of the pipeline and of the corporations involved. Originally, for the purpose of building a pipeline to New York or Chicago a Texas corporation known as Houston Texas Gas and Oil Company (Houston Texas Company) was organized May 12, 1952, by one J. O. Mack, a successful oil producer, and he was joined by his wife, H. S. Mack, and his son-in-law, A. R. Kleinkauf. Later O. Paul Herzig became chief engineer and a director, and F. R. Smith became associated with the enterprise. The capital structure of this company consisted of 1,000 shares at a par value of $1.00 per share, and this was never increased. Because Mr. Mack did not have available the necessary financial resources or experienced personnel he made efforts to interest other firms in the project.

Mr. Charles C. Barnard was the first such investor to join the group. Mr. Barnard, who met Mr. Mack on his own initiative early in 1954, was a partner in the consulting engineering firm of Barnard & Burk. After a series of conversations it was orally agreed that Barnard & Burk would prepare a survey of the Florida market at their expense, that they would be reimbursed for costs when funds were available, that they would do the engineering for the project at the going fee for the type of work involved, and that out of cash or services they would be permitted to purchase a certain amount of founders' stock.

Later Mr. John M. Harbert, president of Harbert Construction Corporation, Mr. Paul C. Wallack, president of Walco, and Mr. F. E. Stanley, president of Midwestern Constructors, Inc., also heard about Mr. Mack's plans, met Mr. Mack and eventually joined the enterprise. Through oral agreements with Mr. Mack each of these individuals agreed to advance risk capital and to contribute their knowledge and experience; in turn they were to be given the right to construct a portion of the pipeline and to acquire stock participation in the project.

On July 22, 1954, Houston Texas was incorporated in Delaware for the purpose of acquiring the assets of Houston Texas Company and constructing a natural gas pipeline, and Mr. and Mrs. Mack and Mr. Kleinkauf became the first directors. Later Mr. Mack's associates Herzig and Smith became directors and numerous meetings were held at which plans for constructing the project were developed. By September 16, 1954, Messrs. Harbert, Wallack and Stanley were advancing small amounts of risk capital, and on October 27, 1954, along with Mr. James Roddy of the financial firm of Scharff and Jones in New Orleans and Mr. Barnard, met with officials of Blyth & Company in New York to work out arrangements for that firm to act as underwriters and investment advisers for the project.

On December 8, 1954, the board of directors of the new company approved the oral agreements that Mr. Mack had made, now reduced to writing in the form of stock subscription agreements with respect to providing funds, and in the form of letter agreements with respect to the performance of the work. The board then consisted of Mr. Mack, Mrs. Mack, and Messrs. Kleinkauf, Herzig, and Smith. The board also approved the acquisition of the assets of The Houston Texas Company. After this and at the same meeting it voted to increase its membership to include Messrs. Barnard, Harbert, Wallack, and Stanley, and Mr. Stanley was elected Chairman. Mr. T. Rinehart, Mr. Stanley's legal counsel, was appointed general counsel and was granted an option to purchase stock. On the same day Midwestern and Walco, Harbert, and Barnard & Burk subscribed in all to 37.5 percent of the stock in Houston Texas.

The letter agreement with Barnard & Burk provided that if Houston Texas acquired a certificate it agreed to employ Barnard & Burk as engineers under a contract "incorporating a cost or fees no higher than an arm's-length contract for similar services under similar circumstances." The agreement specifically provided that "the amount of the fees and compensation set forth herein are not, and shall not be deemed to have been, agreed to at this time." Attached to the letter agreement, which was accepted by Barnard, was a form of contract to be executed later.

The letter agreements with Harbert Construction Corporation, and with Midwestern and Walco acting jointly, both provided for a "cost no higher than an arm's-length contract for similar work under similar circumstances." In the Harbert agreement Houston Texas agreed to employ the firm to construct the 18-inch main line from Haines City, Florida, to Miami, Florida, including all laterals. In the Midwestern-Walco agreement Houston Texas agreed to employ the firm to construct all main line facilities from a point near Bay St. Louis, Mississippi, to Haines City, Florida.

In February of 1955 Houston Texas made arrangements to obtain a gas supply from Coastal, then a wholly owned subsidiary of Delhi-Taylor Oil Corporation, and it became necessary for the investors in Houston Texas to divest themselves of part of their interest to permit Delhi-Taylor to purchase an interest. On August 26, 1955, Houston Texas filed its application with the Commission for a certificate. At the time the application was heard the Houston Texas stock was owned as follows: Barnard & Burk, 10.2 percent; Harbert, 5.1 percent; Midwestern group, 9.6 percent; Walco group, 10.0 percent; Mack group, 35.7 percent; Delhi-Taylor, 14.3 percent; investment bankers, 11.4 percent, and others, 3.7 percent. The board of directors then was composed of Barnard, Bashore (vice president of Blyth and Co.), Harbert, Herzig, Kleinkauf, Rinehart, Roddy, Stanley, Wallack, and Mrs. Mack.

In March 1957 The Houston Corporation was formed, and all stockholders of Houston Texas exchanged their stock for shares in The Houston Corporation of which Houston Texas was now the 100 percent subsidiary. In June 1958 The Houston Corporation obtained by exchange of stock all of the stock of Coastal, and Delhi-Taylor became owner of 48.3 percent of the stock of The Houston Corporation.[3] Changes were also made in the board of The Houston Corporation which thereafter consisted of W. J. Bowen, president of Coastal; Harold A. Martin, vice president of a bank in Jacksonville, Florida; Carl M. Mueller, vice president, Bankers Trust Company, New York City; Leon M. Payne, a Houston lawyer; Rinehart; Barnard; and Stanley, who was Chairman of the Board and President. At the same time the board of Houston Texas was revised to consist of Bowen, Herzig, Kleinkauf, Payne, Rinehart, Stanley, and Mrs. Mack.

In August of 1958 The Houston Corporation carried out the necessary public financing. Definitive contracts containing prices at which the work was to be performed were negotiated and were approved by the board of Houston Texas on October 23, 1958.[4] At that time the composition of the boards of directors of The Houston Corporation and Houston Texas were the same as those listed above for June of 1958. The testimony shows that regardless of their legal import, all of the new directors of The Houston Corporation and Houston Texas assumed that the letter agreements were to be honored as at least a "moral obligation," and no consideration was ever given to adopting a different mode for determining who would do the work involved.

---

[3] Delhi Taylor's ownership consists only of Class A stock which had one tenth of a vote per share until 30 days after the public financing in August of 1958 when it had one fourth of a vote per share.

[4] The contracts had been previously submitted to the board of The Houston Corporation and in effect approved.

At this time in addition to being a director of each company, Mr. Stanley was chairman of the board and president of The Houston Corporation and president of Houston Texas. The maximum percentages of stock owned by the engineering and construction representatives in The Houston Corporation at any time subsequent to the public financing up until December 1960 were as follows: Mr. Barnard, 0.9 percent; Mr. Harbert, 3.3 percent; Mr. and Mrs. Stanley, 2.4 percent, and Mr. and Mrs. Wallack, 3.0 percent, or 9.6 percent in all. Because of the large offering of common stock to the public (1,809,400 shares or 52%) the shares held by the engineering and construction representatives are not insignificant.

While the relative stock interest of the engineering and construction group in the pipeline enterprise declined in the period between the approval of the letter agreements in December 1954 and the ratification of the definitive contracts in October 1958, the influence on company policy exerted by the original group of promoters persisted. After the execution of the letter agreements the record shows that Messrs. Stanley, Wallack, Harbert, and Barnard devoted a great deal of time and effort to the problems of getting the pipeline built and the enterprise established on a business basis. Their entrenched position is shown by the fact that several inquiries by other firms about constructing the pipeline or performing engineering services were answered by the statement that the work had already been awarded to the four firms involved here. Even the negotiation of definitive contracts could not be separated from the same group. At the meeting of the board of directors of Houston Texas on March 19, 1957, the president, Mr. Stanley, appointed separate committees to negotiate contracts wth Barnard & Burk and the three construction companies. Mr. Stanley appointed Messrs. Herzig and Rinehart and himself to deal with Barnard & Burk,[5] and Messrs. Herzig, Barnard and Rinehart to deal with the construction companies. Thus members of both committees were on the same board of directors, had common interests[6] and were appointed by the president who was a representative of one of the construction contractors. Mr. Stanley testified, that "the persons negotiating the Midwestern-Walco contracts were under strict and absolute instructions to negotiate those contracts in accordance with the provisions of the letter agreements." All of the work was offered to the construction firms and awarded to them except for certain river crossings, laterals, and meter regulator stations for which the committee thought the proposals of the construction firms were too high after checking with other contractors.

The evolution of this enterprise, which must be traced through the complicated details of stock ownership, agreements, financial needs and personal relationships, is plain enough in general pattern. A group of promoters combined their talents and resources, and representatives of the engineering and construction firms were members of this original group. As the enterprise expanded other persons and other resources were brought in, but representatives of the engineering and construction firms remained at the center of the operation where they were in a position to protect their rights to perform the services, the cost of which is involved here.

---

[5] The agreement with Barnard & Burk was never brought to a definite contract, but the record shows that the parties acted within the terms of the appendix to the letter agreement. Under these terms Barnard & Burk would receive a percentage of the pipeline costs, but this was limited later by oral agreement. Competitive bids were not sought from other firms.

[6] While Rinehart, who owned 9.8% of the common stock of The Houston Corporation before the public offering, was not personally interested in the construction contractors, he was or had been Mr. Stanley's lawyer and had been brought into the company through Stanley.

There may never have been any formal agreement between the members of the engineering and construction group and the Mack interests to control jointly the several companies through which they operated. However, it is clear that the Mack group was dependent upon the construction and engineering group and could not have repudiated the oral agreements with the construction and engineering group (or its individual members) when on December 8, 1954, the Mack interests had Houston Texas (in which they momentarily owned all the stock and made up the entire board of directors) approve the agreements in written form. Absent the participation by the construction and engineering group which was consummated immediately thereafter Houston Texas was a mere shell.

By no sensible interpretation can the transactions of December 8, 1954, properly be characterized as an arm's-length bargain between a controlling Mack group and a minority construction and engineering group. They were, instead, a series of agreements between a corporation and contractors who were an integral and essential element of the corporate management, and who could destroy the corporation unless it agreed to their prearranged transactions. We hold that as of the time the construction and engineering group occupied a position where they were able to control the actions of the company in the awarding of construction and engineering contracts, that they exercised this control in favor of their own firms, and that the contracts in issue reflect this relationship.

It is arguable that during the subsequent four years the construction and engineering group lost the absolute power to impress their will upon the pipeline company, parent or subsidiary. It is unquestionable, however, that throughout this period the group or its representatives remained as active participants in the company management, and that the new members of the board of directors of the parent company made no effort to reconsider the 1954 determinations but treated them as binding. Under these circumstances we do not believe that it can properly be concluded that the original affiliation taint has been purged, or that the October 1958 ratification of the earlier agreement represented an independent judgment by the parent company to employ the construction and engineering group because they could perform the work as well and as cheaply as any other group.[7]

We think that our rule against profits to affiliates precludes allowing their profits in the plant accounts of Houston Texas. The no-profits-to-affiliates rule goes far back in Commission history. See for example *Alabama Power Co.*, 1 FPC 25, 39, aff'd *Alabama Power Co. v. McNinch*, 94 F. 2d 601 (CADC 1937); *Louisville Hydro-Electric Company*, 1 FPC 130, 133, aff'd *Louisville Gas & Electric Co. v. F.P.C.*, 129 F. 2d 126 (CA6 1942), cert. den. 318 U.S. 761. The basis of this rule is that a profit made by an enterprise dealing with itself does not represent cost. As we indicated in *St. Croix Falls Minnesota Improvement Company, et al.*, 3 FPC 13, 21, "it is impossible and unrealistic to determine whether profits paid to an affiliated construction company are 'reasonable profits'" and "comparison with over-all cost, including the affiliated company's profit, with what might have been cost if actual competition for the work had existed and if the work had been done by a non-affiliated construction company is sheer speculation."[8]

---

[7] We do not hold that an affiliation condition which would call for application of the rule can never be eliminated once created, but only that it was not here.

To prevent the evils which have been the subject of past proceedings the rule against profits to affiliates must be sufficiently broad to cover fact as well as form. The dissent suggests the rule should apply only where there is a situation of complete control and, further, complete control at the point in time when the formal contracts were executed on October 23, 1958. We do not agree. The purpose of the rule is to prevent insiders taking advantage of their position and creating costs which are not subject to the check of ordinary business relationships. *Cf.*, Section 10 of the Clayton Act, 15 U.S.C. § 20.[9] We do not think that some particular percentage of stock or of common officers or directors can be allowed to be determinative of whether the rule should apply, although these factors are relevant to determine when a relationship exists that calls for application of the exclusionary rule. That the contractors or promoters could not have dictated policies or ordered the execution of contracts if all other interests had chosen to oppose them cannot validate a relationship which by its very nature and history precludes unhampered bargaining, especially if the contractors or promotors were, as here, clearly dominant when the original contracts were agreed upon. If control exists, sufficient to dominate the execution of the contracts in the face of united opposition, that makes the rule automatically applicable; but our inquiry is not at an end if we conclude that the insider's influence resulting in the contract is or became somewhat less than this degree of control.

The dissenting opinion, citing *Florida Power Corp.*, 1 FPC 390 (1937), argues that affiliation must be determined solely with reference to the situation prevailing as of the date the formal employment contracts were executed, and that indicia of control or influence at earlier periods are irrelevant. The *Florida Power* case, however, presented a situation where there never were any dealings between company insiders and construction or engineering firms under their control: the employment contracts in issue resulted from the arm's-length bargaining between the original promoters of a company and a completely unrelated concern, which as part of the consideration for purchasing the promoters' stock agreed to employ them subsequently to build the project involved. It was this fact, rather than the corporate situation when the employment agreements were subsequently ratified (by which time the original promoters had long since ceased to have any relationship to the company), which led the Commission to allow reasonable profits on the work done. If the rule requiring disallowance of profits to affiliates could be circumvented by the resignation of the insider (or his sale of stock) after he enters into an employment agreement, but prior to its being converted into a formal contract, it would be seriously weakened as an effective sanction against such activities.

We also need not consider whether, as the dissent suggests, there may be other situations involving less than arm's-length bargaining in which the public interest can be adequately protected by approaches not calling for exclusion of a supplier's or contractor's profits from company costs. The rule that profits from contracts of a supplier or contractor affiliated with the regulated company should be excluded from its cost of service has proved its worth and is fully applicable here upon any realistic test of what occurred.

---

[8] In the *St. Croix* case the Commission by way of footnote indicated that it was using the term "affiliated company" there in the sense of the definition of this term in our Uniform System of Accounts. For the reasons set forth in this opinion we do not believe there is any basis for limiting the so-called "no-profits-to-affiliates" rule to such situations.

[9] This section makes it a crime for any common carrier to make any contracts for construction in an amount more than $50,000 with another firm when the carrier shall have upon its board of directors or as its president, manager, or purchasing officer any person who is at the same time a director or manager or who has a substantial interest in the firm, except under competitive bidding.

It has been suggested by the dissent that the effect of our decision here will discourage the promotion of pipeline projects by promoters pooling their interests. Of course, we have no such intention. We do not object to promoters making a profit on their investment of time, effort and financial resources in a developing pipeline enterprise. They will presumably realize this profit on the enhanced value of the shares of stock distributed to them. What we do object to is the engineering and contracting promoters profiting a second time on contracts between themselves and the organization they are promoting at the expense of the gas consumers.

Houston Texas points out that full disclosure of the relation of the pipeline enterprise with the engineering and construction companies was made in the certificate proceeding and that the Commission's opinion shows that the engineering and construction costs would be allowed if reasonable. Houston Texas also contends that the examiner erred in refusing to admit and consider evidence of their reasonableness. The arguments rest on the following language of the Commission in its certificate opinion (16 FPC at p. 142):

> Finally, it appears that the labor necessary for construction of the facilities of Houston Gas will be furnished by three construction companies, the president of each of which is an official and director of Houston Gas and that two of these construction companies own blocks of Houston Gas stock. Furthermore, a member of the firm of engineers which will supervise the construction and operation of the pipeline is also a vice president and director of Houston Gas. While as we have already stated, the cost of the proposed facilities appears to be reasonable, in view of this fact, this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates of Houston Gas.

We agree with the examiner that Houston Texas misconstrues the purpose of the language in the certificate opinion. There the Commission was making a determination on the feasibility of the project. In its opinion the cost appeared to be reasonable from this standpoint, but it specifically deferred consideration of the costs in relation to the affiliation question. On its face the language is a warning that because of the affiliation problem contract costs would not be accepted at face value but would be subject to scrutiny. We do not see how it can be converted into assurance that the contract prices would be accepted. If they are not accepted because of affiliation, there can be only one course, disallowance of insider profits.

Houston Texas' interpretation assumes that the Commission would abandon its long-standing rule against profits between affiliates with no discussion or consideration. Such an interpretation does not seem warranted, and it is therefore not relevant to inquire into the reasonableness of the profits. There is no reason in the record to doubt that the engineering and construction costs, apart from the profits, were reasonable.

In computing the profit arising from the engineering and construction contracts the staff did not include certain costs representing company overhead and arising largely before commencement of construction of the pipeline project. Houston Texas contends that these overhead charges, amounting to $312,809 for Harbert Construction Corp., $953,243 for Midwestern and $456,586 for Walco, should reduce the profits earned by the construction companies. The staff contends with respect to Midwestern and Walco that it properly allowed only the costs of their joint venture and disallowed any costs attributable to the separate corporate entities inasmuch as the costs incurred by the separate entities were not associated directly with the construction of the pipeline. The staff also objects to allocating a portion of the general and administrative expenses of Harbert for the period 1955 through 1958 to reduce the profits of Harbert on the grounds that these costs arose prior to the actual construction, were incurred through efforts to obtain gas sales contracts for the pipeline and represent pre-operational expenses. In our opinion the overhead costs of all three construction companies claimed by them were shown by the record to be associated with the pipeline construction and went to reduce the actual profit they obtained from their contracts with Houston Texas. Therefore the profits disallowed by the staff in the amount of $9,659,183 should be reduced by $1,722,638 to $7,936,545. Interest on the reduced amount would be $250,565, making $8,187,110 in all.

II. Accrual of Taxes on Books of Coastal

The second issue reserved for consideration in these proceedings arises because Coastal accrued on its books $1,737,000 in Federal income taxes for May 1961 through August 1962 when it was merged with Florida Gas Transmission Company, but did not owe or pay such taxes because the consolidated returns filed by the parent company, The Houston Corporation, for the years 1958 through 1961 showed net losses, and it was expected that such losses would occur until 1965. We agree with the examiner that since Coastal did not pay such taxes or become liable to pay them, these amounts should not be accrued on its books, and we adopt the examiner's discussion on this point. We may point out further that in our opinion Coastal's argument in its exceptions that the *Northern* case,[10] cited by the examiner, is distinguishable has no merit. Coastal points out that the *Northern* case involves the special treatment given intangible well drilling costs and percentage depletion. It makes no difference whether no tax is paid because there are tax losses resulting from the use of these statutory deductions or whether the losses are operating losses. The point is that where there is no tax liability on a consolidated basis, none should be accrued on Coastal's books and, of course, no taxes would be allowed in a rate case in accordance with our *Cities Service* opinion.[11]

Coastal seeks to interpret the Commission's Uniform System of Accounts as permitting accrual of taxes in that Section 7, Current and Accrued Liabilities, under "Balance Sheet Accounts" provided that accrued taxes shall be classified "as accrued liabilities even though payable more than one year from date." Coastal says that the taxes accrued on its books will be offset by the first payment of taxes by the consolidated group and therefore will be paid. The statement in the Uniform System of Accounts, however, has reference to taxes payable; that is, taxes for which Coastal is liable, but Coastal was not shown to be liable for taxes except on the contingency that in some later year a tax would be payable on the basis of the consolidated return. Therefore Coastal has no taxes payable and should not accrue them. Any other result would be inconsistent with *Cities Service*, where we determined that the tax allowance in a rate case should be a proportional part of the taxes payable on a consolidated basis, while here no tax was shown to be payable on the consolidated returns for the period in question.

---

[10] *Northern Natural Gas Company*, 26 FPC 841.

[11] *Cities Service Gas Co.*, 30 FPC 158, Opinion No. 396, Docket No. G–18799, July 15, 1963.

Coastal contends further that the decision reached by the examiner and by us here would result in rate decreases to nonjurisdictional customers who are not subject to our jurisdiction. This is because they pay for gas on a cost-of-service basis. Contrary to Coastal's contentions, we are not indirectly trying to regulate the nonjurisdictional sales of the system. We are merely determining an accounting matter that was excluded from the settlement of a rate case. The computation of Florida Gas' rates to its nonjurisdictional customers is a matter for private contracts, and we are in no way attempting to fix these rates. Whether the treatment of the consolidated tax required here will have an effect on jurisdictional rates is not before us for determination.

The Commission further finds:

(1) The $7,936,545 recorded in the plant accounts of Houston Texas over the cost to the above-named engineering and construction firms is a write-up and together with the related amount of $250,565 of interest during construction should be transferred from Account 101, Gas plant in service, to Account 116, Other gas plant adjustments, on the books of Florida Gas Transmission Company.

(2) It is reasonable and appropriate that the write-ups and other improper charges in the plant accounts of Florida Gas Transmission Company of $7,936,545 and $250,565 to be transferred to Account 116, Other gas plant adjustments, be disposed of by a charge to earned surplus, except to the extent of any accrued depreciation applicable to the amounts, which depreciation amounts are chargeable to Account 108, Accumulated provisions for depreciation of gas plant in service.

(3) The accruals for income tax purposes by Coastal now reflected on the books of Florida Gas Transmission Company are in violation of the Commission's Uniform System of Accounts.

The Commission orders:

(A) Florida Gas Transmission Company shall classify the amounts of $7,936,545 and $250,565 included in its plant accounts and referred to in Finding (1) above, in Account No. 116, Other gas plant adjustments, of the Commission's Uniform System of Accounts prescribed for natural-gas companies.

(B) Florida Gas Transmission Company shall dispose of the amounts classified in Account 116, Other plant adjustments, referred to in Paragraph (A) above, as set forth in Finding (2) above.

(C) Florida Gas Transmission Company shall eliminate the accruals by Coastal of the amounts accrued for income tax purposes included in its Accounts 236 and 409, above referred to in Finding (3).

(D) Florida Gas Transmission Company shall submit within 90 days from the date on which this decision becomes final certified copies of accounting entries effecting compliance with the requirements of Paragraphs (A), (B), and (C) above.

(E) The decision of the presiding examiner is hereby adopted as the decision of the Commission to the extent not inconsistent herewith.

(F) Exceptions not specifically granted are hereby denied.

Commissioner O'Connor *dissenting.*

Commissioner WOODWARD *dissenting* on the issue of consolidated taxes, consistent with the views expressed in his dissenting statement accompanying Opinion No. 396, issued July 15, 1963 in Cities Service Gas Company, Docket No. G–18799, 30 FPC 158.

O'CONNOR, Commissioner, *dissenting:*

A primary issue before the Commission is whether four contracts dated October 23, 1958, were executed between affiliated companies. I respectfully dissent from the majority's conclusion that they were.

At the threshold of this issue lies two subsidiary issues: First, the appropriate date as of which affiliation is to be tested, and secondly, the proper test to be employed at this date.

It is Staff's contention that the test date should be December 8, 1954, when Houston Texas authorized its Board of Directors to enter into Letters of Agreement with the contracting companies. Florida Gas, however, contends that the legally significant date is October 23, 1958, when the definitive contracts were finally executed. Fortunately, this issue was raised, argued, and decided twenty-seven years ago.

In *Florida Power Corporation*,[1] two contractors (Hardaway), two engineers (Mees) and a fifth party (Winthrop) organized West Florida Power Company to build a hydro-electric project. They later transferred their West Florida capital stock to Central Florida Power & Light in consideration of $175,000 and an agreement ". . . to employ the Hardaways as contractors and the Mees Brothers as construction engineers, provided the purchasers erected a hydro-electric plant on the Ocklocknee River within 3 years."[2] The agreement and stock were subsequently transferred to the Florida Power Corporation, which controlled West Florida at the time the license was granted.

The Commission was then faced with rendering an "actual legitimate original cost" determination for the project. In reaching this determination, it discussed the propriety of including various cost elements. Only two are pertinent here. The first involved $109,903.61 paid by the licensee to its parent for construction supervision. The Commission reaffirmed its conviction, earlier enunciated in the *Alabama Power Co.* case[3] and *Louisville Hydro-Electric Co.*,[4] that inter-affiliate transactions are to be recorded at cost, and summarily disallowed the supervision fee. The second element, however, involved the fees paid to the Hardaways and the Mees Brothers pursuant to the earlier executed service agreements. Here the Commission refused to invoke the exclusionary rule noting that ". . . whatever financial interest Mees & Mees had in the license terminated *at the time the contract of July 8, 1925 was executed.*"[5]

It then concluded:

> It is obvious that the terms of the sales contract precluded competitive bidding, ... A careful study of the record, nevertheless, results in the conviction that, notwithstanding the absence of competitive bidders, the fee paid by the licensee is reasonable.[6]

The obvious holding of *Florida Power* is that affiliation is to be tested at the time definitive contracts are executed, and, absent a showing of affiliation the extent of inclusion will depend upon the reasonableness of the fees. Inasmuch as the Commission had previously decided four litigated Section 4(b) cases involving the "no profits" rule,[7] and invoked the rule in this case, *Florida Power* can hardly be dismissed as a decisional oversight.

[4] 1 FPC 130 (1933).

[5] 1 FPC at 406. Emphasis supplied throughout this statement unless otherwise stated.

[6] *Ibid.*

Further, the decision is eminently sound. The existence of control is relevant, and should be tested, only at the moment legal obligations to pay become vested, for only at this moment do the interests of ratepayers became involved. These interests had not become involved on December 9, 1954. The Letters of Agreement, signed the day before, obligated Houston Texas to do nothing more than negotiate.[8] Enforceable contracts did not come into being, and the interests of ratepayers did not become involved, until October 23, 1958, when the "affiliates" were no longer in control of either The Houston Corporation or Houston Texas. Consequently, testing for control prior to this date is inappropriate.

Equally inappropriate is the majority's contention that to follow Florida Power would allow those in control of a company to negotiate agreements with their own service firms, leave the company, then later have their firms execute a formal agreement with the company along the identical lines set forth in the initial agreement. Surely if the initial agreement legally bound the company to pay specific fees, affiliation should be tested as of that date. This, however, is not the fact in the instant case.

The second subsidiary issue involves the appropriate test for affiliation. Since the *St. Croix Falls Minnesota Improvement Co.* case,[9] this test has been undisputed. It requires a finding that the reporting company controls, is controlled by, or is under common control with other companies or persons.

The core determination in this case thus becomes: Did the four companies on October 23, 1958, control Houston Texas.[10] In order to adequately answer this question, the structure of The Houston Corporation, as of this date the sole parent of Houston Texas, must be examined.

The Houston Corporation was formed in 1957 with 600,000 authorized shares. At inception, its capital structure was as follows: the Mack group[11] controlled 23.8 percent of the stock; the engineering and construction group[12] controlled 30 percent; Delhi-Taylor, pursuant to a previous agreement, controlled 13 percent; various investment bankers controlled 10.6 percent; and other interests controlled 14 percent. The Board of Directors was comprised of the following: Mr. F. E. Stanley, Mr. Theodore Rinehart, Mr. C. C. Barnard, Mr. O. Paul Herzig, Mr. Paul C. Wallack, Mr. John M. Harbert, III, Mr. Allen R. Kleinkauf and Mrs. H. S. Mack.[13]

[7] *Louisville Hydro-Electric Co.*, 1 FPC 130 (1933), *aff'd. sub. nom. Louisville Gas & Electric Co.* v *F.P.C.*, 129 F. 2d 126 (CA6, 1942), cert. denied, 348 U.S. 761 (1942); *Chelan Electric Co.*, 1 FPC 102 (1933); *Safe Harbor Water Power Corp.*, 1 FPC 230 (1935); *Clarion River Power Co.*, 1 FPC 269 (1935). Although these cases were decided under the Federal Power Act, Section 6(a) of the Natural Gas Act likewise empowers the Commission to determine "actual legitimate cost." 52 Stat. 824 (1938).

[8] The Letters of Agreement typify the "incomplete" and thus unenforceable contract to which Page refers in his definitive study of contract law. 1 PAGE, CONTRACTS §§ 87–89 (2d ed. 1920). As an example, he cites offers "which leave the amount of compensation to be determined by subsequent negotiation, fixing only the extreme limits within which the negotiations are to range." *Ibid.* at 122. See generally, 1 WILLISTON CONTRACTS, *Making of Offers*, §§ 41, 42 (3d ed. 1957) and 1963 supplement citing similar illustrations of agreements too indefinite for enforcement.

[9] 3 FPC 13 (1942).

[10] There is no claim that these companies were controlled by, or under common control with, Houston Texas.

[11] Estate of J. O. Mack, Helen S. Mack, Allen R. Kleinkauf, B. M. Kleinkauf, O. P. Herzig and family.

[12] Barnard & Burk, John M. Harbert, III, Midwestern Constructors, Walco Engineering & Construction Company, and Midwestern-Walco.

[13] Mr. Harold A. Martin was elected to the Board at the special meeting on December 14, 1957.

In June of 1958, however, the acquisition of Coastal Transmission Company from Delhi-Taylor, as well as the consummation of the public financing, caused a structural alteration in The Houston Corporation. Delhi-Taylor now held 48.3 percent of the Houston Corporation stock. The interest of Mr. Barnard, who as of June 1957 held 2.55 percent, fell to .9 percent. The interest of Mr. Harbert, previously 4.7 percent, fell to 3.3 percent. Likewise, the interest of Mr. Wallack and family, previously 4.8 percent, decreased to but 3 percent. The same dimunition was true in the case of Mr. Stanley and family, whose interest went from 6.18 percent to 2.4 percent. Changes in control were reflected in changes in management. At the June 1958 annual meeting, the Board of Directors became composed of Mr. W. J. Bowen, Mr. Leon M. Payne, Mr. Carl M. Mueller,[14] Mr. Harold A. Martin, Mr. Rinehart, Mr. Stanley, and Mr. Barnard.[15] The Board of Houston Texas was likewise reconstituted. As of this date it was comprised of Messrs. Bowen, Herzig, Kleinkauf, Payne, Rinehart, Stanley, and Mrs. Mack.

Consequently, the gist of the majority's opinion is that four companies dominated Houston Texas at a time when: First, six of its seven directors and five of the seven directors of The Houston Corporation were admittedly beyond their control,[16] and second, the sum total of all their interest was 9.6 percent. I cannot subscribe to this conclusion.

The majority's error lies in its confusion of "lack of arm's length bargaining," which may have existed in this case, with "affiliation," which surely did not. "Lack of arm's-length bargaining" may include "affiliation" but it does not necessarily include it. "Lack of arm's length bargaining" is a general term; all it requires is that a contract be executed under conditions of collusion, fraud, gross neglect or undue influence. In such event, the reporting party then has the burden of justifying the reasonableness of its claimed costs. Any costs in excess of what is determined to be reasonable are disallowed. "Affiliation," however, is a word of art. If affiliation is found, any profit paid is summarily disallowed and the reasonableness of the profits is irrelevant. Affiliation, however, requires a very specific finding; namely, that as of the date of the execution of a contract, one of the parties controlled, was controlled by, or was under the common control with, the other party. As applied to the instant case: it means that the four parties not only had the power to execute the October 23 contracts under any terms they desired, but that they also, at this date, possessed the power ". . . to direct or cause the direction of the management and policies of [The Houston Corporation] . . ." [17] This requirement demands by its very terms that these four companies have complete control over every phase of corporate management as of October 23, 1958. Not even Staff has asserted that control existed to this extent, but without it the whole claim of affiliation must fall.[18]

The majority's contention that *St. Croix* can be satisfied with less than this, and that the "no-profits" rule was designed to preclude all insider profits, is an overstatement. Its principle was not "no profits to insiders: but "no profits to *controlling* insiders," and it was developed to prevent holding companies from compounding profits in intercorporate transactions. The rule recognized the fiction of treating corporations, dominated by a common parent, as separate. It also recognized that only with this dominance could they be said to be but one corporate entity. This is revealed by examining the corporate relationship to which the rule was applied. It is also revealed by comparing the rule, as enunciated in *St. Croix*, with true "no profits to insiders" rules such as Section 12 of the Natural Gas Act, Section 305(a) of the Federal Power Act, and Section 2(a)(11)(A)-(D) of the Public Utility Holding Company Act of 1935.[19]

---

[14] Mr. Mueller subsequently resigned and was replaced by Mr. Felix A. Mulgrew, a Vice President of The Bankers Trust Company on February 15, 1959.

[15] At this time the principal officers of The Houston Corporation were: Mr. Stanley, Chairman of the Board and President; Mr. Bowen, Director and Senior Vice President; Mr. Rinehart, Director, Senior Vice President and Secretary; Mr. Herzig, Vice President-Engineering, and Mr. Kleinkauf, Assistant Treasurer.

[16] Tr. 1598. Staff Witness Heim admitted that no control existed as to Messrs. Bowen, Payne, and Rinehart. Three other directors, Messrs. Herzig and Kleinkauf and Mrs. Mack were never considered to be controlled by the service firms.

[17] Section 5(b) of the Uniform System of Accounts, defining "control."

[18] *Cf., Detroit Edison Co.* v. *S.E.C.*, 119 F. 2d 730, 738–39 (CA6, (1941)), cert. denied, 314 U.S. 618 (1941), defining "control" under a less stringent statute than Section 5(b).

The distinction between "affiliation" and "lack of arm's length bargaining" is not an exercise in academic hair-splitting. It is both substantive and significant, and is supported by the legal history of the "no-profits" rule.

The inception of the rule is often recognized as *Smith* v. *Illinois Bell Tel. Co.*,[20] where litigation arose over rates set for Illinois Bell Telephone by the Illinois Commerce Commission. In dispute were several cost items including payments made to the Western Electric Company for equipment. Ninety-nine percent of the stock in Western Electric, as was 99 percent of the stock in Illinois Bell, was owned by American Telephone & Telegraph. Thus, American Telephone & Telegraph was in a position to exercise complete control over every phase of the Illinois Bell and the Western Electric operations. In reversing and remanding for additional findings, the Supreme Court noted:

> . . . Western Electric Company, through the organization and control of the American Company, occupied a special position with particular advantages in relation to the manufacture and sale of equipment to the licensees of the Bell System, including the Illinois Company, that is, that *it was virtually the manufacturing department for that system, . . .*[21]

The Smith case was relied on two years later in *Western Distrib. Co.* v. *Pub. Serv. Comm'n of Kansas.*[22] Here Cities Service Gas Company was selling gas to Western Distributing Company at the city gate of El Dorado, Kansas. The two companies were under the common control of Cities Service Company, a once removed holding enterprise. Western Distributing Company had filed for a rate increase, and a question arose over the reasonableness of the 40¢ per Mcf paid to Cities Service Gas Company. Western argued that inasmuch as the rate was charged in interstate commerce its reasonableness was beyond the scope of inquiry of the Kansas Commission. The Supreme Court rejected the contention saying:

> Having in mind the affiliation of buyer and seller and the *unity of control* thus engendered, we think the position of the [Commission] is sound, . . . Those in control of the situation have combined the interstate carriage of the commodity with its local distribution in *what is in practical effect one organization.*[23]
>
> * * * * * * *
>
> All of these facts so averred in the pleadings would be far more persuasive with respect to the propriety of the rate if the parties were independent of each other and dealing at arm's length. *Where, however, they constitute but*

[22] 285 U.S. 119 (1932).

[23] 285 U.S. 124.

a single interest and involve the embarkation of the total capital in what is in effect one enterprise, the element of double profit and the reasonableness of inter-company charges must necessarily be the subject of inquiry and scrutiny before the question of the lawfulness of the retail rate based thereon can be satisfactorily answered.[34]

Thus, in both *Smith* and *Western*, the inter-corporate relationships were entirely different from those currently before us, for in both cases corporate control vested elsewhere than in the managerial discretion of the reporting company. Consequently, a finding of affiliation was unquestionably correct.

The following year the Commission rendered its decision in the *Louisville Hydro-Electric Co.*[35] case, clearly the most expositive and well-reasoned of all Commission opinions dealing with the rule.[36] The question presented was whether a 7-1/2 percent fee paid to the Byllesby Service Company, affiliated to the licensee through the intricate H. M. Byllesby Company corporate lacework, was properly includable in the "actual legitimate original cost" of the project. A brief discussion will sufficiently portray the circumstances in which the rule was meant to apply, and distinguish those circumstances from the ones presently before us.

The Byllesby Service Company was the managing, directing, constructing and servicing agency of the entire system, and officers and directors were completely intertwined into every branch. Thus, the vice president who signed the contract for Byllesby was at the same time director, assistant secretary and assistant treasurer of the licensee. He was, further, vice president and assistant secretary of the licensee's immediate owner, the Louisville Gas & Electric Company of Delaware, as well as a director, secretary and treasurer of the Standard Company, which controlled Louisville Gas & Electric. Further, the signator for the licensee was, while being its vice president, also a director in both Louisville Gas & Electric and the Standard Company. The contract's attestor was an assistant secretary in all four companies.

The control exercised by Byllesby was not limited to the execution of contracts. It drafted the licensee's articles of incorporation. It prepared, filed, and ramrodded the application before this Commission for a license. After the license was granted, Byllesby then negotiated and consummated the financing, purchasing, construction, and inspection. It also did most of the accounting and legal work, for all of which it made extraordinary profits.[37] The Commission noted, however, that for these profits Byllesby made no investment and it took no risk. It purchased materials and supplies for the licensee's account, and it received a cost-plus return. Further, as the finances of the licensee were under system control, it had no losses due to bad debts, delays in collecting, lawsuits or disputes.

---

[34] *Id.* at 126.

[35] 1 FPC 130 (1933), *supra* note 7.

[36] Prior to *Louisville,* the Commission had rendered two decisions dealing with the no-profits rule. The first was *Alabama Power Co.,* 1 FPC 25 (1932), which involved the propriety of including a 3 percent fee paid to the Dixie Construction Company, an affiliate of the licensee. Affiliation existed at the time construction commenced because Alabama Power solely controlled Dixie. Five months later, however, Alabama Power transferred Dixie to Winona Coal Company. Winona was under the sole control of the Traction Company, which also solely controlled Alabama Power. Further, Alabama Power and Dixie shared common officers and directors. Thus, affiliation was properly found and the fee disallowed. The second case was *Chelan Electric Co.,* 1 FPC 102 (1933). There American Power & Light had lent money to the licensee, its wholly owned subsidiary, at 7 percent, the legal rate in the state wherein the project was located. The Commission properly held that due to the degree of control, affiliation existed and the cost of the money to the parent, and not the legal rate, should control the amount included in the licensee's rate base.

[37] A Federal Trade Commission audit, entered into the record, revealed that for the years 1922–27, Byllesby's net income was $10,794,953.17, representing a profit of 98.5 percent.

With these facts before it the Commission began its total denunciation of the H. M. Byllesby Company system in general, and of the fee contract where involved in particular.

The Commission pointedly commented on the licensee's freedom of action:

> Upon these admitted facts there is no room for quibble or doubt that licensee has no independence of action, but that decisions made by licensee operating company and the Byllesby Service Co. were made by the same group of men, acting in dual, triple, and quadruple capacities, responsive primarily to the holding and controlling interests. This corporate 'family' control was so complete in fact and limited in personnel as to require but 1 room, 1 table, 1 small group of men at 1 point of time to dictate on behalf of the *pater familias* an offer by 1 member and an acceptance by another.[28]

Of the contract there in issue, the Commission said:

> The service contract in question is monopolistic, requiring the exclusive employment by the operating company of the Byllesby Service Co. for a term of 10 years, and provided for a profit to be paid by licensee, a public utility, for the benefit of a private holding company, into whose treasury every dollar of the profits extorted from the operating company is siphoned through the holding company's wholly owned service company. So complete was the reliance on this control, the contract for the construction service, running into several millions of dollars was not entered into until April 15, 1926, prior to which time a large amount of the work for which this fee is claimed had already been done. Contrary to business custom, the officers and directors of the licensee, acting in their capacity, for that company found it unnecessary to have the contract in advance of beginning work to guard against misunderstanding or unreasonable and arbitrary charges, since they were dealing with themselves under the guise of another corporation. To ask the Commission to find that in the making of this fee contract there was any arm's length bargaining, or real independence of action on the part of the licensee, assaults the credulity of the Commission beyond reason.[29]

Numerous other Commission decisions have held the no-profits rule to be applicable,[30] but their detailed discussion would be both repetitive and anticlimatic. It is sufficient merely to note that in every instance the affiliate possessed the power, although that power was not always fully exercised, to totally dominate the managerial policies and decisions of the reporting company. In no instance was a contention of affiliation successfully asserted where the claimed affiliate possessed less than this power. Nor should it have been, not only because a lesser showing would have violated the *St. Croix* test, but also because it would not have equitably supported the drastic consequences necessarily flowing from a finding of affiliation: complete deletion from plant accounts, and, if the finding is made at certification proceedings, disallowance to the companies of any profit.

[28] 1 FPC at 135.

[29] *Id.* at 135–6.

[30] *Colorado Interstate Co.* v. *F.P.C.*, 324 U.S. 581 (1945); *California Oregon Power Co.* v. *F.P.C.*, 150 F. 2d 25 (CA9, 1945) cert. denied, 326 U.S. 781 (1946); *Pennsylvania Power & Light* v. *F.P.C.*, 139 F. 2d 445 (CA3 1943), cert. denied, 321 U.S. 789 (1944); *Louisville Gas & Elec.* v. *F.P.C.*, 129 F. 2d 126 (CA 6, 1942), cert, denied, 318 U.S. 761 (1942); *Alabama Power Co.* v. *McNinch*, 94 F. 2d 601 (CADC 1937), cert. denied, 317 U.S. 652 (1942); *Pacific Power & Light* v. *F.P.C.*, 184 F. 2d 602 (CA 5, 1943); *Minnesota Power & Light*, 3 FPC 388 (1943); *Puget Sound Power & Light*, 3 FPC 231 (1942); *Northwestern Electric Co.*, 3 FPC 83 (1942), affirming 2 FPC 327 (1940).

Reaching the conclusion that no affiliation, either as defined in *St. Croix* or as found in any previous case, existed between Houston Texas and the four interested parties is not determinative of the question of how much profit is properly includable in Houston's plant accounts. As clearly stated in *Pennsylvania Power & Light Co.*, we have a regulatory obligation to test the reasonableness of all claimed costs:

> The word 'legitimate' does involve an element of reasonableness. A claimed cost may be so in excess of the cost of comparable construction or purchase that it raised a question of collusion, fraud or gross neglect which would cast on the licensee the burden of proving the circumstances which would justify the claimed cost, and in the absence of such proof the claim in excess of what is reasonable should be disallowed.[31]

Such questions are, admittedly, raised by the instant facts and thus the last question becomes: Were the profits paid by Houston Texas reasonable?

In answering this, two analyses must be made: First, did the contracts, under which the profits were made, contain standard industry compensatory provisions; and secondly, as a check reference, how did the final costs compare with relevent industry costs?

Industry compensatory clauses are of two varieties. One is a cost-plus provision, which repays the contractor his total construction costs plus either a fixed percentage return on those costs or a lump sum. These provisions insulate the contractor from substantially all risks. In every Commission case applying the no-profits rule, the cost-plus, no-risk method of compensation was employed.

The second method is the fixed-unit method. Here a construction project is either quantitatively or qualitatively categorized into work units which are then prescribed standards of construction and bases of payment. Under this method, the entire risk attendant to bad weather, labor disputes, geological difficulties and rising construction costs fall on the contractor. Assuming no outrageously high unit payments, he is assured of no profit. Contractors can minimize this risk by the inclusion of escalation clauses whereby increased costs are absorbed by the builder. There were no such clauses in any Houston Texas contract. Specifically, Section 7.2 provided:

> It is understood that the unit prices enumerated in the Contract cover and include all of the compensation to be received by Contractor from Company for furnishing necessary materials, labor, tools and equipment, and for performing all work contemplated and embraced under the contract; all overhead, superintendence, labor, use of equipment; all loss or damage arising from the nature of the work or from action of the elements or from any unforseen difficulties which may be encountered during the prosecution of the work until the final acceptance by the Engineer; all risks of every description connected with the prosecution of the work; and all expenses incurred in consequence of the suspensions or discontinuance of the work as herein specified and for completing the work according to the Plans and Specifications.

---

[31] 3 FPC 89, 119 (1942). Although the Commission was here defining the word "legitimate" as used in the Federal Power Act, their interpretation would apply equally to Sec. 6(b) of the Natural Gas Act. See note 7 *supra*.

The contracts entered into by Houston Texas all included this type of compensation provision.[32] Consequently the contracts were, on their face, clearly reasonable.

Although the ambiguous language of Opinion 301 is open to various and conflicting interpretations, one fact is clear: At the time the opinion was rendered, the cost estimates were reasonable.

> Houston Texas has likewise presented evidence pertaining to the engineering feasibility and cost estimates of the project. As to the latter, the evidence supports a finding that its cost estimates for materials and construction compare favorably with present-day costs experienced by other pipeline companies and are reasonable. 16 FPC at 129.

The final prices resulting from these contracts likewise appear to be reasonable. The Coastal Transmission Corporation mainline, a suitable check reference, supports this conclusion.

Concurrent with Houston Texas beginning its construction of the 24-inch Baton Rouge, Louisiana-Florida mainline, Coastal began construction of a similar mainline from Mission, Texas, to Baton Rouge. For the most part, it traversed terrain substantially more amenable to excavation and pipe laying than that crossed by Houston Texas. Consequently, if the unit costs of Florida Gas approximate those of Coastal, which have already been reviewed and approved by the Commission staff, they must be allowed to stand.

Evidence reveals that Houston Texas' unit prices not only approximated Coastal's they were uniformly cheaper. Thus, the unit cost per foot for the 24-inch mainline (which represented 63 percent of Coastal's total facility cost and 74 percent of Houston Texas') was $4.391 for Coastal and $4.363 for Houston Texas. Houston Texas' installation cost per horsepower of $69.39 was likewise cheaper by $3.49.[33] This same relationship was true for rural laterals; Coastal's cost per diameter inch per lineal foot ran 22 cents, while Houston Texas' was only 20.1 cents. Although substantial expert testimony pertinent to the reasonableness of Houston Texas' costs was unfortunately excluded by the Presiding Examiner, and although close scrutiny may have revealed that the Houston Texas mainline could have been more economically constructed,[34] I am persuaded that these costs are not unreasonable. Consequently, I would allow the totality of the profits to remain, as they are now, in the Houston Texas plant accounts.

I conclude by noting that the majority's error of law is compounded by their error of judgment. I have serious apprehension that their decision, which negates

---

[32] Except for Barnard & Burk who were to receive 1 percent of the cost of all pipeline work up to and including $60,000,000 and 3/4 percent of the cost in excess of $60,000,000. They were also to receive 2 percent of the cost of compressor stations, meters, regulator stations, and employee housing facilities. A subsequent agreement set the maximum fee at $865,000.

[33] The completed compressor station cost for Houston Texas ($309.00) ran slightly higher, however, than that for Coastal ($293.00).

[34] The fact that a project could have been more cheaply constructed does not, *per se*, make its costs unreasonable.

> The Commission has carefully reviewed the testimony of all the witnesses with reference to the cost of cutting trees in the pond area, and piling and burning same, *and while there is evidence in the record that this work might have been more economically accomplished, the record shows that the money was* actually spent and paid, and the work done by local contractors or labor employed in the locality of the project on the best terms that licensee secure. Upon these facts shown by the record, the Commission approves the total expenditures. . . . *Florida Power Corp.*, 1 FPC 390, 398 (1937).

the previous definition of affiliation and extends the no-profits rule into an undelineated area, will only have a deleterious effect on the public interest.

This interest has often been served by projects which were the creative progeny of but a few promoters. These promoters, lacking the vertical integration of large companies, were forced to incorporate with scattered interests in order to metamorphose idea into actuality. As was only logical, representatives for these interests often became officers or members of the board of the infant corporation.

Their financial insignificance, however, when coupled with the uncertain prospects for remuneration, made investments of time and capital a substantial risk. As compensation, they were ofttimes given stock options, and, in addition, the right to the construction contracts, at reasonable prices, in the event the project was ultimately certificated. These were the only terms upon which they would consent to invest, and consequently, the only terms under which these valuable projects could have been built.

The day of the pooled-interest project is thus over. This decision will insure projects either being constructed by organizations sufficiently large to absorb the potential loss, or else remaining unconstructed. Neither alternative, I submit, is either dictated by or commensurate with the public interest.

* * * * * * *

Completely aside from my belief that no affiliation within the definition of *St. Croix* exists in this case, there is still another equally persuasive reason why the plant accounts should remain untouched.

Since passage of the Natural Gas Act in 1938, this Commission has repeatedly appeared before Congress for remedial legislation. Although in every instance the plea was made that without congressional assistance we would be ill-equipped to discharge our entrusted responsibilities, the most significant request ever made, or granted, was that which led to the 1942 amendment of Section 7. As originally enacted, Section 7 gave the Federal Power Commission certificate jurisdiction only over facilities used to transport interstate gas to a market already being served by another natural gas company. It was immediately apparent that this was a severe jurisdictional limitation.[illegible] In order to remedy it, Congress was requested to amend Section 7(c) so as to give us certificate jurisdiction over all interstate facilities and, as a concomitant power in a proposed Section 7(e), the power to condition those certificates as the circumstances required.

Thus, in June of 1941, Chairman Olds wrote a letter to Representative Clarence F. Lea, Chairman of the Committee on Interstate and Foreign Commerce on H. R. 4819, the proposed amendment to Section 7. In his letter, Chairman Olds stated:

> **Adequate regulation is obviously not provided unless the Commission has jurisdiction to regulate the construction of the pipeline and control its initial financing as well as to regulate its operation after construction. By the unregulated construction of the pipeline, the public interest may be so disregarded that proper regulation of operation thereafter may prove a difficult matter or may be practically impossible because the construction of the line is uneconomic or costs are inflated. *Regulation should begin with construction of the line, not with operation after construction.***

[illegible] ***E.g., Western Natural Gas Company,*** **Docket No. G–168, and *Independent Natural Gas Company,* Docket No. G–178. (Consolidated into order issued 2 FPC 910 (1941) which dismissed, for want of jurisdiction, applications for certificates of public convenience and necessity to serve the Wisconsin market.)**

H.R. 4819 ultimately became H.R. 5249 which was discussed before the House Committee in July of 1941. At this time, Commissioner Manly further supplemented the above statement of Chairman Olds.

> Commissioner MANLY . . .
>
> Now, what the Commission does under ordinary conditions is to require those conditions to be set forth in the authorization for a certificate that is accepted by the company as a condition precedent to the actual issuance of the certificate, so that in all intents and purposes the company has a right to reject a certificate containing any conditions which are unreasonable, onerous, or have no relevancy to the issue.
>
> Mr. SOUTH. That is what I have in mind. If they are too burdensome, then the application could be withdrawn.
>
> Commissioner MANLY. They could come back before the Commission and ask for a rehearing if they regard the terms and conditions as being onerous.
>
> Mr. SOUTH. As a general proposition, you would say that this is exercised in the public interest for the purpose of broadening the service sought to be rendered; would you go that far?
>
> Commissioner MANLY. I would not quite agree with the latter. *It would be primarily for the purpose of making explicit the conditions under which the certificate is being issued.*[36]

Some three months later, the bill favorably reported out of committee with the following introduction:

> The bill when enacted will have the effect of giving the Commission an opportunity to scrutinize the financial set-up, the adequacy of the gas reserves, the feasibility and adequacy of the proposed services, and the characteristics of the rate structure in connection with the proposed construction or extension *at a time when such vital matters can readily be modified as the public interest may demand.* Without such authority, the Commission may find itself confronted with a situation where it must either accept conditions which appear undesirable in the public interest, *or require, subsequent to construction, changes which may have much more serious practical consequences than they would have had if they had been made before the public was asked to finance the enterprise.*[37]

The amendment was passed the next year.[38]

Given this congressional sanction, the Commission enacted Part 157 of its Regulations. This specifies, in detail, the information required to be filed with certificate applications and is designed to fully apprise the Commission as to whether a project will, in fact, be in the public interest. The filing is recognized as a "forthright obligation of the applicant,"[39] and, as section 157.5(c) makes clear, the Part will be strictly applied in all applications.

---

[36] *Hearing Before the House Committee on Interstate and Foreign Commerce*, 77th Cong., 1st Sess. (1941).

[37] *House Committee on Interstate and Foreign Commerce Report No. 1290 on Amendments to Section 7 of the Natural Gas Act*, 77th Cong., 1st Sess., pp. 2–3 (1941).

[38] Our facility jurisdiction under the Federal Power Act is decidedly narrower. There our certification authority is limited to generating facilities which occupy Government lands, navigable streams, or streams which affect interstate commerce. Consequently, we have neither the opportunity nor the obligation to examine, prior to construction the costs of projects to be located elsewhere even though the resulting energy is to flow in interstate commerce.

[39] Part 157.5(b).

One of the most significant of the Part 157 requirements involves the filing under sections 157.14(a)(4)[40] and 157.14(a)(15)[41], of detailed information concerning any corporate or financial relationships that may exist between the applicant and other persons. The relevance of this information to a section where certificates are granted only if they are in the public interest is clear: such relationships can detrimentally affect this interest and thus, before a certificate should be issued, these relationships should be analyzed in a detail commensurate with that imposed upon the applicant. Following this analysis, a clear, concise decision should be rendered as to whether a relationship existed which would bring any fee payments within the no-profits rule. This is the bare minimum to which applicants are entitled.

There is no doubt that the applicants in G-9262 complied with sub-sections 157.14(a) and 157.14(a)(15). They fully disclosed all financial and corporate relationships existing between the "affiliate" companies and Houston Texas, the proposed contractual arrangements, and the project's estimated cost. Moreover, the applicants explained this information in detail at the hearing.[42] In the event this mass of testimony was overlooked, Green's Fuel, intervenors in Docket No. G-9262, placed the Commission on notice to a possible affiliation issue with the following statement:

> The evidence is clear and undisputed that Houston proposes to let contracts to insiders without competitive bidding for the construction of the line and compressor stations, as well as a supervision and engineering contract.[43]

If this were not enough, a statement of the relevant relationships, as well as concise statements of Houston Texas' intent to enter into contracts with the construction and engineering groups, appeared in their plan of financing, submitted on July 1, 1958, and approved on August 7, 1958. Thus, at three stages of the certification proceedings—pre-hearing, hearing, and post-certification—the Commission had full knowledge of every fact which it now relies upon to substantially alter its original order of December 28, 1956.

What response did the Commission make to this voluminous evidence? Just this: Out of a 29-page opinion, it devoted *one sentence* to an issue that inevitably became, eight years later, the subject of intense, expensive litigation involving almost 6 percent of a company's plant account. This minuscule consideration read:

---

[40] Exhibit D—Subsidiaries and affiliation. If applicant or any of its officers or directors, directly or indirectly, owns, controls, or holds with power to vote, 10 percent or more of the outstanding voting securities of any other person or organized group of persons engaged in production, transportation, distribution, or sale of natural gas, or of any person or organized group of persons engaged in the construction or financing of such enterprises or operations, *a detailed explanation of each such relationship,* including explanation of each such relationship, including the percentage of voting strength represented by such ownership of securities. If any person or organized group of persons, directly or indirectly, owns, controls or holds with power to vote, 10 percent or more of the outstanding voting securities of applicant—*a detailed explanation of each such relationship.*

[41] (15) Exhibit M—Construction, operation, and management. A concise statement setting forth arrangements for supervision, management, engineering, accounting, legal, or other similar service to be rendered in connection with the construction or operation of the project, if not to be performed by employees of applicant, including reference to any existing or contemplated agreements therefor, together with:

(i) A statement showing affiliation between applicant and any parties to such agreements or arrangements. See Exhibit D, paragraph (a)(4) of this section.

(ii) Conformed copies of all construction, engineering, management, and other similar service agreements or contracts in any way operative with respect to construction, operation, or financing of facilities which are the subject of the application or will be applicable under system operations.

[43] Brief for Intervenor, Docket No. G-9262.

> While as we have already stated, the cost of the proposed facilities appears to be reasonable, in view of [the proposed contractual arrangements], this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates of Houston Gas.[44]

The sentence is classically vague. What does it say? Does it say that the disclosed costs were acceptable and only future additions would be scrutinized? Does it say that the *total* project cost would be later scrutinized? What does "scrutinized" mean? Examined again for "reasonableness," which was already found to exist as to the then-known costs, or examined to delete affiliate profits, when all the facts relevant to this issue were then known? Whatever this sentence says, it does *not* say that "we have carefully reviewed the relevant corporate relationships existing between Houston Gas and the construction and engineering firms and find that the fees, proposed to be paid to these firms, will (or will not) come within the 'no profits to affiliates rule.'"

It seems incredible that a Commission, which fought so hard for the power to condition certificates, should have then paid it such lip service. Forgotten were the words of Commissioner Manly, whose advocacy over considerable opposition led to the passage of Section 7(e), that the conditioning power "would be primarily for the purpose of making explicit the conditions under which the certificate is being issued."[45] Discarded was the principle that jurisdiction—here to impose conditions—must carry a commensurate obligation—to impose them at the earliest times. There is little doubt that the obligation exists. Recognizing it, the Supreme Court recently noted that the significance of Section 7(e) is that it gave the Commission conditioning power ". . . *at a time when such vital matters can be readily modified as the public interest may demand.*" (Emphasis in original.) The Court went on to state:

> Clearly, the Commission was given the power to lay down conditions precedent to the entry of natural gas in interstate commerce. Moreover, the Commission has long recognized this *obligation* and has required modification of many tariff and contract provisions as a condition to the granting of a certificate.[46]

By failing to state an affirmative position on the affiliate fee issue, the Commission undoubtedly lulled both the applicants and subsequent investors into the mistaken belief that the fees, thrice disclosed, were legitimate plant account inclusions. Without this belief, this valuable line could never have been financed: the rate base reductions resulting in decreased returns—form an already marginal project—would have made it too assuredly speculative to attract prospective investors.[47] It is the investors, specifically, the holders of the

[45] *Supra*, note 36.

[46] *F.P.C. v. H. L. Hunt*, 84 Sup. Ct. 861, 868 (1964), quoting the *House Committee Report on Interstate and Foreign Commerce No. 1290.* This principle was reiterated in *F.P.C. v. Texaco*, 84 Sup Ct. 1105 (1964).

[47] There is no controversy over the public benefits derived by the line. First, the Florida Railroad & Public Utilities Commission supported the company's position. It noted ". . . Florida Gas has contributed tremendously to the economy and welfare of the State." Exceptions of Intervenors, p. 15. The Florida Commission exercises jurisdiction over the twelve distributor customers of Florida Gas which, in turn, serve 230,000 customers, and the two electric company customers which serve 1,202,000 customers. Secondly, the customers of Florida Gas all supported its position (Record, Intervenor, Appendix B.

5,323,672 outstanding common shares comprising a total equity of $48,724,432, which today's order detrimentally affects. These shareholders, currently saddled with a retained earnings deficit of $5,265,673, will now suffer an increase in this figure to almost $13,500,000 and a decrease in their total equity of almost 16.5 percent. The total result will be to postpone needed expansions, lower Florida Gas' bond rating, further decrease the attractiveness of its common stock, and increase the cost of its money. All of this, of course, will be reflected in higher gas rates.

We have repeatedly stated that our certification implies no guarantee that a project will operate profitably. This disclaimer does not diminish our responsibilities to the general public, including the investing public, to completely dispose of any legal issue raised at the time of certification. We certificate with full knowledge that anything less than complete disposition will be interpreted as tacit approval. This obligation was undiminished in the present case by the presence of a *caveat*, if it can be so graced, obscured deep in the confines of The Houston Corporation stock prospectus issued a year and a half subsequent. Page 22 of that prospectus contained the statement that "[t]he Federal Power Commission has made no determination as to the proper rate base for Coastal or Houston Texas or allowable rate of return thereon (except during the development period to the extent stated under 'Agreements Between Coastal and Houston Texas')." The following sentence said "[t]he Federal Power Commission has determined the rate base of other natural gas companies to be the original cost of the property used or useful in the transportation of natural gas for resale . . ., less depreciation plus a reasonable allowance for working capital." Inasmuch as there was no indication that the rate base properties were not "useful in the transportation of natural gas in interstate commerce," nor any mention of the "no-profits rule as a principle of exclusion from rate bases, the utility of the *caveat* was substantially diminished. This obligation is also undiminished by the recitation of any legal touchstone concerning an overall obligation to consumers. Our moral and legal duty to fully apprise industry applicants of the grounds upon which they are offered a Section 7 certificate, prior to their detrimental reliance thereon, must remain inviolate.

In my view, this case falls squarely within that envisioned by the Oregon Supreme Court when it said:

> The doctrine of "equitable estoppel" or "estoppel in pais" is that a person may be precluded by his . . . silence, when it is his duty to speak, from asserting a right which he otherwise would have had.[illegible]

Consequently, I would hold that this Commission is estopped to expunge now, eight years after the issue was appropriately raised by the applicants but deferred by an either indifferent or indecisive Commission, the questioned fees from the applicant's plant accounts.

Consistent with my dissent in the previous *Cities Service* case, I also dissent to the majority's treatment of the consolidated tax issue.

[illegible] *Marshall* v. *Wilson*, 154 P. 2d 547, 551–52 (1945). For cases holding the doctrine of equitable estoppel applicable against governmental agencies see 2 Davis, Administrative Law, § 17.03 (1958) and 1963 Supplement.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON RECLASSIFICATION OF GAS PLANT ACCOUNTS AND INCOME TAX ACCRUALS

(Issued September 23, 1963)

KURTZ, *Presiding Examiner:* This proceeding arises under the Natural Gas Act and relates to accounting entries required by the uniform system of accounts for natural-gas companies as prescribed by the Federal Power Commission. The issues as to the accounting entries result from the Commission's order of June 8, 1962, accepting a proposed settlement of rate proceedings in which two accounting matters were reserved by the parties for further determination by the Commission. These reserved issues as stated are: (1) the proper cost for accounting purposes under the uniform system of accounts of constructing the facilities of Florida Gas Transmission Company, and (2) the accrual for Federal income taxes on the books of Coastal Transmission Corporation for accounting purposes under the uniform system of accounts.

The first issue involves the Commission staff's determination that the plant accounts of Florida Gas Transmission Company include: (1) a $9,659,183 profit paid to affiliate engineering and construction companies and its classification under the uniform system of accounts, and (2) interest in the amount of $304,950 attributable to this profit. As to the second issue, the staff opposes the recording of these accruals for income tax by Coastal. Intervener Florida Power & Light Company participated in the hearing and also opposed the recording of the accruals by Coastal of the income tax. No position was taken on the first issue. Intervener Florida Railroad and Public Utilities Commission filed a brief, taking the position "that the inclusion of the amounts questioned by the staff in the pipeline company's rate base is proper if the construction costs to the pipeline were reasonable and compare favorably with similar contemporaneous costs to other companies." No position was taken on the second issue.

Florida Gas Transmission Company, including its predecessor companies, is a natural-gas company within the meaning of the Natural Gas Act and, as such, is subject to the jurisdiction of the Federal Power Commission and its accounting requirements. The authority of the Commission to prescribe a system of accounts for natural-gas companies is set out in Section 8(a) of the Natural Gas Act and is a necessary incident of effective regulation. Neither jurisdiction nor the obligation to comply with the prescribed uniform system of accounts is an issue in this proceeding.

Houston Texas Gas and Oil Corporation

On December 28, 1956, the Commission issued to Houston Texas Gas and Oil Corporation (Houston Texas) and Coastal Transmission Corporation (Coastal) certificates of public convenience and necessity[1] authorizing the sale of natural gas and the construction of transmission facilities by Houston Texas extending from Louisiana into Florida at an estimated cost of $94,285,000, and by Coastal from southern Texas to a point of connection with the Houston Texas pipeline in Louisiana at an estimated cost of $54,279,000.

Houston Texas, since March 1957, and Coastal, since June 1958, have been wholly-owned subsidiaries of the Houston Corporation. Houston Texas changed its name to Florida Gas Transmission Company in March 1962. The Houston Corporation changed its name to Florida Gas Company in June 1962. In August 1962 Coastal was merged into Florida Gas Transmission Company. All the events which have given rise to the accounting questions in this proceeding transpired prior to the name change and merger, and reference to the original names are used for clarity and simplicity.

---

[1] 16 FPC 118; *affirmed*, 251 F. 2d 643 (Dec. 4, 1958); cert. denied, 356 U.S. 959 (May 19, 1957).

The Houston Texas project came into being as a result of the combined efforts of Messrs. J. O. Mack, C. C. Barnard, F. E. Stanley, Paul C. Wallack, and John M. Harbert, III, hereinafter sometimes referred to as the promoters. Mr. Mack, of Houston, Texas, desired to promote a pipeline from Louisiana to New York or Chicago and sought to interest others to invest risk capital in such promotion as he lacked experience and financial resources to accomplish such a project. To carry out this promotion he organized in May 1952 the Houston Texas Gas and Oil Company, a Texas corporation with a capitalization of $1,000, and gave publicity to this proposal in trade magazines. Prior to bringing together the above persons he had interested at least two other engineering firms which later withdrew, namely, Fulghrum Contracting Corporation and Petrol-Structors, Inc. Mack was also interested in oil production and several other ventures and his office force consisted of his wife, H. S. Mack, his son-in-law Allen R. Kleinkauf, O. Paul Herzig,[2] and clerical help.

Mr. Barnard of the engineering partnership of Barnard & Burk of Baton Rouge, Louisiana, contacted Mack, whom he had not previously known, in the early spring of 1954. The need for others to join in the promotional venture was recognized by Barnard, who testified:

> When I entered the picture, Houston Texas Gas and Oil Company had no staff of engineers, no lawyers, no construction people, and no labor force. Although Mr. Mack had to that time spent considerable money of his own on this project in the preliminary work, his staff was limited to engineer, Mr. Herzig, and two or three others, including a secretary, and was not able to go further by itself. Mr. Mack had to call on a firm such as ours to provide the engineering resources necessary to develop the project, just as it was necessary that he call on other established companies for the benefits of their particular talents.

In their discussions Barnard suggested the building of a pipeline from Louisiana to the Florida market instead of New York or Chicago, and agreed to make the required market study. If found feasible, it was agreed that he would participate in the promotional stock and perform the necessary consulting and engineering services connected with the construction of the project at a fee comparable to that charged by other engineering firms. Compensation for the above work was dependent upon the financing of the project. It was through Barnard that Mack was placed in contact with Harbert, President of Harbert Construction Company of Birmingham, Alabama.

Mr. Harbert went to Houston, Texas, to discuss with Mack the possibility of getting together a group of persons who would be interested in providing money and talent necessary to design and construct a natural gas pipeline to Florida. This led to an understanding that he would become a part of a group to provide funds to defray the expenses of the preliminary work on the project, have the right to participate in the promotional stock and in the construction of a portion of the line at no more than the going rate for similar work.

Mr. Wallack, President of Walco Engineering & Construction Company of Tulsa, Oklahoma, read in a trade magazine of Mack's plan to construct a pipeline, and in June 1954 he went to Houston to discuss with Mack the possibility of constructing compressor stations on the line. On the plane with Wallack was Stanley, President of Midwestern Constructors, Inc., also of Tulsa, Oklahoma. Wallack met with Mack and was informed of the interest of both Barnard and Harbert in constructing a line to Florida and was given a copy of a market survey prepared by Barnard & Burk. The next day both Wallack and Stanley met with Mack and after discussing the Florida project were asked, and they indicated their willingness, to advance a portion of the preliminary funds together with their experience and time, subject to their confirmation of the Barnard & Burk report, conditioned on the right to participate in the promotional stock and construct a portion of the facilities at the going rate.

---

[2] Formerly President of Petrol-Structors, Inc.

On July 22, 1954, Mack organized the Houston Texas Gas and Oil Corporation of Delaware to become the corporation for carrying out the proposed pipeline project from Louisiana to Florida. The new corporation provided for 2,000,000 authorized shares at a par value of $1.00 each and the right to do business with a paid in capital of $1,000. On August 4, 1954, the certificate of incorporation was amended to provide for 8,000,000 shares at a par value of 25 cents each, and later, on December 8, 1954, it was again amended to provide for a total of 500,000 shares at a par value of $1.00 each, which was increased prior to public financing by 100,000 shares on August 2, 1956.

On August 26, 1955, Houston Texas having created a feasible project, including the obtaining of a gas supply from Coastal, filed its application for a certificate of public convenience and necessity with the Commission. Coastal filed its application on February 8, 1956. The certificates issued to Houston Texas and Coastal on December 28, 1956, did not become final until after certiorari was denied by the United States Supreme Court on May 19, 1958.

The Houston Corporation of Florida was incorporated on March 19, 1957. All of the stock of Houston Texas was exchanged for shares of The Houston Corporation on a share-for-share basis, and after the denial of certiorari, the outstanding common stock of Coastal was exchanged in June 1958 for a new series of common stock of The Houston Corporation, designated as Class A stock. Coastal was 95 percent owned by Delhi-Taylor Oil Company, and the voting rights of the 515,123 shares of Class A stock issued in this exchange were restricted to one-tenth of a vote per share and then to one-fourth of a vote per share 30-days after the public financing.[3] Conversion rights of this Class A stock to common stock were also restricted to prohibit the conversion if it would (a) cause The Houston Corporation, in the opinion of counsel for the corporation, to become a subsidiary of a holding company or subject to a controlling influence within the meaning of the Public Utility Holding Company Act of 1935, or (b) result in any person either directly or indirectly owning, controlling, or holding with power to vote 10 percent or more of the outstanding securities of The Houston Corporation. At the time of the exchange Delhi-Taylor and those persons associated with it, holding 593,385 shares of the stock of The Houston Corporation, were accorded only 20.2 percent of the voting rights of The Houston Corporation. This left the promoters of Houston Texas with voting rights of 57.2 per cent in The Houston Corporation, with the remaining shares held by the bankers and others having voting rights of 22.6 percent.

---

[3] The public financing included the sale of an additional 1,809,400 shares of common stock. The Houston Corporation at the time of public financing also offered 818,333 shares of common stock and 575,869 shares of Class A stock to certain holders of its outstanding common stock and to the holders of its outstanding Class A stock, respectively.

After the public financing had occurred (common stock at $10 per share and the debentures at $100 each)[4] the final contracts for the construction of the Houston Texas pipeline were entered into and approved by Houston Texas.

Construction Profit of $9,659,183: The Commission's staff takes the position that the capitalized profit of $9,659,183[5] realized by the construction and engineering firms of Barnard & Burk, Harbert Construction Company, Walco Engineering & Construction Company, and Midwestern Constructors, Inc. in constructing the Houston Texas pipeline from Louisiana to Florida should be transferred from the gas plant accounts under Account 101, Gas plant in service, to Account 116, Other gas plant adjustments,[6] as not being a proper item of cost to be recorded in the plant accounts of Houston Texas, but rather representing nothing more than affiliated company profits. Houston Texas objects to this classification, contending that no affiliation existed between it and the construction and engineering companies here involved; that even though affiliation did exist the rule of no profits to affiliates should not be invoked as the relationship between Houston Texas and these companies was made known to the Commission at the time of the issuance of the certificate of public convenience and necessity, thus precluding the elimination of the construction profits from the plant accounts. Further, that the payments were reasonable and this standard should be applied to the cost incurred. In addition, Houston Texas contended during the hearing that the profits were not properly computed.

Houston Texas points out that the proper guide for the findings of the relationship of affiliation is control, which is defined as "the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of another," quoting the case of *St. Croix Falls Minnesota Improvement Company*, 3 FPC 13, in which the Commission defined an affiliated company as follows:

> We use the term "affiliated company" as synonymous with the term "associated company" as defined in our system of accounts. The pertinent definitions are contained in definition 5 of the Uniform System of Accounts:
>
> A. "Associated companies" means companies or persons that, directly or indirectly, through one or more intermediaries, control, or are controlled by, or are under common control with, the accounting company.
>
> B. "Control" (including the term "controlling," "controlled by," and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a company, whether such power is exercised through one or more inter-

---

[4] The Prospectus is dated August 19, 1958. The promotional stock was at a subscription price of $1.30 a share.

[5] The item of $9,659.183 represents an adjustment of $5,919,065, which is 30.66% of the payment of $19,305,373 by Houston Texas to the joint venture created by Midwestern and Walco to perform their construction for the period February 1958 through April 1960; an adjustment of $3,082,810, which is 19.82% of the payment of $15,551,123 by Houston Texas to Harbert for the construction period from September 1958 through March 1960; and an adjustment of $657,306, which is 20.55% of the payment of $3,198,239 by Houston Texas to Barnard & Burk for the period from April 1954 through February 1960.

[6] The text of Account 116 provides:

> A. This account shall include the difference between the original cost, estimated if not known, and the book cost of gas plant to the extent that such difference is not properly includible in account 114, Gas Plant Acquisition Adjustments.
>
> B. Amounts included in this account shall be classified in such manner as to show the origin of each amount shall be disposed of as the Commission may approve or direct.

mediary companies, or alone, or in conjunction with, or pursuant to, an agreement, and whether such power is established through a majority or minority ownership or voting of securities, common directors, officers, or stockholders, voting trusts, holding trusts, associated companies, contract, or any other direct or indirect means.

The above definitions of "Associated companies" and "Control" are the same as set forth in the Commission's first uniform system of accounts prescribed for natural-gas companies effective January 1, 1940, and in the subsequent revisions. Likewise, the same definitions are to be found in the Commission's uniform system of accounts prescribed for public utilities and licenses effective January 1, 1937, and in subsequent revisions.[7]

Control is factual and can arise from any means or device whatsoever. In *Rochester Tel. Corp.* v. *United States*, 307 U.S. 125, 145–46, the Supreme Court sustained an order of the Federal Communications Commission holding that the Rochester Telephone Company was under control of the New York Telephone Company and not within the exemption of Section 2(b) of the Communications Act of 1934, which provided that jurisdiction should not extend over any carrier "engaged in interstate or foreign communication solely through physical connection with the facilities of another carrier not directly or indirectly controlling or controlled by, or under direct or indirect common control with, such carrier." In that case, the Court pointed out the organization and financing of Rochester, the dominating circumstances touching voting rights, and that the Executive Committee and Board of Directors were elected by cumulative voting of the common stock, thereby assuring New York five out of 15 members of the Board of Directors and two members in an Executive Committee of five. It went on to state:

> Investing the Commission with the duty of ascertaining "control" of one company by another, Congress did not imply artificial tests of control. This is an issue of fact to be determined by the special circumstances of each case. So long as there is warrant in the record for the judgment of the expert body it must stand. The suggestion that the refusal to regard the New York ownership of only one third of the common stock of the Rochester as conclusive of the former's lack of control of the latter should invalidate the Commission's finding, disregards actualities in such intercorporate relations.

Houston Texas contends that control of the corporation rested with Mack at the time of the meeting of the Board of Directors on December 8, 1954, when the stock subscription agreements and the letters of intent for the engineering and construction of the pipeline were approved, and that neither Stanley, Wallack, Barnard, nor Harbert were in a position to control the corporation. It is also claimed that these persons were not in control at the time of approval of the construction contracts on October 23, 1958. The position of the staff that these persons, together with their firms, were engaged in a point venture to carry the pipeline project through to completion is also rejected by Houston Texas.

The Houston Texas project is the result of a pooling of interests among the promoters for profit to themselves. Mack and members of his firm received money and also profits from promotional stock. The engineering and construction companies received promotional stock and also profits from construction of the project here involved. Each of the promoters took an active part in bringing about the project as Mack had no organization nor the required capital to carry it out. In addition to the advancement of the funds, the promoters contributed their time and money, including that of their firms, in an effort to develop the project from Louisiana to Florida. Barnard, who had done business with the investment firm of Scharff & Jones, in New Orleans, was responsible for bringing them into the venture and they in turn interested Blyth & Company. The formation of a new corporation, the Houston Texas Gas and Oil Corporation, was the suggestion of Stanley on advice of his counsel and concurred in by the others which Mack carried out. Mack had kept incomplete records as to the Houston Texas Gas and Oil Company and the other promoters wanted to start with a "clean slate" as well as having a determination of the value of Mack's services claimed in connection with the Florida market. Stanley testified:

---

[7] As in the *St. Croix* case the term affiliated company is here used as synonymous with the term associated company.

> We suggested to him that a new corporation should be organized, and in doing that with the risk capital coming in we should know from him how much money that he had spent on the development to date, and we should come to some understanding on the value of that work, and he had Mr. Herzig to develop what he thought was the worth of the work they had done, the money that they had spent. As I remember it, that was on the basis that we accepted the value of what had been done by the other company.

Prior thereto Roddy of Scharff & Jones had suggested a new corporation which was not formed until the suggestion by the other promoters. The amendment to the capital structure of Houston Texas on December 8, 1954, was also the result of Mack carrying out the suggestion of the other promoters. In the words of Stanley, "It was suggestions that we made to him and he followed them." The contemplated source of gas supply in Louisiana did not materialize and through Stanley's efforts Coastal expressed an interest in meeting the gas requirements. Thereafter, on September 16, 1954, Stanley, Wallack, and Herbert made their first advancement of funds, being $1,667 each. They also advanced additional funds from time to time to meet the out-of-pocket expenses of the corporation. To secure control over the funds a budget committee was organized and reports were sent to all of the promoters. It was in August 1954 that Mack, as the result of failing health, suggested to Stanley that he assume the responsibility of seeing the venture through to completion.[8] Stanley spent practically all of his time on the project along with Barnard, Harbert, and Wallack. They were acting jointly along with Mack and his employees to make the venture a success. During this time the amount of risk capital to be advanced and the stock participation of the promoters was determined as well as the stock to be set aside for the investment bankers. There was also reached an agreement as to the extent of the participation in the construction of the project. Stanley, having assumed the responsibility of managing the project, brought in his attorney, Theodore Rinehart, of Tulsa, Oklahoma, who was to be named General Counsel and employed to represent Houston Texas before the Commission in its application for a certificate of public convenience and necessity. Rinehart was also to be given a stock option. Rinehart drafted the required minutes including letters of intent covering construction and presented them for adoption at the December 8, 1954, meeting of the Board of Directors of Houston Texas. The promoters knew that this meeting was to carry out through corporate action the oral agreements theretofore reached, and Rinehart acted as Secretary of the meeting. Up to this time no capital had been paid in and no stock had been issued by Houston Texas.

---

[8] J. O. Mack died on May 9, 1955, at the age of 72 years.

The minutes of the December 8, 1954, meeting set forth the participation and interest of the promoters in the venture, as follows: the construction companies of Stanley and Wallack were to be employed to construct the mainline facilities near Bay St. Louis, Mississippi, to Haines City, Florida, together with the compressor stations and other structures; Harbert Construction Company was to be employed to construct the mainline facilities from Haines City to Miami, Florida, including laterals, a compressor station, and other facilities; Barnard & Burk were to be employed as engineers on the overall project; the capital stock of the corporation, as heretofore mentioned, was changed to 500,000 shares at a par value of $1.00 each, and 37-1/2 percent, being 187,500 shares, was issued for the assets of the Houston Texas Gas and Oil Company (Texas), representing claimed advances and services performed by Mack in connection with the Florida venture, and provision was also made for the payment in cash to Mack of an additional sum of $56,250; 21.43 percent, being 107,150 shares, was set aside for the construction companies of Stanley and Wallack; 5.36 percent, being 26,800 shares, for Harbert; and 10.71 percent, being 53,550 shares, for Barnard & Burk. There also was set aside 15 percent, being 75,000 shares, for the investment bankers, and an option to purchase 10 percent, being 50,000 shares, was given to Rinehart, who was named General Counsel. These shares were to be subscribed for at $1.30 each. The Board of Directors of the corporation, consisting of J. O. Mack, Allen R. Kleinkauf, O. Paul Herzig, Frank Roder Smith,[9] and H. S. Mack, who was absent from this meeting, was enlarged to permit the election thereto of Stanley, Wallack, Harbert, and Barnard. Stanley was named Chairman of the company, its chief executive officer charged with the active management of the corporation. Thus, the corporate action, being the approval of the drafted written agreements under like date of December 8, 1954, covered the construction, engineering, and stock subscriptions. The agreement with Mack was not reduced to writing until February 25, 1955.

At the time of this meeting on December 8, 1954, Mack was not in a position to control the group who were acting in common to develop the project. Houston Texas, as such, was not essential but rather the venture depended upon the individuals, who referred to themselves as the founders, promoters, and entrepreneurs. This meeting as mentioned was nothing more than the finalization of the agreements theretofore reached between Stanley, Wallack, Harbert, Barnard, and Mack. Mrs. H. S. Mack, Herzig, and Kleinkauf owed their participation to Mack, and Rinehart to Stanley. Further, Mack's activities in the promotion were being transferred to his wife, Herzig, and Kleinkauf due to his failing health, as evidenced by his failure to attend a meeting in New York on October 27, 1954. Neither did Mrs. Mack attend as she wanted to be home with him. This meeting was an important one and described by Wallack as follows:[10]

> Scharff and Jones, represented by James Roddy, New Orleans, had made arrangements with Mr. Mack to handle the underwriting of this project before Midwestern and Walco came into it. This was apparently larger than Scharff and Jones wished to handle alone. They, therefore, brought Blyth and Company into the project.

---

[9] An old acquaintance of Mack, who had sought to obtain a supply of gas in Louisiana.

[10] Herzig in his testimony stated that he also was present along with Kleinkauff and Rhinehart.

> On October 27, 1954, Messrs. Roddy, Stanley, Barnard, Harbert, and I, representing Houston Texas Gas and Oil Company, met with Paul Conley and Eugene Bashore, with Blyth and Company in New York, to work out arrangements for Blyth and Company to act as underwriters and investment advisers for the project.
>
> Final arrangements were made at this time for each of the participating parties to provide the risk capital by the purchase of stock under stock subscription agreements, and it was agreed that Houston Texas would operate on a budget supervised by those who were investing their money therein. Pursuant to the stock subscription agreement, Midwestern Constructors, Inc., and Walco agreed to purchase, between them, a total of 21.43 percent of the stock of Houston Texas. The balance of the stock to be issued pursuant to the stock subscription agreements was to be purchased by others who did not at that time, or at any other time, have any interest whatsoever in either Midwestern Constructors, Inc., or in Walco.

After the December 8, 1954, meeting, there remained the securing of commitments for the gas supply, markets, financing, and other matters necessary for a feasible project to be presented to the Commission for a certificate of public convenience and necessity. To secure the gas supply from Coastal, a wholly-owned subsidiary of Delhi-Taylor Oil Company, the latter was granted on February 26, 1955, an option to purchase promotional stock on the same basis as offered to the investment bankers. The option of Delhi-Taylor called for 65,218 shares or 13.04 percent of the common stock to be purchased at $1.30 a share. To meet this agreement the stock interest of all the promoters was reduced by a percentage in relation to total subscription, *to-wit:* 24,456 shares from the Mack interests and the remaining 40,762 shares from the other promoters and from the investment houses. In anticipation of Mack's death, a special meeting of the directors of Houston Texas Gas and Oil Company was held on May 1, 1955, and adopted the drafting of minutes prepared by Rinehart, which provided for the distribution of the 187,500 shares of Houston Texas Gas and Oil Corporation's stock held in the name of the company, and to carrying out the dissolution of the company. The 187,500 shares were distributed as follows: 24,456 shares to H. S. Mack as Trustee for release and sale to Coastal; 16,304.4 shares to H. S. Mack; 16,304.4 shares to Allen R. Kleinkauf; 5,077 shares to O. Paul Herzig, 23,076 shares to Barbara Mack Kleinkauf; and 102,282.2 shares to J. O. Mack.

The efforts of the promoters following the December 8, 1954, meeting were described by Stanley as follows:

> I devoted practically my full time during 1955 and 1956 to this project. I devoted all of my efforts in 1957, 1958, 1959, and 1960 to this company.
>
> In 1955, we were faced with the myriad problems attendant upon getting a new pipeline project under way. Although the Phillips decision had made the securing of an adequate gas supply most difficult, we were able to make an agreement with Coastal Transmission Corporation, a company that was 95 percent owned by Delhi-Taylor Oil Corporation, to secure a gas supply. I spent considerable time in this effort.
>
> We had to have additional market surveys made. We had to negotiate with potential buyers of gas. We had to visit municipalities and talk with their Councils. We had to prepare our Application for a Certificate of Public Convenience and Necessity. We had to formulate a plan of financing, and this involved a great amount of negotiation with investment houses. We had to prepare for, and participate in, the hearing on our Application.

> The years 1955 and 1956 required tremendous effort on the part of each of the founders in order to move the project toward a successful conclusion.
>
> In 1957, the company was faced with an appeal from the order granting it its Certificate. As a result of this appeal, a great amount of effort had to be expended to hold the project together. We had problems of keeping the market together, problems of keeping the gas supply together, problems of keeping our suppliers of pipe and other equipment satisfied that ultimately we would be successful, problems of keeping the insurance companies who had committed to purchase our first mortgage pipeline bonds together. These areas that I have mentioned encompass thousands of man hours of work.
>
> The Court appeal also necessitated the generating of more risk capital in order to keep the project alive. Each of the founders invested additional money in the project.

The directors of the Houston Corporation at the time of its organization on March 19, 1957, were the same as the directors of Houston Texas, being Stanley, Wallack, Barnard, Harbert, Rinehart, Herzig, Kleinkauf, and Mrs. Mack. On this same date a meeting of the Board of Directors of Houston Texas was held and the certificate of public convenience and necessity issued to it was accepted, and as to the letter commitments, the following action occurred:

> WHEREAS, letter commitments for engineering of the proposed pipeline of the corporation are held by Barnard & Burk, and letter commitments for the construction work thereon are held by Harbert Construction Company, Midwestern Constructors, Inc., and Walco Engineering and Construction Company, subject to the negotiations of arm's-length contracts therefor,
>
> Upon motion duly made, seconded and carried, it was
>
> RESOLVED, that the president be, and he hereby is authorized to appoint a committee or committees of three members from the board of directors (other than members having interest in such contracts) to carry on the negotiations for such contracts, respectively, subject to submission to and approved by this board of directors, exclusive, in each case, of a director or directors having an interest in any such contract.
>
> Thereupon, the president appointed as the committee to negotiate such contracts with Harbert Construction Company, Midwestern Constructors, Inc. and Walco Engineering and Construction Company, the following members of the board, to-wit: O. Paul Herzig, C. C. Barnard and Theodore Rinehart.
>
> Thereupon, the president appointed as the committee to negotiate such contract with Barnard & Burk, the following members of the board, to-wit: O. Paul Herzig, F. E. Stanley, and Theodore Rinehart.

On October 23, 1958, Stanley reported to the board of The Houston Corporation[11] as to the contracts entered into by its subsidiaries Houston Texas and Coastal for the construction of their respective pipelines. No action was taken on the report nor was any action required. On this same day the Board of Directors of Houston Texas ratified and approved the construction contracts dated October 3, 1958, with Midwestern-Walco Contractors[12] and Harbert Construction

---

[11] Board of Directors of The Houston Corporation in addition to Stanley, the President, consisted of Rhinehart, Barnard, Bowen, Payne, Muller and Martin.

[12] Midwestern Constructors, Inc. and Walco Engineering & Construction Company entered into a joint venture agreement on July 26, 1957, carrying out the letter of intent of December 8, 1954.

Corporation. The minutes of the meeting disclose that Stanley was present but refrained from voting on the resolution. The other members were Rinehart, Herzig, Kleinkauf, Mrs. Mack, Bowen,[13] and Payne.[14] After the adoption of this resolution Sprow[15] and Bennett[16] were elected to the board and became executive vice president and vice president of sales and supply, respectively. All parties to this venture, including Bowen and Payne, knew of the participation of the contractors in forming Houston Texas and of the letters of intent prior to the merger of Coastal into The Houston Corporation. The October 23, 1958, meeting was merely a formality in carrying out such arrangements. At that time the board members who participated in the promotion of Houston Texas were still in control of that corporation.[17]

Houston Texas here contends that the letters of intent were not binding obligations. The short answer to this is that all parties, including the management of The Houston Corporation, considered them as an obligation of Houston Texas and so honored them. The outside construction and engineering firms that contacted Stanley in 1955 and 1956 were advised that Houston Texas had a complete organization of engineers, investment advisers and management personnel, as well as the entire footage of the pipeline being contracted for by Midwestern Constructors, Inc., Walco Engineering and Construction Company and Harbert Construction Corporation, and such firms would do all the work. As to the engineering, they were advised that such work had been awarded to Barnard & Burk. The *Prospectus* of The Houston Corporation of August 19, 1958, recited:

> Barnard and Burk Pipeline Engineering Company, Inc., through assignment from Barnard & Burk, has a letter commitment from Houston Texas dated December 8, 1954, by the terms of which Houston Texas has agreed to employ it as engineers for the construction of its portion of the Initial Pipeline System under a contract to be negotiated and to contain terms analogous to, and providing engineering fees no higher than in, and arm's-length contract for similar engineering services under similar circumstances.
>
> * * * * * *
>
> Houston Texas has also agreed, by letter commitments dated December 8, 1954, to employ Midwestern Constructors, Inc. and Walco Engineering & Construction Company to construct its portion of the Initial Pipeline System from the point of origin to Kissimee, Florida, and the Harbert Construction Corporation to construct the remaining portion. Each of these contracts, to be negotiated, is to be on terms analogous to, and providing a maximum

---

[13] W. J. Bowen participated in the development of Coastal and at this time was a director and senior vice president of The Houston Corporation, and a vice president of Houston Texas since June 1958, at which time the Coastal stock, including the shares held by Bowen, was transferred to The Houston Corporation. He was also president of Coastal since August 1956, therefore serving as vice-president since its organization in 1954. Prior thereto he was employed by Delhi-Taylor Oil Company.

[14] Leon M. Payne, a partner in the law firm of Andrews, Kurth, Campbell & Bradley, participated in the development of Coastal and at the time was a director of The Houston Corporation, a director and officer of Coastal, and a director of Houston Texas since June 1958, the time of transfer by Coastal of its stock to The Houston Corporation, including the stock held by Payne.

[15] Dwight B. Sprow prior to being employed on October 1, 1958, by Houston Texas was vice president in charge of operations for Natural Gas Pipeline Company of America, having first considered employment by Houston Texas in January 1957 and final arrangements for such employment were completed in June 1958.

[16] G. B. Bennett, formerly with Sun Oil Company.

[17] Barnard and Harbert who went off the Board of Directors of both Houston Texas and The Houston Corporation in 1958 returned to the board in 1960.

cost no higher than in, an arms length contract for similar work under similar circumstances.

The extent to which the agreements between the promoters of Houston Texas were honored and the letters of intent considered binding is shown by arrangements that were agreed to with Barnard & Burk. Stanley testified:

Q. You served on the committee that negotiated the definitive contracts with Barnard and Burk, is that correct, Mr. Stanley?

A. That is right. That contract was never brought to a complete definitive contract. There were certain minor variations that were never agreed on and we operated on the structure of the letter of intent.

The obligation between Barnard & Burk and Houston Texas relating to the engineering was described by Barnard as follows:

Q. During the period 1954 through 1959, how much time did you personally spend on work for the Houston Texas project?

A. I spent practically all of my time during this period.

Q. Did your company ever receive a definitive contract as called for by your Letter Agreement, dated December 8, 1954?

A. No.

Q. How, then, were your obligations and those of Houston Texas governed?

A. Both of us acted within the terms of the Appendix to the Letter Agreement, except as to the amount of fee my company was to receive from Houston Texas.

Q. Please explain what you mean.

A. The arrangements with respect to the fee to be paid my organization had been arrived at in the late summer of 1954, and were set forth in the Appendix to the Letter Agreement. The rates set out therein were reasonable and in line with the going rate for this type of service; in fact, they were less than we charged on other projects and were less than the fees which other engineering firms were charging at the time. As is shown on the Appendix to the Letter Agreement, Barnard and Burk was to receive one per cent on the first $60 million of pipeline work and 3/4 of one per cent on pipeline work in excess of $60 million. These fees were testified to in the Certificate hearing. Because of the delay in getting the project started, which delay had been occasioned by the appeal from the Commission's order granting the Certificate, costs of pipe and other material and of labor had gone up. While Barnard and Burk was to get 3/4 of one per cent on pipeline work in excess of $60 million, I orally agreed with Houston Texas, either in 1957 or early 1958, that Barnard and Burk's fee would be computed upon, and limited by, the estimates of cost given in the hearing.

Houston Texas claims that the manner in which the negotiations relating to the contracts were conducted between it and the construction engineering companies showed that neither the persons nor the companies involved, individually or acting together, controlled Houston Texas. The contract negotiations carried out the letters of intent dated December 8, 1954, in which the relationship between the promoters here involved and Houston Texas was recognized. Such letters of intent recited that the contracts were to be on "terms analagous to but incorporating a cost no higher than an arm's-length contract for similar work under similar circumstances." In the *Prospectus* of The Houston Corporation, under the *Management and Control Section*, reference was made to this recital and that the work was to be performed by these companies.

Stanley defined an arm's-length contract as follows:

> As I understand an arm's-length contract, it is one that is negotiated by two parties or two companies on a fair approach as to costs for doing that work, and in our interpretation of an arm's-length contract it was to be negotiated by staff and members of the board of directors that had no connection with the construction companies.

This definition does not take into account the need for independent parties to the contract, nor can it be said that the members of the negotiating committee were not associated together with the construction companies in this joint venture. As to the construction contracts, the forms including specifications were prepared by Herzig, Rinehart and Sprow and then passed in by Stanley, who in turn forwarded such contracts to the other directors. The pricing of the work in the construction contracts was at a negotiated price between the committee and the construction firms which in turn was submitted to the Board of Directors of Houston Texas for ratification. Herzig claimed to have received bids from outside firms relating to the construction work for the purpose of substantiating the price. The work to be performed was not advertized for bids nor were final bids called for by which the work would be awarded, except for the river crossings and three lateral lines. No attempt was made by the holders of the letters of intent to perform work under contract with Houston Texas outside that called for by such letters. Giving consideration to the restrictions placed on the negotiators and their relationship to the contractors as heretofore referred to, it is apparent that the above contracts were not entered into at arm's-length. The condition that the contracts be on terms analogous to but incorporating a cost no higher than an arm's-length contract for similar work under similar circumstances in the letters of intent were only a guide to keep one promoter from being favored over another. This proviso, together with other above-mentioned acts by the promoters, discloses an awareness of the affiliation and an attempt to distort its significance.

The promoters had to keep the costs within the estimates on which the feasibility of the project depended.[18] It was recognized from the beginning that the feasibility of the project depended upon the delivery of gas at a certain price to the Florida markets in order to meet the competition from other fuels. Other proposals to build a natural gas pipeline to the Florida markets had been abandoned by reason of a failure to meet the competitive fuel costs. The bond purchasers required a certificate from an independent engineering firm that in such firm's opinion the pipeline could be constructed and placed in operation by June 1, 1959, and within such cost estimate. If any increase in cost did occur it had to be met by additional shares of stock or additional interim subordinated notes at least equal to such cost increase. The evidence offered as to the award of certain limited construction to outside firms is far from persuasive, especially with the contractors faced with a severe completion schedule.

Houston Texas raises two additional issues. It contends that the rule of no profits to affiliates should not be applied but rather validity of the amounts should rest on a standard of reasonableness and that such standard should be applied as full disclosure of the relationship between the contractors was made to the Commission at the time of the certificate application.

In certificate proceedings the Commission does not necessarily pass on each issue raised which is not essential to the issuance thereof if a delay would jeopardize a feasible project. Even in the rate cases, as here, issues are reserved for further proceedings. Houston Texas at the time of the certificate proceeding urged that a decision be rendered prior to December 31, 1956,"[19] as its gas supply thereafter would be placed in jeopardy. The determination of cost issues required time to carefully review the facts surrounding the transactions as evidenced by this proceeding in which the issue was raised by stipulation on June 8, 1962, and the hearing commenced on December 17, 1962, and was concluded on March 1, 1963, after specified recesses requested by the parties. The final briefs were filed on June 12, 1963. The extent of the Staff's review and purpose in cost cases was testified to in this proceeding by a Commission accountant, as follows:

---

[18] Houston Texas estimated its construction cost at the time of the certificate hearing to be $94,285,000, and at the time of financing to be $102,586,000. The reported cost was $112,439,325.

> Q. Did you participate in a field study of Houston Texas Gas and Oil Corporation's books of accounts?
>
> A. Yes, as part of my duties as Washington Supervisor of the Original Cost Section of the Division of Accounts I made several trips to St. Petersburg, Florida, and as late as last October, I made a trip to Winter Park, Florida."
>
> * * * * * *
>
> Q. Mr. Heim, what was the purpose of this original cost investigation?
>
> A. Among other things, the purpose of the investigation was to obtain the facts to the relationship of the construction and engineering firms that constructed the pipeline facilities for the Corporation. In other words, we attempted to ascertain whether or not this relationship was one that prevented the Corporation from exercising its independence in choosing the contractors and engineers for constructing its facilities and, further, we wanted to ascertain whether or not the contracts entered into by the Corporation for constructing its facilities were the result of arm's-length bargaining. To achieve this purpose, we examined all of the available books and records of the Corporation pertaining to its history, including the history of the Company. I might add here that our information on the Company is minimal inasmuch as the full set of minutes of the Company were not available to the staff.
>
> * * * * * *
>
> Q. What did the facts of this original cost investigation disclose as to the relationship of certain engineering and construction firms with the corporation in relation to its plant accounts as recorded under this Commission Uniform System of Accounts?
>
> A. The investigation disclosed that a relationship existed between the Corporation and Barnard & Burk, partnership, and Barnard & Burk Pipeline Engineering, Inc. (hereinafter jointly designated as 'Barnard & Burk'), Harbert Construction Corporation (hereinafter designated as 'Harbert'), and Midwestern Contractors, Inc., and Walco Engineering and Construction Company (hereinafter designated jointly as 'Midwestern-Walco'), which relationship warrants, in my opinion, an adjustment of the Corporation's plant accounts under the Uniform System of Accounts. The basis for my opinion will be discussed after I present the relevant facts disclosed by this investigation.

---

[19] Oral argument was held in the certificate proceeding before the Commission on December 21, 1956 and Opinion issued on December 28, 1956, designated as No. 301, 16 FPC 118.

Houston Texas was placed on notice that the Commission was not passing on its claimed cost of plant in its Opinion No. 301 relating to the certificate proceeding, which provided (16 FPC 118, 142):

> Finally, it appears that the labor necessary for construction of the facilities of Houston Gas will be furnished by three construction companies, the president of each of which is an official and director of Houston Gas and that two of these construction companies own blocks of Houston Gas stock. Furthermore, a member of the firm of engineers which will supervise the construction and operation of the pipeline is also a vice president and director of Houston Gas. While as we have already stated, the cost of the proposed facilities appears to be reasonable, in view of this fact, this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates of Houston Gas.

In recognition of the above provision, Houston Texas, in its Prospectus of August 19, 1958, stated:

> The Federal Power Commission has made no determination as to the proper rate base for Coastal or Houston Texas or allowable rate of return thereon (except during the development period to the extent stated under 'Agreements Between Coastal and Houston Texas'). The Federal Power Commission has determined the rate base or other natural gas companies to be the original cost of the property used or useful in the transportation of natural gas for resale to the person first devoting such property to that service, less depreciation plus a reasonable allowance for working capital.

Even if the Commission had not placed Houston Texas on notice, it can at any time determine the proper accounting and require compliance with its orders. Accounting control is a continuous process and is basic to regulation under the Natural Gas Act, as evidenced by Sections 8, 10, and 16 thereof.

The Commission's accounting orders as an aid to its functions under the Natural Gas Act are not *res judicata*. By Section 16 of the Natural Gas Act the Commission is given power to issue such orders as are necessary or appropriate to carrying out its functions. In *Niagara Mohawk Power Corporation* v. *F.P.C.*, 202 F. 2d 190, 198, *aff'd.* 347 U.S. 239, the Court of Appeals for the District of Columbia stated:

> This court, speaking through Chief Justice Groner in *Churchill Tabernacle* v. *Federal Communications Commission*, 1947, 81 U.S. App. D.C. 411, 160 F. 2d 244, 246, described as well settled the doctrine that *res judicata* and equitable estoppel do not ordinarily apply to decisions of administrative tribunals.

The distinction between this proceeding and those to which the doctrine of *res judicata* is applicable is set forth in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 289, 292, wherein the Court quoted from Judge Learned Hand's decision in *United States Feldspar Corporation* v. *United States*, D.C.N.Y. 1930, 38 F. 2d 91, 95, and pointed out as follows:

> "No estoppel is relevant upon that inquiry, no inconsistency important, except as it helps to ascertain the very truth; the inquiry is not to be assimilated to the ordinary suit inter partes, where no more is at stake than the settlement of a private dispute." In a situation such as this the Commission is exercising delegated legislative power to make a rule to guide the conduct of the parties in the future. It is not exercising quasi-

judicial power to determine past or present rights or liabilities, as was done in the case of In re *Federal Water & Gas Corp.*, 3 Cir., 1951, 188 F. 2d 100, certiorari denied *Cherney Corp.* v. *Securities & Exchange Comm.*, 341 U.S. 953, 71 S.Ct. 1018, 95 L.Ed. 1375, in which this court did apply the doctrine of res judicata. That case, upon which Panhandle relies, has no relevance here.

In *National Labor Relations Board* v. *Baltimore T. Co.*, 140 F. 2d 51, 54, cert. denied, 321 U.S. 795, the Court of Appeals for the Fourth Circuit, on the question of estoppel, stated:

> Whatever may be the effect of quasi-judicial determinations of administrative agencies (*Cf. Arizona Grocery Co.* v. *Atchison, etc., R. Co.*, 284 U.S. 370, 389, 52 S.Ct. 183, 76 L.Ed. 348), it is well settled that the principle of res judicata has no application to their exercise of other powers, 30 Am.Jur. p. 930; *Pearson* v. *Williams*, 202 U.S. 281, 26 S.Ct. 608, 50 L.Ed. 1029; *Tagg Bros. & Moorehead* v. *United States*, 280 U.S. 420, 445, 50 S.Ct. 220, 74 L.Ed. 524; *State Corp. Comm.* v. *Wichita Gas Co.*, 290 U.S. 561, 569, 54 S.Ct. 321, 78 L.Ed. 500; *St. Joseph Stock Yards Co.* v. *United States*, 298 U.S. 38, 64, 56 S.Ct. 720, 80 L.Ed. 1033. An administrative agency, charged with the protection of the public interest, is certainly not precluded from taking appropriate action to that end because of mistaken action on its part in the past *Cf. Federal Communications Commission* v. *Pottsville Broadcasting Co.*, 309 U.S. 134, 145, 60 S.Ct. 437, 84 L.Ed. 656; *Houghton* v. *Payne*, 194 U.S. 88, 100, 24 S.Ct. 590, 48 L.Ed. 888. Nor can the principles of equitable estoppel be applied to deprive the public of the protection of a statute because of mistaken action or lack of action on the part of public officials. *United States* v. *San Francisco*, 310 U.S. 16, 32, 60 S.Ct. 749, 84 L.Ed. 1050; *Utah Power & Light Co.* v. *United States*, 243 U.S. 389, 409, 37 S.Ct. 387, 61 L.Ed. 791; *United States* v. *City of Greenville*, 4 Cir., 118 F.2d 963, 966.

The argument that the Commission, in its Opinion No. 301, *supra*, stated that the cost of the proposed facilities appears reasonable and thus decided that the standard of reasonableness for accounting purposes applies to the accounts of Houston Texas misconstrues the purpose of such determination in that opinion. The Commission was there faced with a determination as to the feasibility of the proposed project as presented by Houston Texas. This proceeding is to determine the proper accounting for expenditures on which future regulation by the Commission rests. To follow the Houston Texas argument would require the Commission to forsake its long-established cost standard for accounting control, and accept the contention of Houston Texas' witness Dr. W. A. Paton,[30] that the standard in transactions between affiliated companies should be the market value of the services performed.

The reasonableness of the value of services as a standard for affiliated company payments has heretofore been advanced by Paton before this Commission and rejected in *St. Croix Falls, Minnesota Improvement Company*, 3 FPC 13 (1942); *The California Oregon Power Company*, 3 FPC 368 (1943), aff'd. 150 F. 2d 25, cert. den. 326 U.S. 781; *The Montana Power Company*, 4 FPC 213 (1945); and *Arkansas Power and Light Company*, 8 FPC 106 (1949), aff'd. 185 F. 2d 751, cert. den. 341 U.S. 909.

In further support of its claim that the Commission's uniform system of accounts does not support the disallowance of profits to affiliates as not being actual legitimate costs since they did not arise in an arm's-length transaction, Houston Texas refers to an article by Randall LeBoeuf appearing in The George Washington Law Review, Volume 14, pages 174 190, under date of December 1945. Mr. LeBoeuf appeared in several proceedings before the Commission, including the *Niagara Falls Power Company, Licensee,* 3 FPC 207, aff'd. 137 F. 2d 787, cert. den. 320 U.S. 792, in which intercompany construction profits were disallowed, and it was held therein that a pooling of interests did not represent an arm's-length transaction. He was also counsel in the accounting case of *Public Service Electric & Gas Company,* in which an order to show cause was entered on November 2, 1943 (4 FPC 400) and an order issued approving and directing disposition of amounts classified as plant acquisition adjustments and plant adjustments was entered on October 5, 1945 (4 FPC 1058). In this proceeding the company, after hearing and oral argument, filed journal entries further revising its reclassification and original cost studies under the uniform system of accounts, which resulted in the above order disposing of $57,926,685 from its Plant Accounts.

---

[30] A controversial figure, see "The Accounting Emphasis in Public Utility Control" by Will-A. Clader, Public Utilities Fortnightly October 26, 1944.

A more informative article appears in the same publication of The George Washington Law Review by Eric L. Kohler, at page 152, entitled "Development of Accounting for Regulatory Purposes By the Federal Power Commission." This author points out, which might well apply to both Paton and LeBoeuf that accounting as it has been practiced by the Commission in recent years has inspired a good deal of angry rhetoric. This article briefly covers the Commission's accounting policies and its functions thereunder. It also refers to the above-mentioned *Montana Power Company* case and to Houston Texas' witness Paton, as follows (p. 170):

> In the *Montana* case* a number of professional accountants testifying for the company brought out clearly the lack of principles and standards among accountants in interpreting the meaning of 'value' at the time of an exchange of assets for stock. The witnesses indicated their approval of recorded amounts at the time of the transfer, with but superficial evidence in support of figures in excess of original cost. They indicated no distinctions between the judgments that should be applied to the paid-in values of utilities, particularly in transactions between affiliates,** and those of competitive commercial enterprises. To one familiar with the subject-matter developed during the investigation of the Federal Trade Commission, it seems all too obvious that, prior to the enactment of the 1935 legislation, the appearance of arm's-length transactions either between affiliates or unrelated companies more often than not gave no clue to their real meaning, and that to accept them unquestioningly at their face value would surely defeat the purpose for which the Federal Power Commission was established—that purpose being to rid the industry of its existing write-ups and to see to it that no more of them occurred. If at times the remedy adopted has seemed a bit too drastic, especially where the significance of transactions has been dimmed by age, it should be recalled that the evils which the 1935 legislation sought to correct were so widespread as to be almost universal, and that, at the same time, the practical effects of applying the remedy will not be found to be as severe as at first supposed.

---

*In the Matter of Montana Power Co., F.P.C. Op. No. 120 (1945).

**Professor Paton would put the transactions of affiliates on the same basis as those of independent parties. Paton, *Transactions Between Affiliates* (1945) 20 THE ACCOUNTING REVIEW 256. He gives no weight to consumer interest in such transactions.

The above-mentioned *Montana Power Company* decision, 4 FPC 213, involved a reclassification under the Commission's uniform system of accounts in which it was held that evidence of value was wholly immaterial in the determination of costs in transactions between affiliates which arose out of a pooling of interests. In *Pennsylvania Water & Power Co.*, 8 FPC 1, 27, 28, *aff'd.* 193 F. 2d 230, 343, U.S. 414, a rate proceeding in which the Commission had before it the question of plant costs arising from a pooling of interests, it was held that the fair market value of properties had no relation to cost and was entitled to no weight. Further pointing out that under its no-profit-to-affiliates ruled profits resulting to a person in control or sharing control are not actual legitimate original cost since they did not arise in an arm's-length transaction.

The standard of costs as set forth in the Commission's uniform system of accounts, which determines the propriety of payments distinguishes between contracts with affiliated interests and those entered into with independent organizations on the basis of arm's-length bargaining. Its determination rests on costs to the affiliated company and offers a reasonable basis for eliminating abuses. As heretofore pointed out, it is not enough to show that the prices charged by such companies are no higher than those which would have been incurred had the work been done otherwise under the Commission's standard of costs in which the value of reasonableness of the service is not accepted as a measure of actual costs. The Commission as far back as 1933 has held that the "reasonableness" of such affiliated payments is immaterial. *Louisville Hydro-Electric Company, Licensee*, 1 FPC 130, 139.

The allowable cost to Houston Texas for construction work must be limited to the expenses actually incurred by the engineering and construction affiliates. This is in line with the Commission's consistent exclusion of profits to affiliates from plant accounts and an unbroken line of court decisions upholding such Commission action.

Interest on Construction, $304,950: The interest on construction relating to the affiliated profit of $9,659,183 was computed by the Commission's accountant to be $304,950. This computation is not questioned.

Disposition of Amounts in Account 116, Other gas plant adjustments: The construction profit of $9,659,183 and interest on construction of $304,950 attributable thereto are classifiable in the above-referred to Account 116, Other gas plant adjustments, and as such are subject to disposition pursuant to the provisions of this account. The Commission's accountant recommends that the amounts be disposed of by a charge to earned surplus. Florida Gas Transmission Company did not submit a plan of disposition.

Claim For Additional Allowance:

During the hearing Houston Texas introduced exhibits and testimony claiming an additional allowance for general and administrative expenses incurred on its behalf by Harbert Construction Corporation in the amount of $312,809 for the years 1954 through 1957; by Midwestern Constructors, Inc. in an amount of $953,243 for the years 1954 through 1960; and by Walco Engineering & Construction Company in an amount of $456,586 for the years 1954 through 1960. While this claim for additional allowances has not been referred to in Houston Texas' briefs filed in this proceeding, it should be noted that these amounts are not reflected on the books of Houston Texas. The Commission's accountant dealt with only the recorded amounts in his reclassification.

The Commission's uniform system of accounts provides that each natural-gas company shall classify its gas plant in accordance with the gas plant accounts prescribed therein, and reflect in its books of account the original cost to the natural-gas company of its gas plant thus determined. This proceeding, as far as the system of accounts is concerned, is a reclassification of the amounts already recorded in the natural-gas company's plant accounts. The cost on the books is regrouped in the interest of obtaining more and better information, thus paving the way for better regulatory action. The uniform system of accounts does not provide for reaccounting. No claim is advanced that the failure to record these amounts on the books of Houston Texas was the result of an accounting error. Genuine accounting errors should always be corrected, but once costs have been recorded on the books in the exercise of allowable discretions and no accounting error is involved, that cost is not to be recomputed.

The Commission has heretofore passed on this same question in *Northwestern Electric Company*, 2 FPC 327, 333, and denied the right of the company to reaccount for expenses not appearing on its books. On appeal, *Northwestern Electric Co.* v. *Federal Power Commission*, 125 F. 2d 882, 887, the Court on this question stated:

> There is no contention that the interest item could not have been properly included in the accounts at the time when they were born. Respondent's view is that the system it prescribed contemplated reclassification of old accounts in order that those items which did not represent 'original cost' could be eliminated or corrected, and that the system did not, does not, and should not contemplate the inclusion of items which had never appeared on the old accounts. The Commission, having power to prescribe a system, likewise has power to determine the extent of the system. In determining the extent of the system, the Commission reached the conclusion that "retroactive accounting for indefinite periods in the past" would lead to chaos in accounting rather than to a desired end of finality. We think a reasonable man could take that view, and therefore the order, with respect to that item must be sustained.

Coastal—Income Tax Accruals

The second issue in this proceeding, set forth in the Commission's order of June 8, 1962, involves the accrual for Federal income taxes on the books of Coastal for accounting purposes under the uniform system of accounts. This issue arose from the stipulation attached to said order, which in part provides:

> RESERVED ACCOUNTING QUESTIONS
>
> During the pendency of these proceedings, two accounting questions arose; one, an original cost question relating to Florida Gas; and two, the accrual by Coastal of Federal income taxes. The parties hereto agree that such accounting questions shall be considered as reserved issues to be settled or determined in accordance with the procedure set forth below. All rights of any party to these proceedings to participate in the disposition of these questions shall be fully preserved.

Coastal began to accrue on its books amounts of Federal income taxes in 1961, and for the months of May 1961 through August 1962 it had accrued $1,737,000. Coastal did not pay or owe to the Federal government the taxes so accrued on its books. The entries were recorded under the uniform system of accounts for natural-gas companies, effective January 1, 1961, as an operating expense in Account 409, Income taxes, and in the Balance Sheet Account 236, Taxes accrued. Insofar as material here, the Accounts 236 and 409 provide:

> 409. Income taxes.
>
> A. This account shall include the amount of state and federal taxes on income properly accruable during the period covered by the income statement to meet the actual liability for such taxes. Concurrent credits for the tax accruals shall be made to account 236, Taxes Accrued, and as the exact amount of taxes becomes known, the current tax accruals shall be adjusted accordingly so that this account ,as nearly as can be ascertained shall include the actual taxes payable which are chargeable to utility operations.
>
> B. The accruals for income taxes shall be apportioned among utility departments and nonutility operations so that, as nearly as practicable, each tax shall be included in the expenses of the utility department or nonutility operation, the income from which gave rise to the tax.
>
> 236. Taxes accrued.
>
> A. This account shall be credited with the amount of taxes accrued during the accounting period, corresponding debits being made to the appropriate accounts for tax charges. Such credits may be based upon estimates, but from time to time during the year as the facts become known, the amount of the periodic credits shall be adjusted so as to include as nearly as can be determined in each year the taxes applicable thereto. Any amount representing a prepayment of taxes applicable to the period subsequent to the date of the balance sheet, shall be shown under account 165, Prepayments.

Coastal began operations in 1959 and was merged into Florida Gas Transmission Company (formerly Houston Texas) on August 31, 1962, pursuant to a Commission order permitting the acquisition by merger, issued August 3, 1962. (28 FPC 279.) The Houston Corporation, as permitted by the Internal Revenue Code, filed a consolidated income tax return which included the above wholly-owned subsidiaries for each of the years 1959 through 1961, and as a result of offsetting losses no income taxes were due or payable. The above accounts limit the accruals to taxes that are actually payable. The tax liability for a group of corporations filing a consolidated tax return is computed solely on the basis of the net taxable income of the consolidated group as a whole. Inasmuch as the consolidated tax returns filed by The Houston Corporation have always reflected a tax loss for the consolidated group no tax liability has been incurred by the consolidated group. Therefore, the accruals on Coastal's books beginning in May 1961 were a violation of the uniform system of accounts. This question has been directly passed on by the Commission on December 12, 1961, in *Northern Natural Gas Company*, 26 FPC 841. The *Northern* case dealt with the limited question of interpretation for accounting purposes of the instructions for reporting monthly accruals of Federal income taxes, which is the issue here. During 1957 and 1958 Northern accrued on its books Federal income taxes calculated on the basis of its filing separate income tax returns, which is the procedure followed by Coastal to justify its accurals. In 1958 Northern elected to file a consolidated income tax return with its subsidiary Northern Natural Producing Company for the year 1957 and subsequent years. Through the filing of a consolidated return Northern utilized currently the tax losses experienced by its subsidiary, and therefore paid substantially less taxes than it had debited to Account 507 and credited to Account 228.[21] The Commission concluded that Northern's accrual of taxes on the basis of separate income tax filing was improper and ordered Northern to file corrected memorandum entries of these accounts reflecting accrued taxes paid.

Florida Gas seeks to enlarge the scope of this hearing to include considerations as to rates charged for certain direct sales over which the Commission has no jurisdiction, claiming that if the entries here in question are allowed it will secure a better price for such gas sold.[22] Thus the company seeks to have destroyed the validity of the cost concept of the Commission's uniform system of accounts which are a necessary incident of effective regulation, for its own convenience. The issue as to charges for such direct sales is not here involved and is outside the Commission's jurisdiction. Further, there is no evidence in this record that such direct sales are not profitable for Florida Gas no matter how the uniform system of accounts is interpreted.[23]

The Commission's Deputy Chief Accountant, taking exception to the contentions of the Company's witnesses, pointed out that only actual taxes payable are properly recorded under the uniform system of accounts and as Coastal's tax liability is determined from the consolidated return, which discloses no taxes due or owing, the accrual is nothing more than a misstated income and a type of write-up which violates the cost concept of the uniform system of accounts, and stated:

> I do not believe the integrity of the uniform system of accounts should be violated to accommodate a transaction admittedly outside the Commission's jurisdiction. The agreements referred to by Mr. Shanahan [Respondent's witness] apparently were entered into voluntarily and not responsive to a Commission requirement. Since nonjurisdictional transactions are involved these would be a poor base for change of a basic concept under the Commission's uniform system of accounts even were there merit to the suggested change.

Additional Findings and Conclusions

Upon consideration of the record and the briefs filed in this proceeding, it is further found and concluded, that:

(1) The engineering and construction firms of Barnard & Burk, Harbert Construction Company, Midwestern Constructors, Inc., and Walco Engineering & Construction Company, by the pooling of their interests in the promotion of Houston Texas, became a part of an affiliated group under common control as to their participation therein, and as such were associated companies as defined in the Commission's uniform system of accounts.

(2) By reason of the transactions between Houston Texas and the firms of Barnard & Burk, Harbert Construction Company, Midwestern Constructors,

---

[21] Comparable operating expense and balance sheet accounts to Accounts 409, Income taxes, and 236, Taxes accrued, before revision of the uniform system of accounts effective January 1, 1961.

[22] Florida Gas makes a number of direct sales to utilities and others for their own use and consumption for which the charges are related to its record accounting.

[23] In the recent decision in *Cities Service Gas Company*, Opinion No. 396, issued July 15, 1963, 30 FPC 158, involving the consolidated tax issue in a rate proceeding, the Commission stated: The starting point in resolving the consolidated tax issue is the amount of the consolidated tax payment. This is the only real cost which was incurred by Gas Company in conjunction with the other Cities Service affiliates.

Inc., and Walco Engineering and Construction Company being at less than arm's-length, the construction profit heretofore found to be $9,659,183 did not become actual legitimate cost to Houston Texas.

(3) The $9,659,183 recorded in the plant accounts of Houston Texas over the cost to the above-named engineering and construction firms is a write-up and together with the related amount of $304,950 of interest during construction should be transferred from Account 101, Gas plant in service, to Account 116, Other gas plant adjustments, on the books of Florida Gas Transmission Company.

(4) It is reasonable and appropriate that the write-ups and other improper charges in the plant account of Florida Gas Transmission Company of $9,659,183 and $304,950 to be transferred to Account 116, Other gas plant adjustments, be disposed of by a charge to earned surplus, except to the extent of any accrued depreciation applicable to the amounts, which depreciation amounts are chargeable to Account 108, Accumulated provisions for depreciation of gas plant in service.

(5) The accruals for income tax purposes by Coastal now reflected on the books of Florida Gas Transmission Company are in violation of the Commission's uniform system of accounts.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) Florida Gas Transmission Company classify the amounts of $9,659,183 and $304,950, included in this plant accounts and referred to in Finding (3) above, in Account No. 116, Other gas plant adjustments, of the Commission's uniform system of accounts prescribed for natural-gas companies.

(B) Florida Gas Transmission Company dispose of the amounts classified in Account 116, Other plant adjustments, referred to in Paragraph (A) above, as set forth in Finding (4) above.

(C) Florida Gas Transmission Company shall eliminate the accruals by Coastal of the amounts accrued for income tax purposes included in its Accounts 236 and 409, above referred to in Finding (5).

(D) Florida Gas Transmission Company submit within 90-days from the date on which this decision becomes final certified copies of accounting entries effecting compliance with the requirements of Paragraphs (A), (B), and (C) above.

Alvin A. Kurtz,
Presiding Examiner

OPINION NO. 432

WISCONSIN MICHIGAN POWER COMPANY, DOCKET NO. E-7026

OPINION AND ORDER DETERMINING A JUST AND REASONABLE RATE AND PRESCRIBING THE FILING OF SUPPLEMENTAL RATE SCHEDULE

(Issued June 9, 1964)

*Syllabus**

1. Subject agreements are not fixed rate contracts, since they plainly contemplate escalation arrangement to maintain parity between large retail users rates and wholesale rates. P. 1449.
2. Contracts as construed by Commission provide for automatic contractual

---

*Initial decision appears on P. 1466.

acceptance of a rate change, subject to filing requirements of Section 205 of Power Act. P. 1449.

3. Commission purpose is not to reject rate increase filings by hyper-technical interpretation of contract provisions which clearly contemplate rate adjustment procedure. P. 1449.
4. Proper practice and the avoidance of undue discrimination under Section 205 requires, except in unusual cases, [as stated in Gulf States] that once a new rate is adopted by a company it be made available and applied uniformly to all customers of the same class at the same time. P. 1450.
5. Section 205 does not prohibit all rate distinctions but only rate discrimination as between customers of same class, and then only undue discrimination – – that not justified by differences in cost of service, operating conditions, or other considerations. PP. 1450, 1451.
6. Section 205(e) makes clear that the utility filing rate increase carries burden of justifying such increase. P. 1451.
7. Company's claim that Municipalities are estopped to pursue discrimination issue is not persuasive in view of Examiner's warning that difference in treatment must be justified – – nor could waiver by Municipalities relieve Commission of its responsibilities under Section 205(b). P. 1451.
8. Commission *rejects* argument that it lacks jurisdiction to determine discrimination as between jurisdictional rates to Municipalities and allegedly non-jurisdictional rates to co-ops, at least until it has decided question of its rate-making jurisdiction over cooperatives. P. 1451.
9. Under Section 205(e), whenever Commission finds a rate to be unduly discriminatory it may determine the just and reasonable rate to be thereafter observed. P. 1452.
10. There are three stages to a reasonable and proper apportionment of costs – – functionalization, classification and allocation. P. 1452.
11. It is entirely appropriate to roll together in power pool all costs associated with supplying service at wholesale, especially where as here, a parent-subsidiary relationship exists furnishing a basis for piercing corporate veil – – however, under instant circumstances, power pool should be limited to costs of wholesale supplier. P. 1453.
12. In regulation of electric rates it has been custom to classify "fixed" costs as demand-related and "variable" costs as energy-related. P. 1453.
13. It is proper in classifying costs to include in energy component certain steam production and hydro costs normally considered fixed. P. 1454.
14. Classification of cost of purchased power on a per-billed basis, resulting in larger classification of costs to energy component than under modified fixed-variable classification, is proper. P. 1454.
15. Allocation factors applicable to energy-related costs are generally determined on basis of annual kwh use. P. 1454.
16. Commission is not prepared to endorse for general application any single method of cost allocation – – peak responsibility was used as point of departure here because it was only method for which data could be obtained. P. 1455.
17. Under non-coincident demand method capacity costs are allocated in accordance with maximum demands of various loads on system – – effect is to assign some costs to all customer groups in accordance with their individual demands regardless of relationship of such demands to system peak. P. 1455.

18. Effect of average-excess demand method is to emphasize extent of use of capacity, resulting in allocation of increasing proportion of capacity costs to a customer as his load factor increases. P. 1455.

19. To be reasonable, cost allocation must recognize relative energy use either in classification of costs, or in allocation of demand costs, or combination of the two. P. 1455.

20. On this record, Commission *finds* reasonable result would be reached if demand costs are allocated to wholesale sales on basis of average of relative use by wholesale customers at times of the 12 monthly system peaks. P. 1455.

21. In utilizing 12-month demands coupled with cost classification adopted, resulting demand allocation factor provides wholesale cost which falls between results that would follow under *Seaboard* principle (low) and those ordinarily obtained from rigid application of fixed-variable, peak responsibility principle (high) — such result fairly allocates costs between wholesale customers and retail customers on Wisconsin Michigan's systems and gives proper recognition to system operations. PP. 1455, 1456.

22. Rates of return should be generally equal to that on investments in other businesses with corresponding risk, must be sufficient to insure financial soundness of utility and adequate to maintain credit and enable raising of money. P. 1456.

23. A determination which does not represent a judgment based on rate of return evidence in case, but on contrary assumes correctness of Company's rates as filed, cannot be accepted. PP. 1456, 1457.

24. Where affiliation is present, in applying recognized criteria for proper rate of return, need for parent rather than subsidiary should be given primary consideration since parent obtains capital from open market. P. 1456.

25. 6 percent overall rate of return, providing 9.3 percent return on equity, found reasonable. P. 1456.

26. In light of 1964 Revenue Act amendments, Commission's alternatives regarding investment tax credit for public utilities eligible for 3 percent credit are limited to accepting treatment chosen by company, or requiring annual flow-through of benefits of tax credit to rate-payers to extent only of fraction of credit proportionate to average useful life of property. P. 1457.

27. Commission *approves* flow-through of 48 percent of investment tax credit and normalization of remaining 52 percent. P. 1457.

28. Commission *rejects* contention that it set rates of regulated utility as if it voluntarily used liberalized depreciation (as well as guideline service lives), even though, in fact, utility chose to employ straight-line depreciation as has Wisconsin Michigan. P. 1457.

29. Tax laws give management option to take-or not take-liberalized depreciation; on this record Commission does not believe it should in effect deprive Company of such option. P. 1458.

30. In proceeding under Section 205 of the Federal Power Act, Commission determines just and reasonable rate; *prescribes* filing of supplemental rate schedule; and *orders* refunds.

Commissioner Black *concurring*.

John G. Quale and *Van B. Wake* for Wisconsin Michigan Power Company.

C. Emerson Duncan, II and *Jerome C. Muys* for the Cities of Clintonville, Florence, Kaukauna, New London, Oconto Falls, and Shawano, Wisconsin.

Drexel D. Journey and *Watt N. Martin* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

SWIDLER, *Chairman:*

This is a proceeding under section 205 of the Federal Power Act.[1] The case originated with the filing of wholesale rate increases on January 19, 1962, by Wisconsin Michigan Power Company (hereafter "Company" or "Wis-Mich"), to become effective March 30, 1962. On March 29, we suspended the increased rates for five months, until August 30, 1962, and ordered a hearing concerning their lawfulness, acting in the exercise of our authority under section 205(e). After extensive but unsuccessful efforts for a negotiated settlement between the Company and its affected customers, hearings were held before Presiding Examiner Ellis for a total of 16 days concluding June 11, 1963. The Examiner's decision was issued January 7, 1964. Oral argument before the Commission, on exceptions to the Examiner's decision, was held on March 24, 1964.

Wis-Mich sells electric energy at wholesale and at retail in about a dozen counties of northeast Wisconsin in two widely separated divisions joined by a 138-kv transmission line. It also serves a small section of northern Michigan, including two distributors affected by this increase. The Company's wholesale business accounted for approximately 8.2 percent of total system revenues in the test year 1961. Wis-Mich derives about one-third of its power supply from its own generation, largely hydroelectric, and purchases most of the remainder from its parent, Wisconsin Electric Power Company ("Wis-Elec"). The wholesale service involved in this case was held to be jurisdictional more than ten years ago, *Wisconsin Michigan Power Company* v. *Federal Power Commission*, 197 F. 2d 472 (CA 7, 1952), cert. den. 345 U.S. 935 (1953).

Wis-Mich has 12 wholesale customers—7 cities, 2 private companies, 2 small co-ops serving rural areas, and one larger co-op with a mixed rural-suburban clientele. The rate increase applies only to the 7 municipal and 2 private distributors, and six of the municipalities—Clintonville, Florence, Kaukauna, New London, Oconto Falls and Shawano—("Cities") intervened and actively opposed the increase. The other affected distributors have not registered objections. The larger co-op, Oconto Falls Electric Cooperative ("Oconto Co-op"), was served at the same rate as Intervenors until the rate increase which is the subject of this proceeding was filed.

Annual revenues of Wis-Mich would increase by 14.7 per-cent or $233,000 under the proposed rates, but the increased cost to the individual cities would range from 3.7 percent to 31 percent.

The Presiding Examiner rejected the rate increase on the sole ground that it unjustly discriminates against the municipal distributors in favor of the Oconto Co-op. The other two co-ops were not shown to be comparable to the municipal distributors, and thus no finding of unjustifiable discrimination was made as to them. After the Examiner's decision and because of the grounds of the decision, the Oconto Co-op moved to intervene and to reopen the proceeding for further evidence on the issue of discrimination. The Commission denied the Oconto petition without prejudice to the filing of a petition for leave to file an *amicus* brief by Oconto, but Oconto did not avail itself of this opportunity.

The Issue of Contractual Authority

At the outset we must consider the question of contractual authorization for the increased rates filed by Wis-Mich, for unless the company prevails on this issue the rate increase filing must be rejected.

With minor variations the wholesale contracts between Wis-Mich and the Intervenors provide that the distributors agree to pay for power and energy at the rates set forth in the Company's large-user retail rate schedule (Rate VII)on file with the Wisconsin PSC, and the distributor agrees automatically to accept any change in the rate approved by the Wisconsin Commission.[2] The Examiner interpreted the contracts to mean that Wis-Mich agreed to serve Cities at the rates for large retail users, subject to change with FPC approval as the large-user rates are changed from time to time with State approval. On this basis he concluded that the contracts authorized the filing of the proposed wholesale rate increases since State-approved retail rate increases went into effect in 1961.

---

[1] See Appendix C for pertinent provisions of the Federal Power Act.

Two of the Cities' contracts (Clintonville and Oconto Falls) were cancelled as of May 1 and December 6, 1962, respectively, and these distributors are now receiving service without contracts. This does not affect the question of contractual authorization, however, since these contracts were operative on January 19, 1962, when Wis-Mich filed its rate increases with this Commission.

Staff argues that the contract terms do not provide for a change in rates and that the filing should be rejected under the *Mobile-Sierra* doctrine.[3] The Cities take the position that the savings clauses are invalid and therefore cannot supply the necessary contractual support for a unilateral rate increase.

We are in accord with the Examiner's view that these agreements are not fixed rate contracts, since they plainly contemplate an escalation arrangement to maintain parity between the rates of the retail users and the wholesale rates. Moreover we agree with the Examiner that the triggering event for the increase is not an invalid or prohibited State commission regulation of interstate wholesale rates but rather a validly approved rate for retail service. The contracts as we construe them thus provide for an automatic contractual acceptance of a rate change, subject to the requirements of filing under section 205 with FPC.

In interpreting these contracts it should be remembered that many changes have intervened in the law and in the power economy since the execution of these contracts in the 1930's. It is not our purpose to reject rate increase filings by hyper-technical interpretation of contract provisions which clearly contemplated a procedure for rate adjustments. On the contrary, the effective exercise of the rate-making powers of this Commission will insure that contractual provisions for rate adjustments can be utilized by the seller in a manner fair to the purchaser.

The Issue of Discrimination

Next we turn to the issue of discrimination which is the fulcrum of the Examiner's recommended order.

---

[2] The New London contract provisions, for example, read as follows:

Section 1: The Power Company shall deliver, and the Distributor shall receive, electric energy from the Power Company's transmission system, and the Distributor shall pay to the Power Company, on or before the 20th of each month for electric energy received during the preceding monthly billing period, an amount computed on the rates and charges set forth in Wisconsin Michigan Power Company's Large Users' Power Service Rate VII now on file and approved by the Wisconsin Public Service Commission, to-wit: (Exh. No. C-12, p.4).

Section 2: It is hereby agreed and understood that should there be any revision and/or change in said Rate VII approved by the Wisconsin Public Service Commission, at any time during the life of this contract, then the Distributor shall under this contract automatically receive and accept such revised rates (Ibid, p. 6).

[3] *United Gas Pipe Line* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956); *Federal Power Commission* v. *Sierra Pacific Power Co.*, 350 U.S. 348 (1956). In *Sierra* it was held that the Federal Power Act does not by its terms authorize a public utility regulated under Title II of the Act to impose unilateral contract changes on its wholesale customers without their consent simply by filing a new rate schedule with the Commission. *Mobile* reached an analogous result under parallel provisions of the Natural Gas Act.

The Examiner rejected the proposed rate increases to the municipalities on the sole ground that they created an unjustifiable discrimination contrary to section 205(b) of the Federal Power Act as between the affected Cities and the one wholesale customer not covered by the increase, the Oconto Co-op. For that reason he directed that further billings be made at the old contract rates until a new non-discriminatory rate is established, and that collections in excess of the old rates be refunded without interest.

Oconto's rate from the date it was first filed in 1947 has been the same as the rate for Wis-Mich's municipal wholesale customers—that is, until the rate differential created in 1962 by this filing. The precise legal issue to be resolved is whether the effect of the rate increase for the municipalities and not the cooperative was to "make or grant any undue preference or advantage" or to "subject any person to any undue prejudice or disadvantage," within the meaning of section 205(b).[4]

The discrimination issue was included in the Commission's notice of hearing, having been first raised by Cities when they responded to the rate filing but the Oconto Co-op did not seek to intervene at this stage of the case. On the opening day of the hearing Company counsel announced that its board of directors had adopted a resolution authorizing a proceeding to establish new and reasonable rates for the co-op customers to be commenced as soon as this case is completed. The following day in a colloquy among counsel, counsel for Cities stated that he thought this would satisfy his clients and, "we do not intend to raise it further in view of this development." Staff counsel stated that the issue was primarily of concern to Cities, although only the Commission could finally decide it. A week later when the case was apparently well on its way to being tried without further reference to this issue, Examiner Ellis warned counsel that a finding of undue discrimination would be entered unless the Company proved either lack of discrimination or justification. Wis-Mich then produced one witness, its commercial manager, who testified concerning the Company's co-op loads. His testimony showed that the loads of the two smaller co-ops are submarginal, scattered and seasonal, and that these co-ops have been served under a "load factor rate," a different class of rate than the municipal customers, although no one disputes that the rates to the Cities and Oconto were on the same level before the instant rate increase was filed. However, the testimony indicated that the Oconto Co-op has been a faster growing co-op more comparable to the municipal customers, with higher 1961 sales than 5 of the Company's wholesale customers.

The anti-discrimination provisions of the Power Act have been applied only twice in the history of the Commission. In *Gulf States Utilities Company*[5] the basic test to be used in construing § 205(b) was stated as follows:

> Proper practice and the avoidance of undue discrimination requires, except in unusual cases, that once a new rate is adopted by a company it be made available and applied uniformly to all customers of the same class at the same time.[6]

We elaborated upon this test in *Otter Tail Power Company*[7] by indicating that the proper scope of inquiry under § 205(b) would take into account whether "the same kind of service under substantially similar conditions is rendered" to each of the wholesale customers, and whether differences in rates might be justified by "substantial lawful differences in cost of service or operating conditions." § 205(b) thus does not prohibit all rate distinctions but only discrimination as between customers of the same class, and then only undue discrimination—that which is not justified by differences in cost of service, operating conditions or other such considerations.

---

[4] See Appendix C for pertinent provisions of the Federal Power Act.

[5] 1 FPC 522 (1938).

[6] *Id.* at p. 524.

[7] 2 FPC 134 (1940).

These early opinions were rendered more than two decades ago before REA co-ops became major purchasers of power at wholesale. They would therefore, not be dispositive of the contention that the cooperatives constitute a separate class of customers for rate-making purposes or other related contentions on which a full record is being made in another proceeding pending before an examiner of this Commission.[8] Moreover Oconto Co-op chose not to intervene in this proceeding until the record had been closed and the Examiner had rendered his initial decision. While in these circumstances the Commission denied that Oconto petition to reopen the record, the fact remains that the record contains little evidence to aid this Commission in reaching a decision on the issue whether REA cooperatives constitute a separate class of customers, which is of such broad importance. We make clear, therefore, that our decision here is based on the narrow record in this proceeding and is not to be treated as a precedent on the broad question of the proper rate level for sales to cooperatives.

The determinative considerations in this case may be simply stated. For a 15-year period prior to the filing of the rate increase in this proceeding, the Company sold power to municipalities and Oconto on the same rate schedule. The rate increase which is the subject of this proceeding altered the status quo by increasing the rates to the municipalities while not increasing the rates to the co-ops. Section 205(e) makes clear that the utility filing a rate increase carries the burden of justifying it. The Commission's initial order in this proceeding raised the discrimination issue and, while Intervenors may have suggested that they were not pressing the issue, the Examiner made it abundantly clear that the issue was still in the case. Company recognized this fact and offered a witness but his testimony does not afford a basis for justifying a differential between the municipal rates and the rates for the cooperative, and Company in its briefs does not rely on it to justify the discrimination. Company's claim that Cities are estopped to pursue the discrimination issue is not persuasive in view of the Examiner's warning to the Company that they must justify the difference in treatment. Moreover a waiver by the Cities could not in any event relieve the Commission of its responsibilities under section 205(b). *Transcontinental Gas Pipe Line Corp.*, 28 FPC 979 (1962). We conclude that the Company has failed to carry its burden of justifying the rate increase for the Cities alone.

The Company also seeks to defend the existing difference in rates by a challenge to our jurisdiction, which is plainly without merit. In substance Wis-Mich argues that the Commission lacks jurisdiction to determine discrimination as between jurisdictional rates to the Cities and allegedly non-jurisdictional rates to the co-ops, at least until the Commission has decided in a pending case whether electric cooperatives are subject to its rate-making jurisdiction.[9] The short answer is that we regulate sales of power at wholesale in interstate commerce and not purchases. It is Wis-Mich that we are here regulating and not the cooperative.

We therefore conclude that the Company has not justified a higher rate for the municipalities than for its cooperative customers. As previously noted, we recognize that the cooperative did not participate in this proceeding and we therefore make no findings in this case which would in any way prejudice Oconto's rights.

Cost-of-Service Issues

Our finding that the increased rates that are the subject of this proceeding are discriminatory does not end our adjudicatory responsibilities. Under the terms of section 205(e), whenever we find a rate to be unduly discriminatory we may determine the just and reasonable rate to be thereafter observed.[20]

In this case we cannot prescribe the exact level of rates for all of Wis-Mich's customers because Oconto is not before us and we have reserved judgment on what, if any, differential in the rates to the cooperatives may be justified. Wis-Mich may choose to eliminate the discrimination by maintaining the rates previously in effect which were at the same level for both its municipal and cooperative customers. However, a full hearing has been held on all of the cost of service issues which are necessary to determine just and reasonable rates for the municipal wholesale customers. If we ended our decision at this point, the time and money invested by all of the parties and the Commission staff in trying these issues would go for nought and, more important, Wis-Mich would have no guidance as to the proper maximum level of just and reasonable rates for its municipal customers. We shall, therefore, proceed to consider the cost of service issues in order to avoid any possibility of an expensive and lengthy retrial of the many issues that are now before us.

It is hardly surprising that in this, the first electric ratemaking proceeding before the Commission involving sales to municipal and cooperative customers in over a decade, we find substantial differences among the parties at almost every stage of the cost analysis, presenting a broad range of questions for consideration by the Commission.

The basic cost of service issues are as follows:

1. The appropriate power pool—whether Wis-Mich alone or in combination with Wis-Elec.
2. The proper classification of costs between demand and energy, and the proper allocation of costs between wholesale service and retail customers.
3. Rate of return.
4. Certain tax-related matters including liberalized depreciation.
5. Rate design.

In this case, as in many rate cases that come before us, one of the important issues is a reasonable and proper apportionment of costs. There are three stages to this process, functionalization, classification, and allocation.

Functionalization is the grouping of plant and related costs according to functions they perform as, *e.g.*, generation, transmission and distribution. In wholesale electric rate cases this step includes, also, the grouping of costs related to the "power pool", *i.e.*, the generation and transmission facilities that supply the wholesale service. Usually the Company's accounting records, which are required to be consistent with the uniform system of accounts, provide a considerable part of the information necessary for this procedure. Next is the classification of these power pool costs to either demand or energy. The last step is the allocation of costs which is the division of the classified costs between the wholesale customers and the Company's other customer groups.

---

[20] See Appendix C for § 205(e) and § 206(a) of the Federal Power Act.

Power Pool.—A first issue to be resolved in this case is thus to delimit the costs to be included in the power pool, which will then serve as the basic costing unit for calculating the costs of service to the wholesale customers.

Here there is a choice between including in the power pool only the separate costs of Wis-Mich, or rolling together the costs attributable to all of the facilities that serve the wholesale customers, whether owned by Wis-Mich or by its parent, Wis-Elec. Intervenors supported the use of the rolled-together basis, pointing to the material dependence of the Wis-Mich system upon power generated by Wis-Elec steam plants, to the substantial operating integration of the two companies and to their interlocking directorates and officers. The Company and Staff position, adopted by the Examiner, would observe the separate corporate entities and count in the power pool only the costs of Wis-Mich for serving the wholesale customers.

We agree that it is entirely appropriate to roll together in the power pool all costs associated with supplying service at wholesale, especially where, as here, there exists a parent-subsidiary relationship which furnishes an acknowledged basis for piercing the corporate veil. However, piercing the corporate veil is not an end in itself and the facts of this case show that the wholesale customers stand to gain nothing by the use of a rolled-in base. The physical facts certainly do not compel a rolled-in treatment. The respective service areas of the parent and subsidiary are completely separate, and while the two systems are interconnected, they are not thoroughly integrated. The intercompany energy transactions are metered and recorded, and the computation of the cost of service to wholesale customers on a separate company basis poses no unusual technical problems. Under the circumstances we agree with the Examiner that the power pool should be limited to the costs of the wholesale supplier, Wis-Mich.

Cost Classification and Cost Allocation.—Next we turn to the subject of classification of costs between demand and energy. In the regulation of electric rates it has been the custom to classify "fixed" costs as demand-related and "variable" costs as energy-related. Fixed costs have been generally defined as costs that do not vary with output, but are related to system capacity and thus to the plant investment; variable costs are those that vary with output and are incurred as utility service is being rendered. The costs to be assigned to each category are fairly well defined but as this case reveals are still a source of dispute.

All three of the participating parties have classified certain costs which they assume to be "fixed costs" to the energy-related component. Although they agree on the principle that a portion of such costs should be classified to energy, they differ as to the amount.

The Staff and the Company propose a modified fixed-variable classification of costs between demand and energy, *i.e.*, they assign certain amounts to energy which have traditionally been considered to be fixed. In classifying the pool costs, the Staff assigned to energy all production expenses, exclusive of the demand portion of purchased power costs. It also assigned 30 percent of all hydro costs (except hydro operation and maintenance) to energy, because about 30 percent of the effective capacity of the Company's hydro plants is available to generate energy during periods of flow in excess of adverse flow conditions. Other costs, including the demand portion of the purchased power costs, were classified to demand. The Staff's classification results in assignment to energy of about 20 percent of costs which it considers as "fixed." The Company's classification, generally, does not differ from the Staff's."

The Cities propose to import into the electric power field the so-called ***Atlantic Seaboard*** method of classification of costs which has been the source of much controversy and little satisfaction in the natural gas field. The method classifies 50 percent of all fixed costs to demand and 50 percent to energy. Stripped of its provocative title, Intervenors' proposal simply allocates the fixed costs in proportion to the average of (a) relative peak period use and (b) relative average use during the year. (Average use is annual kwh divided by 8,760, the number of hours in a year.) If the *Seaboard* principle is stated in this form one can more readily understand the claims made for it by the Intervenors, that it ". . . gives equal weight to the dual function of the generators, dams and transmission lines which are to serve the customers all year around . . . as well as to meet the collective peak requirements at points of high demand." (I. Br., p. 54.)

In classifying costs, we find the Staff correctly included in the energy component certain of the Company's steam production costs and hydro costs which are normally considered fixed. Staff also properly classified the cost of purchased power on a per-billed basis, which results in a larger classification of costs to the energy component than under the modified fixed-variable classification employed by Staff and Company. (The revenues assigned to energy on a per-billed basis were $5,238,552, as compared to $3,559,598 under Staff's cost-of-service. Exhibit S–17.) Such classification would allocate to the high load factor customer who uses the system more intensively a somewhat greater share of fixed costs for the same demand than the low load factor customer, although not as great a portion as Intervenors suggest.

Next is the question of allocation. The allocation factors applicable to the energy-related costs are generally determined on the basis of annual kwh use and are rarely in issue. The appropriate allocation factors applicable to demand costs and the portion, if any, of demand-related costs to be assigned to the energy component are very much in dispute.

Many methods have been suggested for allocation of demand costs. Most of these were designed for the purpose of allocating costs among the various groups of retail customers served by an electric company rather than for the allocation of costs between wholesale and retail sales. Some of the methods were also intended to provide an incentive to shift loads from a company's peak periods to off-peak periods, a purpose that is sometimes practicable where ultimate consumers are concerned, but is usually much less feasible for wholesale customers.

Both Company and Staff use as a point of departure the so-called peak responsibility method of allocation which as its name implies allocates the demands costs strictly on the basis of peak use. The Staff and the Company, however, depart from the strict application of the peak responsibility method by using an average of four separate peaks occurring in four different months in the winter season to develop the relative use factors for allocation of costs classified as demand costs. The demand allocation ratio of 15.69 percent so determined is approximately halfway between the average of the four peak months (15.92 percent) and the average of all 12 months (15.43 percent).

Cities propose the use of a modified peak responsibility method of demand cost allocation which differs from that proposed by the Company and the Staff in that it uses an average of five coincidental peaks occurring on two successive days. The effect of this method, all other things being equal, would be to allocate to high load factor customers a greater portion of fixed costs than that which results from the Company's and Staff's proposals.

It appears, therefore, that all three parties agree that a modification of both the strict fixed-variable cost classification and a modification of the traditional peak responsibility method are necessary to obtain a reasonable result. The issue in the case is the extent to which so-called fixed costs should be classified in the energy component and the proper manner of modification of the traditional peak responsibility method.

The Commission is not prepared to endorse for general application any single method of cost allocation. Peak responsibility was used as a point of departure in this case, as it is used in many others, because it was the only method for which data could be obtained. There are other well-recognized methods of cost allocation which may be appropriate in other cases, such as the non-coincident demand method, the average and excess demand method, and others which take into account the time incidence of customers' peak demands, the duration of such demands, and relation of such demands to the time and magnitude of the system maximum demand. However, the application of these allocation methods requires demand metering equipment that was not available here.

Under the non-coincident demand method capacity costs are allocated in accordance with the maximum demands of the various loads on the system. That is, cost is allocated to a given load in the ratio of its maximum demand to the sum of the maximum demands of all loads at the appropriate costing level. The effect is to assign some costs to all customer groups in accordance with their individual demands regardless of the relationship of such demands to the system peak.

Under the average-excess demand method capacity costs (C) are divided into two parts in accordance with the system load factor (L). The portion equal to LC is allocated to customer classes on an energy use or average demand basis, and the balance (1–L)C is allocated on the basis of excess demands (the maximum demand of a load less its average demand). The effect of the average-excess method is to emphasize the extent of use of capacity, resulting in allocation of an increasing proportion of capacity costs to a customer as his load factor increases.

In our opinion a cost allocation to be reasonable must recognize the relative energy use either in the classification of costs, or in the allocation of the demand costs, or in a combination of the two. All parties have recognized this principle but have differed in the effect given to it in their presentation.

We find that on this record a reasonable result would be reached if the demand costs are allocated to the wholesale sales on the basis of the average of relative use by the wholesale customers at the time of the 12 monthly system peaks. This method recognizes the fact that electric generation and transmission facilities are installed for the purpose of meeting the demands season to season, month to month and day to day and not just the maximum load on the system at any one given time or any one segment of the year. The monthly peaks have an important effect on total capacity requirements, inasmuch as they determine the extent to which generating equipment may be taken out of service for maintenance and repair. Also, this method appears to be especially applicable in the present case in view of the fact that the monthly peak loads are not substantially different from one another. The minimum monthly peak load of the four months used by the Staff and the Company was approximately 95 percent of the annual peaks. The minimum monthly system peak load during the test year of 191,828-kw uses more than 89 percent of the annual peak. It is worth noting that both the four-month average used by the Staff and Company and the 12-month average used herein are weighted averages so that the months of higher peaks are given greater weight than the months of lesser peaks.

In utilizing the 12-month demands so derived coupled with the Staff cost classification which we have adopted, the resulting demand allocation factor provides a wholesale cost which falls between the results that would follow under the *Seaboard* principle (low) and those ordinarily obtained from a rigid application of the fixed-variable, peak responsibility principle (high). We believe that such a result fairly allocates costs between the wholesale customers and the retail customers on Wis-Mich's systems and gives proper recognition to system operations.

Rate of Return.—As has often been noted, rate of return is one of the most difficult and at the same time most basic of regulatory issues. As indicated in the *Bluefield* and *Hope* cases,[11] rates of return should be generally equal to that on investments in other businesses with corresponding risk, must be sufficient to insure the financial soundness of the utility and adequate to maintain credit and enable the raising of money.

Extensive rate of return studies were presented in evidence by Staff and Company witnesses. The Intervenors offered no direct evidence on the issue of fair return but argued for a return of 5.55 percent citing the Commission's decision in *South Carolina Generating Company*, 16 FPC 52, which is the Commission's most recent decision in an electric rate case.

The Examiner, although approving the general approach of the Staff presentation, concluded by accepting the Company's "true claim" for the rate of return actually produced by the proposed rate increase of between 6.1 percent and 6.2 percent, which was approximately the return prescribed by the Wisconsin Commission in the Company's retail rate case. The Examiner's determination does not represent a judgment based on the rate of return evidence in this case but on the contrary assumes the correctness of the Company's rates as filed and therefore cannot be accepted. Such an assumption is comparable to the Examiner's decision in *Natural Gas Pipeline Company of America*, 14 FPC 212, where we held that the Examiner was not justified in approving proposed rates resulting in a 6.1 percent return as not constituting a "material departure" from the fair and reasonable rate of 6 percent.

Wis-Mich is a subsidiary of Wis-Elec and we recognize that in applying the recognized criteria for the proper rate of return the needs of the parent rather than the subsidiary should be given primary consideration because it is the parent which obtains the capital from the open market. However, as indicated by the evidence presented by the Staff, the capital structure and debt service cost of the parent and subsidiary in this case are reasonably comparable and we shall therefore consider Wis-Mich's rate of return independently.

The Company argues for a 6.5 percent over-all rate of return on the basis of its evidence and its test year capitalization of 40.9 percent common equity, 7.7 percent preferred stock and 51.4 debt. A 6.5 percent over-all return would yield 10.5 percent on common equity which the Company claims is necessary to attract new capital at reasonable cost. The Staff witness testified that a rate of return range of 5.75 percent to 6.25 percent would be reasonable for Wis-Mich and recommended 6 percent as the fair rate of return. A return in the range suggested by Staff would yield from 8.675 percent to 9.897 percent on common equity. The Intervenors in arguing for a 5.55 percent rate of return argued that this would produce a 8.27 percent return on equity and that this would be reasonable.

We have carefully considered the arguments of all the parties and we conclude that a return of 6 percent is fair and reasonable and meets the numerous tests set forth in the various cases cited by the parties.

Both the Staff and Company witnesses gave consideration to compilations of rates of earnings on book equity of selected electric utilities. The evidence on these utilities does not indicate whether the listed returns were in line with the proper rate determinations for the various companies as set by regulatory agencies. On the contrary, one group of 27 companies considered by the Company witness included several companies located in states that are regulated on a fair value basis and 9 companies located in states in which there is no regulation of electric utilities at all. The Company exhibit does not indicate the equity ratios of these 27 companies which adds to the difficulties of evaluating the comparability of these return figures.

---

[11] *Bluefield Waterworks and Improvement Co. v. P.S.C.*, 262 U.S. 679; *F.P.C. v. Hope Natural Gas Co.*, 320 U.S. 591.

The contention of the Intervenors that a 5.55 percent return is sufficient was not supported by the introduction of any evidence into the record. It is based solely on the Commission's *South Carolina Generating Company* decision where the facts indicated the circumstances were entirely different. There a 5.55 percent over-all rate of return was found reasonable for a high debt company that owned a single generating plant. South Carolina's common equity ratio of 27.8 percent was unusually low and the 5.55 percent over-all return yielded 10.5 percent on common equity in contrast to the 8.27 percent it would yield here.

The Staff approach which took into account the necessity for consideration of a variety of factors and the inevitable exercise of judgment which must balance the various competing interests at stake is more in accord with the guidelines for determining rate of return previously laid down by this Commission.

The 25 electric utilities selected by the Staff for comparison purposes indicate an average earnings price ratio for these firms of 4.7 percent which compares favorably to the earnings price ratio of 5.1 percent for Wis-Mich. The return on equity of about 9.3 percent which would result from a 6 percent over-all return is in line with the past equity earnings of the parent and such earnings have apparently proved to be no detriment to the ability of the Company to carry out its public utility obligations or to raise funds when needed.

Tax Matters.—Another area of contention involves tax allowances—specifically, the handling of the investment tax credit and of the depreciation tax options in computing the Company's cost of service.

In light of the 1964 Revenue Act amendments the Commission's alternatives with regard to the investment tax credit for public utilities eligible for the 3 percent credit are limited to accepting the treatment chosen by the Company, or requiring annual flow-through of benefits of the tax credit to the ratepayers to the extent only of a fraction of the credit proportionate to the average useful life of the property.[12] The President of Wis-Mich testified that the Company considers a flow through of 48 percent of the credit and normalization of the remaining 52 percent to be the best treatment of the matter. [13] We therefore approve this method of treatment for fixing Wis-Mich's wholesale rates.

We have heretofore taken the position that, if a utility chooses to utilize a liberalized depreciation option permitted by the tax laws, the benefits thereof must be flowed through to ratepayers within the operating year.[14] Intervenors would have us go one step further and set the rates of a regulated utility as if it voluntarily used liberalized depreciation (as well as guideline service lives), even though the utility in fact chose to employ straight-line depreciation, as Wis-Mich has done. Intervenors' position proceeds from the proposition that public utilities are obligated to operate with all reasonable economies, including the lowest reasonable tax burden, and to pass these economies along to the ratepayer.

While there can be no dispute with the principle that utilities should operate with maximum efficiency, we do not believe this rule leads to the conclusion urged by the Intervenors. On this record it is clear that this Company has never used liberalized depreciation and has chosen to apply straight-line depreciation to its property as a matter of business judgment. Its officers firmly believe this to be the wisest course in the long range interests of the Company and its customers. The case that has been made for requiring the Company to use (or for assuming it has used) guideline service lives is not persuasive, either on the facts of this case or as a general principle, and we could not accept the Intervenors' position in this regard. As to liberalized depreciation, the tax laws give management the option not to take liberalized depreciation and we do not believe that on this record we should in effect deprive the Company of its option under the tax law.

---

[12] Pub. L. 88-272, 78 Stat. 35.

[13] Ex. C-37, p. 27; Tr. pp. 295-298.

[14] *Alabama-Tennessee Natural Gas Company,* FPC Docket No. G-5471, Opinion No. 417, issued February 3, 1964, 31 FPC 208.

Reconciliation of Other Disputed Cost of Service Questions.—Aside from the matters thus far reviewed, there remain only three items in the cost of service computation on which there is disagreement. These items involving at most a total of about $59,000, are as follows: $21,000 for annual costs relating to Appleton Steam Plant,[25] a "cold standby" plant that Wis-Mich would include in its cost of service but Staff would allocate to the parent, Wis-Elec; $22,477 for disallowance of certain substation and transmission properties which Staff contends serve retail outlets only; and $15,192 representing some minor variations in classification of production costs to demand and energy.

We agree with the Staff that the Appleton Steam Plant costs should be excluded from the power pool, since this plant, which is nominally owned by Wis-Mich, has been maintained on standby and operated exclusively to meet emergency needs of Wis-Elec system at considerable additional cost to Wis-Mich. The Examiner apparently felt that approximately half of this sum should be included in the Wis-Mich power pool because the Appleton Plant might be of some potential standby value to Wis-Mich, but we do not find this reasoning persuasive.

We also agree, as does the Examiner, that the disputed substation and transmission items should not be included in the wholesale cost of service, since they properly relate exclusively to retail service. We concur in the Staff's judgment on the disputed questions of classification.

Applying the findings and conclusions we have made (pp. 1452–1458 above) on the cost of service issues in this case, the total revenues produced by this cost of service for the test year would be $1,766,778, which amounts to a reduction of approximately $50,000 from the increased rates proposed by the Company. There is set forth below a comparison of the amounts of revenues under the proposed and the old rates with the allocated costs suggested by the parties, and the costs resulting from classification and allocation we have found reasonable under the circumstances of this case:

Revenues (normal hydro):[1]	
Proposed rates	$1, 815, 760
Old rates	1, 582, 293
Increase	233, 467
Allocated costs:	
Company	[2] 1, 889, 732
Staff	1, 782, 072
Cities	[3] 1, 339, 050
Commission	1, 766, 778

[1] Exhibit No. C-3A, Schedule 22.

[2] At 6.5 percent rate of return, Exh. C–3A, Schedule 24A (revision of 5/14/63). At 6 percent rate of return the amount is $1,848,460.

[3] Derived from combined system costs, at 5.55 percent rate of return, reflecting liberalized depreciation and exclusive of certain facilities includable in the power pool.

---

[25] Tr., pp. 1588–93. Staff Brief, Sept. 20, 1963, p. 34.

The derivation of the Commission's allocated cost of service for the test year is shown in Appendix A.

Rate Design.—The rate schedule at issue here is denominated as "Rate for Primary Service to Electric Public Utilities." It is purported to contain the rates and related terms identical to those approved by the Wisconsin and Michigan Commissions for large retail users. The Company seeks to justify the use of this new rate schedule which makes numerous changes in the rate design for sales to the nine wholesale customers without any support other than the provisions of its contracts. This will not suffice.

The burden of supporting the provisions of any change in a rate schedule is upon the Company. Since the Company failed to carry out its obligation on the record, we believe that under the circumstances of this case in order to obviate further delays in establishing reasonable rates for Wis-Mich wholesale customers, the public interest will be served if we determine and set forth an appropriate rate schedule based upon the cost level herein determined.

While the total increase proposed by the Company amounts to about 14.7 percent, the increases to individual customers vary from about 4 percent to about 31 percent. Through changes in the use blocks, differing increases in charges in the various use blocks, and a change in credit for delivery voltage, the highest percentage increases are generally proposed for the smaller of the nine customers. Also involved in the difference in percentage of increases is the fact that two customers, Crystal Falls and Upper Peninsula Power Company, had been served under demand and energy rates which resulted in higher charges than those obtainable under the rate applicable to the other seven customers.

Our examination of the old and proposed rates leads to the conclusion that percentage increases to individual customers should be as nearly identical as possible. The record does not show any reasons justifying the discriminatorily higher percentage increases proposed for the smaller customers. We believe that unless the Company makes such a showing, the general effect of proposed higher rates should be a relatively uniform distribution of the requested increase. This requires the establishment of new use blocks and the unit rates applicable to each block, as well as determination of the proper provision for high voltage discount.

Eight of the nine customers whose rates are proposed to be increased have been receiving a discount of 7 percent of the gross monthly bills for taking service at Company's "primary" or "transmission" voltage. These service voltages ranged from 2.3-kv to 34.5-kv. Crystal Falls, the customer which did not receive such a discount, obtained service at 12.47-kv.

The over-all voltage credit under the new rate would amount to $42,327, compared with the credit of $116,773 under the prior rates. It would apply to 6 of the 9 wholesale customers, 10 cents per kw for those with voltages of 12-kv to 25-kv and 15 cents per kw for voltages in excess of 25-kv.

The 7 percent voltage credit provision in the old rate schedules apparently was not based on any cost considerations—witness its application to service at as low as 2.3-kv. While the levels of proposed credits appear to conform to costs, we think that voltage discounts should apply for service at power pool voltages, which in the case before us are 34.5-kv and higher. Otherwise credits will be given to customers receiving service at lower than pool voltage, even though the Company incurs transformation costs to render such service. This determination will limit the applicability of the voltage discount provision to four customers, reducing the amount of the credit as proposed by the Company by only $1,336 from $42,327 to $40,491. This difference, of course would not represent a windfall to the Company, being distributed to all customers through the level of rates herein determined.

The Cities contend that the costs utilized by them for the rolled-in system should be adjusted to reflect the downward trend in fuel costs. While for reasons previously stated, we are not piercing the corporate veil in this case, we nevertheless agree with the Cities that the reduced cost of fuel on the Wis-Elec system should be recognized insofar as it is reflected in the bills paid by Wis-Mich to the former for purchased firm energy.

The rate schedule which Wis-Elec uses for billing Wis-Mich (Wisconsin Electric Power Company, FPC Electric Rate Schedule No. 3, as supplemented by Supplement No. 3) contains the following provisions with respect to the charge for firm energy:

> The energy charge for firm power shall be 0.65 cent per kilowatt-hour, based upon a cost of 30 cents per million B.t.u. for coal delivered in the Electric Company's plant bunkers. Whenever said cost of coal is greater or less than 30 cents per million B.t.u., the energy charge shall correspondingly be increased or decreased 0.015 cent per kilowatt-hour for each 1 cent increase or decrease in the cost to the Electric Company of one million B.t.u.

The annual reports (F.P.C. Form No. 1) filed by Wis-Mich with the Commission show that in 1961, the test year used here, it purchased 642,832,000-kwh of firm energy from Wis-Elec. The payment for this energy included a charge of $155,939 for fuel cost adjustment, or 0.02426 cent per kwh; and in 1963 it was 0.00506 cent. 12.56 percent of the adjustment, or $19,586 is applicable to wholesale business and is included in the $1,766,778 cost of service we have determined for the nine wholesale sales in the test year. Had the 1962 unit adjustment been in effect in 1961, the total charge arising from the fuel adjustment clause would have been $130,366 (0.2028 cent times 642,832,000), or $25,573 less than actual. The amount of such a reduction applicable to the sales here in question is $3,212 (12.56 percent of $25,573). Similarly, had the 1963 unit adjustment been in effect in 1961, the total charge under the fuel clause would have been $32,527, or $123,412 less than actual. The amount of such reduction applicable to the sales here in question is $15,501. These figures show a reduction in costs to Wis-Mich which should be reflected in its wholesale rates.

The proposed wholesale rate of Wis-Mich does not contain a provision for billing adjustments to reflect variations in the cost of fuel, although the rate proposed to be superseded contains such a clause. We believe that a clause providing for billing adjustments to reflect changes in the cost of fuel should be included in Wis-Mich's rates. However, since the Company does not purchase any fuel itself, its clause should provide for fuel adjustment charges or credits reflecting the amounts paid under fuel adjustment clauses of its suppliers. An appropriate adjustment clause would be as follows:

> The energy component of this rate shall be adjusted upward or downward to reflect the actual fuel cost adjustments on electricity purchased by the Company, such adjustment to be determined by dividing the sum of fuel adjustments paid by the Company on electric energy purchased by it during the second preceding month by the total kilowatt-hours sold during that month to all customers of the Company.

The schedule of rates hereinafter determined, coupled with this fuel adjustment clause, will insure that Wis-Mich's rates fairly reflect current fuel costs. However, the rate schedules under which Wis-Mich buys its electric energy are not before us and accordingly we do not undertake to pass upon the propriety of fuel adjustment clauses or the level of rates in such rate schedules.

The $1,766,778 wholesale cost of service for the test year which we have found reasonable for the nine sales here in question, and which the Company is entitled to recover through rates, is net after charges under fuel adjustment clause ($19,586), credits for level of service voltage ($40,991) and a one percent credit for prompt payment as proposed by the Company ($17,882). Thus the gross revenue from these rates is $1,806,075.[16]

The following schedule of rates will produce as uniform a rate increase as practicable for the various sizes of loads, load factors and voltage credits here involved:

Demand charge per kilowatt per month:	
First 1,000 kw of billed demand	$1.80
Over 1,000 kw of billed demand	$1.35
Energy charge per kilowatt-hour:	
First 200,000 kwh per month	1.0¢
Next 1,200,000 kwh per month	.9¢
Over 1,400,000 kwh per month	.8¢

The net revenue produced by the rate, applied to the sales in the test year presented in the record, would amount to $1,765,853, which is within $925 of the cost of service to the nine customers, a difference well within tolerable limits of rate design. The complete rate schedule which incorporates the above rate is included herein as Appendix B.[17]

The Company proposed the inclusion of a special minimum charge of $18.00 per kw per year for auxiliary service. Such charge would apply to two customers involved in this proceeding: Kaukauna and Crystal Falls. It is stated that the $18.00 charge is to replace a current $12.00 charge as provided for by the Company's retail rate VII-B. However, neither of the rate schedules on file with us for service, respectively, to Kaukauna and Crystal Falls contains a document designated as rate VII-B. The Company has agreed that the Kaukauna contract does not permit such a change to be filed as to it, but the Crystal Falls contract has been cancelled.

We conclude that the proposed charge is not appropriate in any event since the record contains no justification of the provision for such a charge.

On this record we see no reason for eliminating the common restriction on sales for resale in the proposed supplements.

The proposed supplements are incomplete in that they fail to include the specific text of the "Company's Rules and Regulations." The same is true, incidentally, of the rate schedules on file prior to the submission of the supplements here in question. The Federal Power Act and our Regulations thereunder require that filed rate schedules applicable to services subject to our jurisdiction shall be complete.

Summary and Conclusion

We have found that the increased rates filed by Wis-Mich are unduly discriminatory, and are unjust or unreasonable in the several respects indicated in the "Cost of Service" section of this opinion. As we have already pointed out the record in this case does not contain the data necessary for determining the rate to the Oconto Co-op, and we are not passing on the issue of whether service to Oconto can be separately classified.

We are therefore rejecting the discriminatory filing and permitting the Company to submit new filings for all of its wholesale customers which are just and reasonable in accordance with cost of service principles set forth herein and which are also nondiscriminatory. The new filings may include any difference in treatment for the Oconto Co-op from the rates prescribed for the municipalities that the Company believes it can justify. In accordance with our findings of undue discrimination we are also ordering that past rate collections in excess of the old rates should be refunded with interest at 6 percent.

---

[16] $1,766,778 — $19,586 + $40,991 + $17,882.

[17] Omitted in printing.

The Examiner relieved the Company from any requirement of paying interest because he found the delay not attributable to the Company. We consider this an inadequate basis for omission of interest, even indulging the doubtful assumption that the delays can be faulted to Intervenors and Staff. The excess revenues extracted from Intervenors have been available to Wis-Mich and unavailable to Intervenors. The Company should be required to pay for the value of this use. In view of the question that has been raised concerning the payment of interest, and because no interest rate was established in our initial notice of hearing, we are fixing an interest rate of 6 percent in this case. We intend in future electric rate cases, however, to apply the 7 percent rate which prevails in natural gas rate proceedings.

The Commission further finds:

(1) The proposed increased rates filed by Wisconsin Michigan Power Company on January 19, 1962, and suspended by the Commission until August 30, 1962, are unduly discriminatory and are unlawful within the meaning of Section 205(b) of the Federal Power Act.

(2) The proposed increased rates filed by Wisconsin Michigan Power Company referred to in paragraph (1) above are unjust and unreasonable within the meaning of § 205(a) of the Federal Power Act to the extent they are more burdensome to the wholesale customers than the rates set forth in Appendix B hereof.*

The Commission orders:

(A) The proposed increased rates filed by Wisconsin Michigan, referred to in paragraphs (1) and (2) above, are hereby disallowed. The rates in effect prior to August 30, 1962, shall continue in effect until superseded by an appropriate filing consistent with this opinion.

(B) Within 45 days from the date of issuance of this opinion Wisconsin Michigan shall refund to the wholesale customers listed below the excess of the total amounts charged and collected since August 30, 1962, over and above the amounts which would have been charged for sales to said customers if computed in accordance with Wisconsin Michigan's rate schedules and supplements thereto, applicable up to that date, with interest at the rate of 6 percent per annum from the date of payment to Wisconsin Michigan to the date of refund. The aforesaid wholesale customers and applicable rate schedules are as follows:

(Clintonville, Wisconsin), Rate Schedule FPC No. 24 as supplemented;
(Crystal Falls, Michigan), Rate Schedule FPC No. 36, as supplemented;
(Florence, Wisconsin), Rate Schedule FPC No. 38;
(Kaukauna, Wisconsin), Rate Schedule FPC No. 43, as supplemented;
(New London, Wisconsin), Rate Schedule FPC No. 41;
(Oconto Falls, Wisconsin), Rate Schedule FPC No. 39, as supplemented;
(Shawano, Wisconsin), Rate Schedule FPC No. 33, as supplemented;
(Upper Peninsula Power Company), Rate Schedule FPC No. 25, as supplemented; and
(Wisconsin Public Service Corporation), Rate Schedule FPC No. 12, as supplemented.

---

*Omitted in printing.

(C) Within 15 days of making the refunds required by paragraph (B) Wisconsin Michigan shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with copies of releases from each of the wholesale customers listed in paragraph (B) above.

(D) The Examiner's decision issued January 7, 1964, herein to the extent not inconsistent herewith is hereby adopted as part of this opinion and order.

(E) Exceptions not granted herein are hereby denied.

Commissioner BLACK *concurring.*

APPENDIX C

Pertinent Provisions of the Federal Power Act

RATES AND CHARGES; SCHEDULES; SUSPENSION OF NEW RATES

Sec. 205. (a) All rates and charges made, demanded, or received by any public utility for or in connection with the transmission or sale of electric energy subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.

(b) No public utility shall, with respect to any transmission or sale subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

(c) Under such rules and regulations as the Commission may prescribe, every public utility shall file with the Commission, within such time and in such form

as the Commission may designate, and shall keep open in convenient form and place for public inspection schedules showing all rates and charges for any transmission or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services.

(d) Unless the Commission otherwise orders, no change shall be made by any public utility in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to the Commission and to the public. Such notice shall be given by filing with the Commission and keeping open for public inspection new schedules stating plainly the change or changes to be made in the schedule or schedules then in force and the time when the change or changes will go into effect. The Commission, for good cause shown, may allow changes to take effect without requiring the thirty days' notice herein provided for by an order specifying the changes so to be made and the time when they shall take effect and the manner in which they shall be filed and published.

(e) Whenever any such new schedule is filed the Commission shall have authority, either upon complaint or upon its own initiative without complaint, at once, and, if it so orders, without answer or formal pleading by the public utility, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service; and, pending such hearing and the decision thereon, the Commission, upon filing with such schedules and delivering to the public utility affected thereby a statement in writing of its reasons for such suspension, may suspend the operation of such schedule and defer the use of such rate, charge, classification, or service, but not for a longer period than five months beyond the time when it would otherwise go into effect; and after full hearings, either completed before or after the rate, charge, classification, or service goes into effect, the Commission may make such orders with reference thereto as would be proper in a proceeding initiated after it had become effective. If the proceeding has not been concluded and an order made at the expiration of such five months, the proposed change of rate, charge, classification, or service shall go into effect at the end of such period, but in case of a proposed increased rate or charge, the Commission may by order require the interested public utility or public utilities to keep accurate account in detail of all amounts received by reason of such increase, specifying by whom and in whose behalf such amounts are paid, and upon completion of the hearing and decision may by further order require such public utility or public utilities to refund, with interest, to the persons in whose behalf such amounts were paid, such portion of such increased rates or charges as by its decision shall be found not justified. At any hearing involving a rate or charge sought to be increased, the burden of proof to show that the increased rate or charge is just and reasonable shall be upon the public utility, and the Commission shall give to the hearing and decision of such questions preference over other questions pending before it and decide the same as speedily as possible. [49 Stat. 851; 16 U.S.C. 824d]

FIXING RATES AND CHARGES; DETERMINATION OF COST OF PRODUCTION OR TRANSPORTATION

Sec. 206. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint, shall find that any rate, charge, or classification, demanded, observed, charged, or collected by any public utility for any transmission

or sale subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order.

BLACK, Commissioner, *concurring:*

I agree with the Commission's decision in this case that we should not compute cost of service to reflect the assumed use of liberalized depreciation. This determination should not be interpreted, however, as a policy decision of necessarily general application, and I feel our opinion requires elaboration.

I am concerned that the implication may be drawn from the language of the opinion that we do not intend to examine into the exercise of "business judgment" in any management decision not to use liberalized depreciation. A principal function of this agency is to protect against the erroneous exercise of managerial responsibility which is inimical to the public interest. That a company's "officers firmly believe this to be the wisest course in the long range interests of the company and its customers" is not a substitute for the judgment of the Commission in the discharge of its statutory responsibilities.

Wisconsin Michigan has never elected to take liberalized depreciation—even during the period when this Commission permitted normalization and allowed 1.5 per cent return on the reserve. While this factor alone is not conclusive, it at least indicates that the company's long standing depreciation practices were not dictated by considerations of changing regulatory policy. Should we be faced in the future with a situation in which a regulated utility has abandoned liberalized depreciation to avoid the effects of our recent decision in *Alabama-Tennessee Natural Gas Company*, Docket No. G-5471, *supra* p. 208 or for any reason not consistent with the public interest, in my view a different result would be indicated.

I am also uncomfortable with the Commission's suggestion that to "deprive the Company of its option under the tax law" might be a pivotal consideration. The Solicitor General of the United States in his brief *amicus curiae* before the Supreme Court in *United Fuel Gas Company* v. *Public Service Commission of West Virginia*[1] stated:

> **Where the Code provides such an option, it is in nowise inconsistent with the intent of Congress for a regulatory agency, State or federal, to require a public utility to take advantage of the tax savings and pass them on to its rate-payers. The mere fact that rapid depreciation procedures are not mandatory as a matter of federal tax law does not bespeak a congressional purpose to relieve taxpayers of their obligations under other federal statutes or under State law. In particular, there is no purpose to immunize public utilities from otherwise valid regulations requiring them to utilize available cost-savings opportunities.**

It is clear that Congress in enacting Section 167 of the Code did not intend to bind the hands of the Federal Power Commission and we should not use language implying that we believe otherwise.

ELLIS, *Presiding Examiner:*

I. Nature of the Case and Questions Presented

This is an electric rate case under Section 205(e) of the Federal Power Act, which began nearly two years ago by the filing of certain increases for the rates for wholesale electric service rendered by the Wisconsin Michigan Power Company to nine distributor customers in Wisconsin and Michigan. Revenues are to increase under the new rates by 14.7 percent,[1] and since the Wisconsin Michigan Power Company's business is largely intrastate and retail, it is their program that the new wholesale rates continue to equate the rates being charged to their large retail customers (increases for which were recently approved by the two state commissions). The wholesale rates are subject to the Federal Power Act, and under authority of that Act the Federal Power Commission suspended the increases for the maximum period of five months, after which time, that is on August 30, 1962, the new wholesale rates went into effect by operation of law. Any part of the increase collected which is found by the Commission not to be justified is "subject to further order of the Commission."

---

[1] But, as computed from Ex. C–8A, Schedule 22, the increase ranges widely among the nine cities from 3.7% for Crystal Falls to 31% for the town of Florence.

Six of the nine municipal or wholesale distributors joined in a complaint protesting the proposed increase and presented their own counter-studies of the cost levels thought truly allocable. They also raise a number of fundamental legal objections casting a cloud upon some or all of the increases.

The several issues noted in the Commission's notice of hearing and those raised by the parties include the following:

(a) *Contract:* Whether the rates fixed by the long-term contracts with the cities are binding upon the company and therefore estop the filing of increases under the Federal Power Act or whether the savings clauses in the same contracts are effective to remove any such bar.

(b) *Discrimination:* Whether the differences between the new and higher rates being charged the nine city distributors over the rates remaining in effect for one or more other wholesale customers constitutes an "unreasonable difference" or an "undue prejudice or disadvantage" prohibited by Section 205(b) of the Federal Power Act.

(c) Whether the company's *cost of service*, against which the reasonableness of the new rates is to be tested, should be a unitized or integrated cost study including not only the immediate supplier (Wisconsin Michigan) but also the allocable costs of its parent (Wisconsin Electric Power Company), from which Wisconsin Michigan buys two-thirds of its power supply; alternatively, whether the price paid by the company to its parent company under their filed rate represents a reasonable and justifiable cost for the power so purchased.

(d) Regardless of which cost of service is used—that is, the combined operation of the two companies or Wisconsin Michigan's alone—whether the income tax allowance in the cost of service shall be reduced, effective when the new rates went into effect over a year ago, to allow only that amount for income taxes which the company would have paid to the Internal Revenue Service had the company elected to take advantage of the accelerated rates of depreciation provided by Section 168 of the Internal Revenue Code, the new and higher guideline rates of depreciation announced by the Internal Revenue Act beginning in 1962.

(e) A number of questions related to the *allocation* of expenses between "demand" and "energy" and the assignment of the total costs used in the service to the nine wholesale customers.

(f) In computing the cost of service based upon the 1961 test year, whether a number of *adjustments* are required to reflect indications of later change.

(g) The level of the *rate of return* to be allowed in connection with the cost of service; also certain minor questions as to the rate base applicable.

(h) A possible question of *rate design* and of certain special tariff provisions.

There is no jurisdiction question since this same service—that is, the company's sale of electric energy at wholesale in interstate commerce to these cities—was considered by the Commission some years ago and determined to be subject to the Federal Power Act, and this was affirmed by the Court of Appeals for the Seventh Circuit. 197 F. 2d 472. It is stipulated in the present record that the jurisdictional facts underlying that decision have not materially altered (3T72),

II. A Procedural History

This case began in January 1962, with the filing of nine new rate schedules by the Wisconsin Michigan Power Company, to become effective March 30, 1962, as follows:

Supp. 3 to Rate Schedule FPC 12—Wisconsin Public Service Company.
Supp. 3 to Rate Schedule FPC 25—Upper Peninsula Power Company.
Supp. 3 to Rate Schedule FPC 36—City of Crystal Falls, Michigan.
Supp. 2 to Rate Schedule FPC 43—City of Kaukauna, Wisconsin.
Supp. 2 to Rate Schedule FPC 33—City of Shawano, Wisconsin.
Supp. 6 to Rate Schedule FPC 24—City of Clintonville, Wisconsin.
Supp. 1 to Rate Schedule FPC 41—City of New London, Wisconsin.
Supp. 2 to Rate Schedule FPC 39—City of Oconto Falls, Wisconsin.
Supp. 1 to Rate Schedule FPC 38—City of Florence, Wisconsin.

Just before the new rates were to go into effect, that is on March 29, 1962, the Federal Power Commission's order under E-7026 directed that a hearing be held concerning the lawfulness of the new rate schedules, and in the meantime suspended their effectiveness for a period of five months, so that the new rates could not go into effect until August 30, 1962. The Commission's notice lists the nine municipal distributors affected by the increased rates and cites the protest filed by six of them on February 26, 1962. Three grounds of the protest are stated, namely, the contract rate question, the reasonableness of the rate level, and the discrimination from the failure to increase at the same time the wholesale rates to certain rural electric cooperatives.

The Commission's order recites the following questions to be examined before the lawfulness of the rate can finally be determined: whether the rate schedules are justified, or result in excessive rates or charges, whether they place an undue burden on ultimate consumers or may be unjust, unreasonable, unduly discriminatory or preferential or otherwise unlawful, whether the rates may produce an excessive return on the net investment properly allocated to the service to the nine customers, whether the allowances for purchased power from the parent company is excessive, whether there are reasonable allowances for operating expenses and plant investment, and for any cost adjustments to the test year.

The Commission's order did not fix the date of the hearing but provided for petitions to intervene, and in a few days there was received the petition on behalf of six of the nine wholesale customers affected by the increases (Cintonville, Florence, Kaukauna, New London, Oconto Falls and Shawano, all in Wisconsin); following which the Commission's order of May 22 permitted their intervention. However, in the meantime, that is on April 26, the Secretary's order issued directing that the hearing be held on June 4, 1962.

Because of the schedule ensuing, the prehearing conference contemplated by the FPC rules, Section 1.18, could not be called; instead, since no testimony had been served and the cross-examination could not then begin, the opening day of the hearing was converted into such a conference. At this time it developed that the company had supplied its basic cost justification with the filing of the rate increases and certain other information as requested from time to time by the Staff, including a number of proposed exhibits, with copies furnished to the counsel for the cities.

But on the other side, nothing or practically nothing had been done. The intervener cities were not prepared to furnish anything of consequence in support of the general allegation that the increases are unreasonable, nor had the Staff begun its program of verification. Whether or not so indicated to the Commission, neither by the time the order issued fixing the date of the hearing nor on the date of the opening "hearing" itself had the Staff yet had occasion to begin its field study and check of the company records. In the light of this impasse, it was the Staff's suggestion on the opening date that the evidentiary hearing be deferred until this field work was done. The indication was that this would require many weeks but might result in a considerable narrowing of the issues. So far as the cities are concerned, the forum was given to understand that they might bring in a few witnesses but that the cities' case "will not be lengthy at this point" (1T10). This was the reaction after the intervener cities had seen all or nearly all the material to be submitted by the company. Accordingly, a recess at least until the end of July was ordered with the concurrence of all parties.

An informal session on July 31 disclosed that the Staff examination was only beginning and the parties agreed to continue the case until September 18, 1962, with rebuttal testimony to be submitted in advance.

However, on August 31 the three parties filed a joint request for continuance to October 23, saying that the field work was not completed and that time was also required to work out possible areas of agreement or at least to limit the areas of disagreement. At the September 18 meeting it was revealed that the company had served upon the other parties a study supporting its cost of purchased power from its parent company, also a cost analysis concerning the service to the rural electric cooperatives. It had still not been found possible to complete and cross-serve direct and rebuttal cases of all sides, nor had the Staff position on the basic issues been stated, but its field work was completed. It now developed that an extensive series of conferences might be required for the purpose of working out a general settlement of the entire case, at least, that proposals and counter-proposals for settlement would be tendered. The settlement which was hoped for would, of course, have eliminated the need for any hearing, briefing, or initial decision. The cities undertook "right away" to get at the study of the new cost of service information lately served by the company. Because of the uncertainties no hearing date could be determined or agreed upon.

During the ensuing period the engineer witness for the cities made a total of three field trips to Wisconsin and there followed a great deal of exchange of data and continued negotiations toward settlement of the entire controversy. Finally, in January, it still appearing that the settlement efforts would be unavailing, the opposition parties were notified the hearing would be set in two weeks, whereupon the parties joined in filing on February 21, 1963, a proposed schedule for the service of the final testimony of the cities and of the Staff, for the service of the rebuttal testimony and for the resumption of the hearing, which was fixed for May 13, 1963, at Appleton, Wisconsin. This is the schedule that was followed and the hearing took place on 16 days through June 11, 1963, nearly all of it at Appleton. At the final session the parties concurred on a schedule of briefing which called for initial, answering and reply briefs, the final date for which became fixed and agreed as October 7, 1963. This was over a year after the new rates had gone into effect subject to refund (August 30, 1962) and over two years after the corresponding increase in the intrastate rates to the retail users had been authorized by the state commission (May 26, 1961).

III. The Nature of the Sale

It is significant that the service to the six cities at rates equal to the large-user retail rates is not a new one but has been continuous for at least 20 to 40 years and the rates have been on file here for many years. In 1949, a question arose concerning an indirect rate increase to the cities of Kaukauna, Shawano, New

London, Clintonville, the Oconto Electric Co-Operative and certain others; that is, a change was filed in the fuel adjustment clause of the filed tariff. The Commission issued an order to show cause to determine whether these sales are subject to the Federal Power Act, resulting in the decision of May 29, 1951, 10 FPC 170, to the effect that the sales are at wholesale and in interstate commerce and must be made only at the rates effectively on file with the Commission as required by the Federal Power Act. This ruling was affirmed by the Court of Appeals for the Seventh Circuit and certiorari was denied by the Supreme Court on April 13, 1953 (197 F. 2d 472, 345 U.S. 934).

The Commission's Opinion, 10 FPC 170, rather fully describes the company's operations, requiring it now only to be summarized to the effect that the company serves at retail and through the wholesale outlets referred to a large segment of northeastern Wisconsin, operating in two far separated divisions, the Southern Division comprising the area around Appleton, and several counties northwest of it, and the second, well over 100 miles north, comprising the Northern Division serving a number of retail and wholesale customers in the Upper Peninsula of Michigan and in the northeastern counties of Wisconsin. The two divisions are joined by a 138 kv transmission line, and the customers grouped at either end are served through a series of smaller transmission facilities operating at various lower voltages. Substantially all of the company's generation facilities are hydroelectric units located near the north end of the system, and they supply roughly one-third of Wisconsin Michigan's needs, varying considerably according to the season of the year. The remainder of the power supply is acquired by purchase, practically all of it from its parent company, Wisconsin Electric Power Company, which delivers to Wisconsin Michigan at a junction a little east of Appleton, some at other points. Small amounts of power are acquired from other independent power systems. Excess hydrogeneration may on occasion be sold to the parent company. In general, the needs of the company's customers are supplied through the company's hydrogeneration (about one-third) and through purchase of steam-generated power from its parent, Wisconsin Electric (nearly two thirds).

The company's wholesale business with the nine city distributors accounts for 8.2% of its total annual revenues, which come to slightly over $19,000,000.[2] The company's installed hydroelectric generating capacity totals 90,185 kw, which is to be compared with its 1961 system peak demand of 216,669 kw. The parent company's steam generating capacity is about 20 times greater than the other's hydro, since it serves primarily the populous area within 50 miles of Milwaukee. The extent to which the operation of the two companies is in fact a joint program for the production of power for all of the customers of both is discussed below, under the heading "Unitization of costs of service."

It has been Wisconsin Michigan's program to correlate their wholesale rates by the technique of charging the wholesale customers the same rate as that filed with the respective state commissions for service to the large-user retail class of customers. The rates had not been increased at least since 1937 and are about the lowest of any municipal purchase rates in the state of Wisconsin. Recently, the company has filed with the Public Service Commission of Wisconsin, received approval and put into effect an increased rate for the retail users (which, of course, are subject to the state's jurisdiction). The new rates for the retail service area within Wisconsin went into effect in May 1961, some months before the company filed its corresponding increase for the wholesale rates which is here in issue. Similarly, the Michigan Public Service Commission in 1960 approved an increase to the same level for the retail customers in the Upper

---

[2] Ex. C-3A, Sched. 20. From Ex. S-4 is taken the system map reproduced herewith.

Peninsula of Michigan, and that increase is now proposed for the two Michigan wholesale customers. The concept is important that the company has consistently maintained a policy of the same rates for its large users and for its wholesale customers; that the large users' retail rates were increased in 1960 and 1961; and that the corresponding increases for nine of their ten or more wholesale customers is the subject of this proceeding. The "ten" wholesale customers is explained in this way: Six are city distributors whose rates have now been increased, subject to refund, and who are joined as interveners to protest the exaction of the increased rates. Three more are distributors in Wisconsin and Michigan who are subject to the same rate increase but have either failed to respond and take part or have indicated affirmatively that the increase is not objectionable. The tenth wholesale customer is the Oconto Electric Cooperative, which has hitherto been treated as one of this group, paying the same rate, but whose present rate was not increased in the company's filing of January 1962. The effect of that apparent discrimination—increasing the rates to nine out of the ten customers—is discussed below in Part V.

IV. Is the Increase Barred by Contract, Under Mobile?

Invoking the trilogy of decisions of the Supreme Court which are called Mobile, Sierra and Memphis, both the Staff and the city interveners object to the increase for the six cities *in toto* upon the dispositive ground that the company's long-term contract with each city contains a fixed rate, which, under ordinary principles of contract, the company is not free to abrogate unilaterally. The issue is stated succinctly in the interveners' brief as follows:

> The Intervenors rely on the principles announced by the United States Supreme Court in *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956), *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348 (1956), and *United Gas Pipe Line Co.* v. *Memphis Light, Gas & Water Division*, 358 U.S. 103 (1958), as applied by the Commission and the courts. The lesson of those decisions is that an electric utility may not unilaterally change its contract rates by filing a new rate schedule under the filing provisions of section 205(d) of the Federal Power Act unless it has expressly preserved such right in the contract. Only changes which are 'otherwise valid' may be unilaterally put into effect under section 205(d).
>
> The company asserts that its proposed changes are "otherwise valid," contending that certain savings clauses contained in each of the contracts constitute contractual consent by the Intervenors to unilateral changes. Absent the savings clauses relied on by the company, there is no question but that the unilateral filings would have to be rejected by the Commission. The pivotal issue, therefor, is whether such savings clauses are effective to convert an unauthorized change into one "otherwise valid." In short, do they constitute valid consent to a unilateral change which may be put into effect under section 205(d) of the Federal Power Act?

Parenthetically, had this position first taken by the Staff in its brief filed on July 29, 1963 (and consistently maintained by the six cities throughout) been made at the outset of the case the subject of a motion to dismiss as to their increases, and had the motion been sustained under a procedure akin to demurrer, there would have been eliminated a year's delay in the case for the preparation of the cost studies and the expensive and protracted testimony; in fact, the issue could have been settled finally before the new rates went into effect at the end of August 1962.

(A) *The contracts mean what they say:* The question on its merits is purely what the company and the respective cities meant by the admitted language of the contracts, or at least what they must be understood to have meant. The contracts of four of the six cities (New London, Shawano, Oconto Falls and Clintonville) are almost identical; and the quotation of the critical provisions from one of them (New London, Ex. C-12) is enough:

> Section 1. . . . the distributor shall pay to the Power Company . . . an amount computed on the rates and charges set forth in Wisconsin Michigan Power Company's large Users' Power Service Rate VII now on file and approved by the Wisconsin Public Service Commission, to wit:
>
> Demand charge:
> First 50 kilowatts of demand per month—$2.25 per kilowatt
> Next 150 kilowatts of demand per month—$2.00 per kilowatt
> Next 100 kilowatts of demand per month—$1.50 per kilowatt
> All over 300 kilowatts of demand per month—$1.25 per kilowatt
> Plus an energy charge as follows:
> Energy charge:
> First 10,000 Kw-hr. consumed during month—1.25¢ per kw-hr.
> Next 10,000 Kw-hr. consumed during month—1.15¢ per kw-hr.
> Next 10,000 Kw-hr. consumed during month—1.05¢ per kw-hr.
> Next 10,000 Kw-hr. consumed during month—0.95¢ per kw-hr.
> Next 20,000 Kw-hr. consumed during month—0.85¢ per kw-hr.
> Next 140,000 Kw-hr. consumed during month—0.75¢ per kw-hr.
> All over 200,000 Kw-hr. consumed during month—0.65¢ per kw-hr.
>
> * * * * * * *
>
> Section 2. It is hereby agreed and understood that should there be any revision and/or change in said Rate VII approved by the Wisconsin Public Service Commission, at any time during the life of this contract, then the Distributor shall under this contract automatically receive and accept such revised rates.

Thus the question is what is meant by Section 2, where each distributor agrees to accept "such revised rates" according to any revision or change which may be approved by the Wisconsin Public Service Commission in the Rate VII there on file and applicable to the company's large-user retail customers, whose rates are, of course, subject solely to the jurisdiction of the state commission. The first section quoted above bears witness that, as testified time and again in the case, it is and has been the company's policy for many years to charge to its wholesale distributor customers the same rates which, under the aegis of the state commission, it charges to its retail customers of the larger class.[3] The company's position is put very simply that they certainly did not intend to bind themselves for a long term of years to charge to the wholesale customers only the large user's retail rate in effect at the time of the contract signing, but that Section 2 was inserted for the express purpose of changing the wholesale rate agreed upon to accord with and equate any changes, up or down, which the state commission might approve and make effective for the large-user retail customers subject to its jurisdiction. The contracts are dated in 1949, 1948, 1944 and 1945, respectively. Two of the contracts (Shawano and New London) were for 10-year periods with 10-year renewal, subject to two-year notice of termination (Exhibit C-11 and Exhibit C-12). Clintonville's was for five years with one-year renewal periods and Oconto Falls was for three years with one-year renewal periods.

---

[3] There is a great deal of precedent for this rate policy. See, *e.g.*, Re *Southern California Edison Co.* (1957) 21 PUR 3d 15, 43, Re *Kentucky Utilities Co.* (1958) 22 PUR 3d 113, 120.

With that background, to the net effect that—

(a) Ever since the service to the towns began as far back as the 1930's the company has charged the cities the same rate that the state commission has sanctioned for the large-user retail customers;

(b) The various contracts which the Staff and the cities rely upon specify that the cities shall pay charges equal to Rate VII on file and approved by the Wisconsin Public Service Commission;

(c) Each contract contains also, as a further (and possibly even unnecessary) precaution, a savings clause to the effect that if, as and when a change in that Rate VII becomes approved by the state commission, then the city shall receive and accept an equal revision in its rates—

the solution seems to be most uncomplicated, namely, the company agrees to serve the cities at the rates they charge their large retail customers, subject to change (if, of course, FPC approves) as those same retail rates may be changed from time to time with the approval of the governing state commission. In that view, no *Mobile* problem arises at all since the company has not bound itself for all time to the rates then in effect; rather, as in *Memphis*, the company has said simply that it will charge certain rates but in certain circumstances those rates will be changed, and the cities agree to accept such change, with two conditions, namely: (a) the changes may not exceed the like changes made in the corresponding local rates for large retail users as approved and made effective by the state commission, and (b) by reason of the Federal Power Act there is necessarily written into the contracts, by operation of law (9 FPC 443), the further reservation that no change may become finally effective until considered and approved by the Federal Power Commission in a proceeding such as this one.

(B) *The Staff's contentions:* In that view, the discursive contentions of the cities and the Staff require but short answers.[4] First off, the Staff begs the question by saying the record is clear that the company "executed fixed rate contracts with each of these six wholesale customers." Of course, they are not; their plain language says their rates are to equal the Rate VII rates *as* they may be changed from time to time.[5] How can it be said that a provision providing for a rate change "disables" the company from seeking that very change?

Second, the Staff makes a great deal of the company's precautionary actions taken after this question arose for the first time, apparently in 1959 or 1960, and the contracts with the three distributors which do not appear in this proceeding and those with Clintonville and Oconto Falls became subject to cancellation. Saying the savings clause had been found not satisfactory, the company accordingly rewrote or amended them so as to allay any possible doubt and make it even more clear that the rates are subject to change by new filings under the Federal Power Act. The Staff seems to regard this as some sort of fatal admission by the company that the former contracts did not mean what they say. How that is to be regarded as "contemporaneous construction" (Staff

---

[4] The special language in the contracts with Florence and Kaukauna is more fully considered below.

[5] It seems immaterial that there are other differences, such as delivery voltages and fuel clause adjustments, from those appearing in the retail Rate VII—it is the demand and energy block rates which are incorporated by reference.

Brief, page 35) when it was made many years later is hard to imagine; anyway, no reason or authority is suggested why the company could not or even should not seek an improvement in their contract terms,[6] without being held to the fell admission that, fairly and honestly viewed, the contracts did not already fully and lawfully sustain their position.[7]

Third, the alleged "fact" that these are fixed rate contracts is somehow supposed to be further demonstrated by one special feature of the Wisconsin public utility laws. A contrast is noted with the Federal Power Act, under which a proper change in rate can be filed and put into effect thirty days later, subject to suspension for five months and to refund thereafter, following the FPC's final decision. But in Wisconsin, a change in the retail rates does not work that way. It becomes collectible, not upon filing, but only from and after the final order of approval by the state commission; it does not, as in the case of the interstate rates, become effective shortly after filing subject to refund when the Commission so orders. Why that makes any difference here is not explained. In fact, the difference seems to be recognized in the very language of the contract as quoted, which refers to a change in the local rate "approved by the Wisconsin Public Service Commission." The background here is that, as explained, the same change which is the subject of this case had long since been filed with the state commission for the large retail users and had been approved by the Wisconsin Commission. The same change for the large users in the state of Michigan has long since been filed and approved by the Michigan Public Service Commission.[8] Thus the simple fact is that the local Rate VII has been changed, and the change has been approved by the applicable state commission, and the present contracts that are supposed somehow to disable the company from claiming a change contain in their very words a provision calling for a corresponding change upon the happening of that very event. The result is that the higher rates are being charged to and paid by the large retail users, but the identical increases were not being charged to the cities until the present filings became tentatively effective on August 30, 1962, after the five-month suspension period. If the increases are not continued, the company will not be receiving the increased rates their contracts lead them to expect and the cities are not paying the increases they agreed to (subject to FPC's ruling on them). The Staff (September brief, page 49) calls for more "definitive terms and conditions that should appear on the face of the contractual instruments," but it is believed the terms are simple and obvious and they should be given effect according to their plain terms.

---

[6] Compare the same point in the field of legislative interpretation: When an FPC regulation was challenged as beyond its statutory authority, as proved by the Commission's efforts to achieve a like result by legislative amendment of the statute, the Commission's brief to the Ninth Circuit in *Superior Oil Co.* v. *F.P.C.* (March 11, 1963) says this request for congressional action "certainly provides no indication that the Commission doubted its authority to proceed on its own" (p. 47). Similarly, the company's perfecting amendment to their contract provides no indication that the company doubted or should doubt its contractual authority to proceed by relying on the previous savings clauses.

[7] Surely, if that sort of evidence has to be paid attention to, it would be more significant to note the company's 1959 action soon after they first submitted the rate increases. It was their request they be made effective, quite in accord with the savings clause, namely thirty days after the approval by the state commission of the corresponding change in the corresponding local rates. (See the company's letter of September 11, 1959, in the official files.) This, of course, is consistent with reliance on the savings clause, not with repudiation of it.

[8] The state commission orders are in evidence as Exhibits C-17 and C-20 dated respectively May 26, 1961, and January 21, 1960, long before the present increases were filed in 1962.

(C) *The city interveners' contentions:* The approach of the city interveners is on a somewhat different basis. At least, they do not belie the existence of the savings clause (Section 2, quoted above), but they claim it is not a valid consent to the company's proposed unilateral rate change. Just why is not stated. Again there is a reference to the Wisconsin procedure, under which the company could not charge the retail increase until after the state commission had approved; but since the state commission has approved (the very contingency the contracts specify), the point is quite irrelevant. The next claim is that the savings clause purports to impose automatically whatever rates are determined by the Wisconsin Commission for the comparable retail customers, and this is viewed with alarm as an invalid, indirect imposition of state regulation on these interstate sales. This is not true and anyway is not the point. Regardless of the state rates and regardless of the state commission action on the state rates, the increase in the interstate wholesale rates becomes finally effective only if found just and reasonable by the Federal Power Commission under the Federal Power Act, as every one in this case well understands by their participation in it and as the company recognized by withholding the effective date of the increases for the five months suspension period provided in the Federal law. Anyway, the question at this point is not what increases the cities must pay—that problem comes up in the sections which follow below—the only immediate question is whether the company by its contract has, to quote the Supreme Court cases cited, abrogated or bargained away its right under the Federal law to file for the increases and seek the Power Commission's approval effectively to collect them.

The cities' brief for some reason relies on the line of natural gas cases where the producers' sales contracts call for buyers to pay whatever price might be fixed by a valid state commission order fixing the wellhead gas price, which provisions were held to be ineffective.[9] The differences are so obvious as hardly to require discussion: at least three come to mind, *viz.*: (a) There the state commission orders were held to be void *ab initio;* here there is no question but that the state commission orders are valid for what they apply to, the retail rates. (b) There the state commission orders applied to the wellhead sales of gas in interstate commerce, itself the subject of Federal regulation since the cases of *Phillips* and *Deep South;* here the state commission orders relate directly only to sales that are within the state jurisdiction—that is, the sales at retail. (c) In *Pan American*, the increases were sought on the basis that the buyers by their contracts had agreed to pay them, the net effect of the litigation was to enforce the contract rights of the seller; here it is not a common law action in assumpsit to collect anything, this is merely a proceeding to determine whether the rates filed call for a just and reasonable increase (in which case they are chargeable and collectible with or without a contract promise to pay them; the resulting payment obligation accrues by force of the Federal Power Act which requires the filed rates to be charged, subject to FPC ruling, not merely by force of the private contract). In other words, the state commission action here is not at all the controlling force which makes the just and reasonable increases payable; the only effect in this immediate connection of the state's action upon the retail rates is to counter and overrule the thought that the company by its contract has disenabled itself, or abrogated its right, to file increases, justify and charge them up to the level (as a ceiling) of the newly effective state rates for the corresponding retail sales.

---

[9] *Pan American Petroleum Corporation* v. *Kansas-Nebraska Natural Gas Company, Inc.*, (CA 8, 1962), 297 F. 2d 561; *Cities Service Gas Company* v. *F.P.C.* (CA 10, 1958, 255 F. 2d 860, 864, where this statement in the opinion suggests the answer here: "If the Kansas order were valid, there is no question but that despite the protests of the parties the contract would be altered by the order." In the present case, the Wisconsin order is valid.

A much more credible, even if erroneous, point made by the cities is that the savings clause is similar to the two-party favored-nations escalation clauses, which for the gas business have now been banned by regulation of the Commission. Indeed the similarity is striking—there the gas purchaser agrees to pay to the producer a certain price, plus an increase to equal any higher price the same buyer later on pays to somebody else for similar gas in the area. Here the buyers (that is, the cities) have undertaken to pay to the seller a certain specified price plus an increase to equal any higher price which the seller later on is permitted to charge to somebody else, namely the large retail users. It is true that, since such clauses in the gas purchase contracts lead to uncertainty, the F.P.C. has found them not to be in the public interest and has prohibited their current filing. Even, however if that comparison applies here it fails for the double reason that the Commission's restriction on the use of this clause (a) applies only to the gas business and was not extended to the electric business under the Federal Power Act, and (b) the Commission's ban was not made retroactive to cover contracts already filed. 18 CFR § 154.93, *cf.* 13 FPC 1576, 1584. Hence it results that gas contracts made at the same time as these sales were fully accomplished and enforced if otherwise within established ceilings, including their escalation clauses,[10] and the cities now declare them to be "analogous" to the clauses in their own contracts.[11] Thus the cities' comparison proves too much—the gas purchase favored-nations clause would be valid for this very period and the comparable electric rate savings clause is equally valid.

(D) *The Florence contract:* The contract with the town of Florence (Exhibit C-13) has a somewhat longer savings clause; perhaps for that reason it is claimed to be more vague or at least more ambiguous than the others. Under "Prices," Section 1 calls upon the customer to pay "an amount computed on the rates and charges set forth in Wisconsin Michigan Power Company's Large Users' Power Service Rate VII now on file and approved by the Wisconsin Public Service Commission, to wit: . . ." There follow the demand and energy block rates, as listed above, and in Section 2——

> *Section 2.* It is hereby agreed and understood that should there be any revision and/or change in the above rate as applied to other customers receiving the same class of service approved by requisite governmental authorities, at any time during the lift of this contract, then the Customer shall under this contract automatically receive and accept such revised rates. The rate structure utilized in this contract, although approved by the Public Service Commission of Wisconsin on December 18, 1948 (supplemented by order of December 23, 1948) has been questioned by the Federal Power Commission. Each commission has claimed jurisdiction over the matter. Should a withdrawal, correction or modification of such rate result and

[10] *Cf. Pure Oil Co.*, 25 FPC 383, 389, affirmed 299 F. 2d 370 (CA 7, 1962); FPC brief in *Superior Oil Co.* v. *F.P.C.* (CA 9), March 11, 1963, p. 46. It is as the Supreme Court says respecting the earlier "spiral escalation" clauses: "The effect of a clause of this type is only to permit the producer to resort to the filing provisions of § 4(d) of the Act." *Wisconsin* v. *F.P.C.* (1963), 373 U.S. 294. In his dissent on other grounds, Mr. Justice Clark said, "Obviously the clauses have no effect whatsoever in determining the reasonableness of a rate from the public standpoint. They do have the effect of triggering the filing of increased rates." That is what occurred here.

[11] Cities' July brief, p. 11.

> the effect thereof be to lessen the amount of the charge resulting from this contract, the customer will be given an appropriate refund consonant with the facts.

The background here is that before 1949 (when the Florence contract was signed) there was some doubt and confusion as to whether these sales are subject to Federal or to state regulatory jurisdiction. On May 5 of that year the Commission's order suspended a number of the rate schedules to the cities now in this case (8 FPC 851). There followed a "show cause" order issued February 10, 1950, to determine whether the municipal sales for resale are jurisdictional (9 FPC 457), the resulting order from which became the subject of the court action in the Seventh Circuit, affirming the Commission's finding of jurisdiction, which was not finally settled until 1953 with the denial of certiorari by the Supreme Court. Because of the uncertainty then prevailing, the 1949 contract with Florence inserted the all-encompassing provision above quoted.

Why the contract should be regarded as unclear is difficult to perceive since it calls for the identical rates being charged to the large retail users (Rate VII), and this is obviously the rate referred to in Section 2 where the language mentions "the above rate as applied to other customers receiving the same class of service." Since there has now, that is since 1961, been a change in that Rate VII as applied to other customers receiving the same class of service—that is, the large retail users—and that change has now been approved by the requisite governmental authorities—that is, the Wisconsin Commission in its order of May 26, 1961, Exhibit C–17—it is manifest that there has occurred the contingency which is the subject of Section 2 above quoted and that by force of that section the company is relieved of its common law contract obligation to continue the service at the previous rates. That is, the company is not to be regarded as having abrogated its right under the Federal Power Act to file increased rates and charge them (up to the ceiling of the new Rate VII approved by the state commission), subject to the Federal Power Commission's suspension action and final determination whether the increase is just and reasonable, as the Federal Power Act provides.

Again, the cities in their first brief at page 10 confuse the issue by claiming that the town of Florence should not be regarded as "bound automatically by rates set by the Wisconsin Commission." Of course that is not the question, nor is it the case. The purpose and effect of the quoted Section 2 are not to bind the town to anything but to unbind the company; what the town is bound by is Section 205 of the Federal Power Act, the rates filed by the company under authority of that Act, and the decision of the Federal Power Commission on the validity of those rates.

(E) *The Kaukauna contract:* With respect to one of the six contracts—that is, the arrangement with Kaukauna for a substantial supply of power to supplement the city's own hydrogeneration facilities on the Fox River—the city's objection based upon the contract does have merit, in part, and requires different treatment. Because of the large standby facility required to be maintained by the company, in order to meet the widely varying needs of the city during periods of greater or lesser river flow (Exs. C–4, p. 9 and S–14), the contract hitherto in force contained a specific provision for a minimum bill, which comes to $76,667 per year. In its new filing the company has substituted a formula arrangement which would result in the requirement of a bill of at least $315,000 when there is a high water year. There is nothing in the savings clause in Kaukauna's contract to open the door to this unilateral change by the company, and under the doctrine of the *Mobile* case it would have to be regarded as an unauthorized change. This objection by the cities the company seems to concede, in its second brief at page 19; accordingly, it will be expected that any refiling of the Kaukauna rate, as discussed below, will restore the former provision for the annual minimum charge.

Upon the general question of the company's freedom or lack of freedom to file under the contract for rate increases—that is, whether it is estopped by the record, so to speak—the Kaukauna contract has another special arrangement. Article III of the contract in question, Exhibit C-15, covers the prices to be charged and paid and Section 2 contains the city's undertaking to pay "the following rates and charges," that is, the same block of four demand charges ranging from $2.25 to $1.25 per kilowatt per month and seven energy charges ranging from 1.25 cents per kwh down to 0.65 per kwh. Comparing the figures with the retail rate for large users on file with the state commission—that is, Rate VII set forth in Exhibit 16, page 4—it is noted and found that the various words and figures of the two blocks of charges are identical. Then there follows in the contract an escalation clause based upon changes which may occur in the cost of coal used by the Wisconsin Electric Power Company (increasing the energy charge by .02 cents for each one-cent increase in the cost of one million heat units), which appears to be copied exactly from the same Rate VII on file at Madison for retail users (Ex. C-16). The next paragraph of the contract calls for a seven percent discount because the buyer is served at a voltage of 33,000, and this seems to recapitulate exactly that part of Rate VII known at Rate VII-a, giving the same discount to other customers who take at primary voltage—that is, above 4,000. Numerous other provisions, referring to the maximum demand, the standard power factors, the billed demand, and other matters, appear to recapitulate corresponding provisions of Rate VII. At this point, there follows the purported savings clause, which heads as follows:

> *Section 4.* If, during the period of this agreement, rates different than herein quoted are made applicable to the general class of service covered herein, then such different rates shall be applicable for the service rendered hereunder.

Surely it is not open to question that this is *some* form of an escalation clause intended, upon the happening of some certain or uncertain contingency, to make different rates applicable or at least to make different rates subject to filing with the proper commission and to become collectible subject to the Commission's action under the governing statute. The contingency—that is, the triggering event—is said by the language of Section 4 to occur when a different set of rates is "made applicable to the general class of service covered herein." Now it can hardly be denied—indeed, a certain amount of ambiguity seems to be admitted—that the phrase "general class of service" could be taken out of context and read to mean a number of things. Among those suggested at the hearing were the service (a) to other customers who buy in large quantities, (b) to other customers who buy at high voltages, (c) to other customers who buy for resale, or (d) to other customers who buy as an auxiliary service to their own generation capacity. The crux of the opposition's case seems to be that since the questioned phrase could mean so many things, the entire clause must be held to mean nothing at all. But that sort of narrow, wooden philosophy of construction, "making a fortress out of the dictionary," is not the approach to the reading of a contract, either under Wisconsin law or otherwise.[12] A review of the panorama of circumstances surrounding the transaction makes clear what might otherwise be doubtful, and makes it pretty evident that the several officials of the city who signed the document had no question of what they were bargaining for or where they stood as a result, so far as rates are concerned, and the company's privilege to change them, *subject* to the law of the land.

In the first place, Kaukauna had been dealing with the company for years and the present contract only repeats word for word the Section 4 that appeared in the contract of December 5, 1945, Exhibit C-15A. It strains credulity to suppose that the town officials were not and are not fully aware that for a quarter of a century at least they have been charged the same rates that the company charges to its large retail users[13] and that these same rates appear in Kaukauna's contract and also in the similar contracts of the neighboring towns; in fact, nobody denies it.

Secondly, the time factor must be accounted for. When the savings clause originated, the *Mobile-Sierra opinions* (1956) had not yet been announced by the Supreme Court. At the very time that the clause was repeated in the renewal contract of January 1, 1956, the Federal Power Commission had decided and its Staff was contending to the Supreme Court that *no* savings clause at all (whether ambiguous, vague, or clear) is needed to permit the filing of increases. See *Re P.G. & E. Co.* (1954), 13 FPC 200, and for the argument of November 8, 1955, before the Supreme Court, upon Sierra's court review of that case, see 100 L. ed. at p. 390. It is cavalier treatment, indeed ironic, for the same Staff now to contend the contracting parties should have anticipated the Supreme Court's decision, that they could not rely on the FPC's announced position, and that they should have had the prescience to revise and perfect their old and customary form of savings clause in order, as the Staff now suggests, to make it more definitive (Staff's September brief, page 49).

In the third place, even if the company's recent letters of cancellation to several of the cities did amount to a change of position—which they do not—the Staff view that the company is estopped from relying on its original version seems to require of the company a degree of consistency to which the Staff and other parties in this proceeding are strangers. Thus—

(a) When the company first submitted these increases for filing (see note 7 above) they were returned by a letter of this Commission's Secretary dated September 22, 1959, saying,

> It appears from the texts of the "saving clauses" . . . that no rate changes such as proposed may be tendered by you to this Commission until the rate approval from State Commissions, referred to in those "saving clauses," has been obtained.

Now, that state approval having since been obtained, the Staff is in the position of saying they can't be filed anyway.

(b) Before that rejection in 1959, the city customers were asked whether there was objection to the filing of the new rates by the company, particularly in the light of the Memphis-Mobile-Sierra decisions. Official notice is taken from the files of the Commission of the reply from Mayor Bayorgeon of Kaukauna, dated September 10, 1959, which quotes their savings clause (Section 4 of the contract as above) and states:

---

[12] 12 Am. Jur. Contracts. § 250 "Where the language of an agreement is contradictory, obscure or ambiguous or where its meaning is doubtful, so that it is susceptible of two constructions, one of which makes it fair, customary, and such as prudent men would naturally execute, while the other makes it inequitable, unusual or such as reasonable men would not be likely to enter into, the interpretation which makes a rational and probable agreement must be preferred . . . An agreement will not be interpreted so as to render it oppressive or inequitable as to either party or so as to place one of the parties at the mercy of the other, unless it is clear that such was their intention at the time the agreement was made."

[13] Not counting, of course, the special minimum rate which is referable to Kaukauna's special, auxiliary service.

> Under this article we are assuming that they would have the right to ask the Federal Power Commission for an increase in rates, to change the rates or rate schedules.[14]

In the fourth place, the significant relationship of the rate increase for Kaukauna with that applicable to the other cities (based on the increase in the Rate VII charges to the company's industrial or large-user customers) is illustrated by their joint reaction when the increase, as just stated, was first tentatively filed in 1959. His Honor, Mayor Bayorgeon of Kaukauna, furnished the Commission under date of September 29, 1959, a copy of the minutes of a meeting called by him which included representatives from Oconto Falls, the Oconto Falls Cooperative, Shawano, New London, and Clintonville, all of whom met to discuss the problem arising out of the request for the company's rate increase.

In the fifth place, the ambiguity in Kaukauna's Section 4 may be explained by its history. The company has served the city at least since 1919, and along with all the other cities, Kaukauna has been charged consistently the company's large-user retail rate. If the present Section 4 in the contract renewed in 1956 (when the Mobile question was in the courts) were its first manifestation and had it been drafted by the attorneys for the parties, there might be some question as to whether the particular meaning now selected by the company could be given effect here. But its genesis is quite otherwise. Since no question had come up about it, the language of the clause in the much older contracts was merely repeated. The negotiator of the terms was the company's commercial manager; he is their sales manager and is not required to be an etymological purist devoted to verbal niceties. It is comprehensible that to him the language is ample to mean what the company now contends it means—that is, that Kaukauna's rate is geared to the company's large-user retail rate. The admitted fact that the language of Kaukauna's Section 4 contains certain imprecision and perhaps could mean a number of things does not require that it be held to mean nothing at all.

What is most significant here is that three witnesses testified for the cities, including the manager of the Kaukauna utility, and many other representatives of the cities were in attendance throughout the hearing and not one of them testified or came forward to present any contrary view as to the meaning of Section 4 in Kaukauna's contract or in any of the others. The city of Kaukauna is only nine miles from the site of the hearing in Appleton, and yet not one of the seven signatory officials of the city of Kaukauna came in to testify what different meaning, if any, he had attached to Section 4 at the time of the signing or even to attest to any doubt about what it meant. On the other hand, the evidence that Kaukauna has been treated with respect to its basic rate schedule the same as all the other cities and that this has been true for many years is overwhelming. See, for example, 8 FPC 851 (1949), 9 FPC 457, 460 (1950); 10 FPC 170 (1951); and compare the following explanation of the company's Mr. Williams:

> That from the time I became manager of the company's southern division [before 1944, see Ex. C-45, p. 1], I was charged with the responsibility for

---

[14] Of course, notwithstanding these 1959 actions, both the Staff and the city of Kaukauna are now quite free to contend that Mobile-Sierra and company's contract estop the company from filing for increases, but the company is equally free to contend their original savings clauses are adequate and did not in truth require the revision which an abundance of caution called upon them to make.

negotiating large power agreements with retail customers and wholesale customers.

And with respect to wholesale customers, it was common knowledge and it was discussed between the various managers and myself and some members of some commissions that all of our wholesale customers were receiving service under the same rate.

That was usually one of the first questions that a new commissioner would ask. "Is this the same rate that New London is paying or Shawano is paying?" (10T1137, 1. 6-17)

In that background, correlating Kaukauna's circumstances with those of the other cities in this proceeding and reading Kaukauna's contract *in pari materia* with all the other contracts, including those developed in more recent years and perhaps for that reason more explicit, the only conclusion fairly and fully to be arrived at is that Kaukauna's contract, ambiguous though it be, was in fact intended and understood by all parties to mean the same as the corresponding provisions in the other contracts.

In the absence of other explanation as to what the savings clause means in any of the contracts, we are left with a choice between the company's natural and obvious meaning—they started with equating the two rates and put in the section as a means of keeping them the same thereafter—and a holding with the opposition that the savings clause means nothing whatever and is mere surplusage, which is hardly the judicious approach to the interpretation of a contract, either under the applicable Wisconsin common law or under any other. Restatement, Contracts 2d, § 236(a).[15] In short, the evidence is adequate that the savings clauses mean what they say, as the company contends, and there is really no evidence at all that they mean anything else.

(F) *The issue is foreclosed:* But if there is not to be used this straightforward and natural approach, relying upon the plain language found to be fully in accord with everyone's rational program and the connected circumstances, and instead there is to be substituted the hypertechnical objection that the words as drafted are not quite as perfect as lawyers would like them to be, then this entire objection based on the *Mobile* doctrine must fail entirely because of an equally hypertechnical counter-objection, which is this: At least the Kaukauna and Clintonville contracts contain this proviso: "This agreement shall not become effective until it shall have been approved by the requisite governmental authorities." Note that this is found in the very document which the Staff and city interveners rely upon to show that the company is supposed to have abrogated its right to file rate increases under the Federal Power Act. A question was raised at the hearing as to how that condition of the contract—that is, the approval by the governmental authority—is to be met, the company witness supplying the view that the authority referred to is "whatever regulatory or governmental authority has jurisdiction over the contracts" (10T1163). The cities' July brief at page 6 says this means that the contracts would become effective when they had been accepted for filing by the proper commission and that, "All six contracts, of course, have been accepted for filing by the FPC in accordance with the filing requirements of 18 CFR, Section 35.3." The trouble is that action is *not* approval, which is what the contracts call for. The Staff and the cities (who perforce must prove this "approval") did not deign to furnish the record any evidence of this acceptance for filing; but the forum is not unaware that the FPC's standard letter of acceptance for filing contains the following routine disclaimer of any approval:

---

[15] For the full exposition of the FPC's function in contract matters, and the approach which is indicated, see the opinion of Judge Brown for the Fifth Circuit in *Texas Eastern Transmission Corp. v. F.P.C.* (1962), 306 F. 2d 345, 347.

> This acceptance for filing does not constitute approval of any rate, charge, classification, or any rule, regulation or practice affecting such rate or service contained in the above-designated rate schedules; nor shall such acceptance be deemed as recognition of any claimed contractual right or obligation associated therewith.[16]

Hence, if that sort of acceptance for filing is what the cities rely on as constituting the approval by governmental authority which the contract requires, it would have to be held that no approval has been demonstrated and the contract as such did not and does not come into effect.[17] As stated, however, the proper approach is the full and understanding reading of the contractual arrangement with a sense of its real and useful application in the actual conduct of affairs between the parties, and to carry out their true and honest purpose. But if, as the Staff and the cities seem to insist, the interpretation rather is to be the verbalistic and technical reading of the bare words, without understanding or effort to arrive at their meaning, then that technical approach must be regarded as defeated entirely by the equally technical objection just cited.[18]

The Staff, in its October brief at page 3, refers to the Sierra case as demonstrating somehow that Wisconsin Michigan's contracts are a fixed rate tariff, which ignores entirely their savings clause and writes them out of the contracts. The Staff concludes:

> There, PG&E's contract allowing changes as directed by the California Commission constituted in truth, little more than an agreement to abide by utility regulatory law. The same could be said of Wisconsin Michigan's contracts.

This is just what the company is saying also, and there results only a confirmation that the true understanding is as above held—namely, that the result of the clause is freely to permit the company to file these rate increases with the FPC and to collect them subject to the company's burden to establish the truth and reasonableness of such charges under "utility regulatory law," namely the Federal Power Act.

Finally, as a postscript, if any actual and different meaning of the several savings clauses were expected to be inferred from the countering evidence or briefs, this would be hard to square with the following: first, the testimony on behalf of the cities that they knew their new rates are the same as the rate applicable to the large retail users (7T688); second, the letter above quoted from the Mayor of Kaukauna; and third, the evidence that they took occasion to enter an appearance before the State Commission in connection with the

---

[16] Cf. Exs. C-24 and C-26.

[17] The Commission Secretary's disclaimer clause has been held to prevent an acceptance for filing from amounting to an order of approval. *Pan American Petroleum Corp.* v. *Kansas-Nebraska Natural Gas Co., Inc.* (CA 8, 1958), 297 F. 2d 561, 567.

[18] Something of the same reaction is called for by the opposition's several references to the Sierra case, which applied the Mobile doctrine to rate filings under the Federal Power Act—the city makes the objection (Sept. Brief, p. 4) that Sierra itself is against the company, because in Sierra's contract there was found a provision inflating the rates through action under the authority of the state commission, just as here. But the city briefs neglect to point out the entire and 100 percent difference: In Sierra the state commission did not approve the rate change (13 FPC 200, 205), for what reason is quite irrelevant; here the state commissions have acted to give approval to the local rates.

State Commission's review of the retail rate increase.[19] Their active interest in the proceeding which established the company's retail rate increase can hardly be explained except upon the implicit comprehension that the approval of higher rates for the retail customers would result in higher rates to the wholesale municipalities, as a result of the savings clause of their contracts (subject of course to the FPC action in the present proceeding).

With the Mobile-Sierra-Memphis contract issue disposed of for the city interveners, it remains only to record that no such issue arises as to the three city wholesale customers whose rates are also being raised, but who did not appear in the proceeding, because the contracts in those three cases were canceled, revised or expired before the new rate filing by the Company took place.[20]

V. Discrimination With Rate Charged to R.E.A. Electric Cooperatives

(A) *What the issue is*: In the Commission's order of March 29, 1962, which called the hearing in this proceeding, there is recited the protest of the six Wisconsin cities to the effect that the new rates "would be unduly discriminatory because Wisconsin Michigan does not propose increases in its electric rates and charges to rural electric cooperatives which it serves at wholesale for resale, . . ." referring evidently to Section 205(b) of the Federal Power Act, which forbids any undue preference or advantage, or any unreasonable difference in rates, charges, etc., either as between localities or as between classes of service.

The point is, in brief, that the company also serves three cooperatives at wholesale, and one of them (at Oconto Falls) has from the beginning been served at the same rate as that charged to the Wisconsin cities, but the new rate filings for the city customers did not include a corresponding filing to make the same increase for any of the cooperatives. The company has now announced that it plans to make such a filing but only after this case is concluded. Such new filing, if and when made, may eliminate the discrimination issue from and after the date it becomes effective, but inasmuch as the nine city customers have actually been paying the increased rates since they went into effect on August 30, 1962, and the cooperatives have not been paying the increase at any time, the discrimination question stated in the Commission's order remains for determination, applicable to the more or less limited period from August 30, 1962, until the effective date of such new filing, if any such filing occurs. There are stated below the background as to the equality of the old rates, the variance with the new rates, and the comparability of the service with respect to at least one of the cooperatives. First, however, since the issue is almost entirely ignored in the nine briefs filed in this case, and none of them suggests any resolution of it, there are first reviewed how this issue arose and the rather amazing vacillations in the reaction of all three parties to it.

---

[19] Exhibit C-17 is the Wisconsin Commission's findings of fact and order on the power company's increase to its retail customers. The only appearances listed (apart from the power company and one customer corporation) were the manager of the utility for the City of New London, the Mayor and manager for the City of Kaukauna, a member of the Clintonville Water and Electric Utility, and the Superintendent of the Shawano Electric Utility.

[20] The consistent interpretation which is here made of all six contracts makes it unnecessary to consider the Staff's (July Br., p. 34) highly intricate and legalistic argument which would apply *Mobile* even to two of the six contracts which expired and/or were canceled in 1962, after the rate filing here in issue. Clintonville's contract was canceled on May 1, during the five months' suspension period. Oconto Falls' was canceled on December 6, three months after the new rates became chargeable on August 30, 1962.

(B) *How the issue arose*: The question of discrimination was first raised in August 1959 in the responses of several of the cities to this Commission's notification of the first filing of the rate increase. Clintonville's letter signed by the Mayor, the president of the electric plant and five other officials, states the issue as follows:

> III. It is further felt that all customers of a similar nature should be treated exactly the same and it is to be observed that the Oconto Electric Cooperative will not pay the same rates to the same supplier as does the City of Clintonville, Water & Electric Plant, but will enjoy lower rates.

The similar letter from the Superintendent for the City of New London reads in part:

> 4. We took note of the fact, during the Wisconsin proceedings, that the officials of the Wisconsin Michigan Power Company were intending to continue to serve the Oconto Electric Cooperative at the present existing rates. We maintain that if it is possible to do so in Oconto, it is likewise possible to do so in New London.

After the 1959 filing was rejected by the Commission because the company had not yet received the State Commission's approval for the corresponding increase in the retail rates, as required by the savings clause discussed in Part IV, the new rates were refiled in 1962, following the effective date of the state commission orders. Again, the Commission requested the comments of the various cities, in response to which the cities filed the "complaint" of February 1962, one count of which is to the effect that the proposed rates are unduly preferential and discriminatory, in violation of the Federal Power Act, "inasmuch as applicant has not proposed to increase its corresponding rates to certain electric cooperatives in Wisconsin which it serves at wholesale." The company's response to this complaint denies the allegation, saying it has but one such customer in Wisconsin, namely the Oconto Electric Cooperative, and the company has under consideration the matter of proposing new and increased rates for that customer as well as for the two in Michigan.

It is this background which was before the Commission when it issued its order of March 29, 1962, directing that this hearing be held and that this issue be included in the general inquiry as to the lawfulness of the new rate filing.

The next manifestation of this issue appeared on the opening day of the evidentiary hearing in May 1963, with the following statement by the company's counsel:

> Mr. QUALE. I think the only other question is on the matter of rates to electrical cooperative customers. I am prepared to state on the record that on December 21, 1962, Wisconsin Michigan Power Company board of directors adopted the following resolution:
>
> Resolved that the officers are hereby authorized and directed to commence an appropriate proceeding before the Federal Power Commission and such other regulatory bodies as may have jurisdiction for the purpose of establishing new and reasonable rates for the company's electric cooperative customers, but the actual commencement of such proceedings be deferred until the Federal Power Commission has made its determination in the rate proceeding now pending in Docket No. E-7026. (3T75, 1. 9-22)

On the following day, counsel for the company inquired whether, pursuant to some prior understanding among counsel, the foregoing statement "would satisfy the contentions of the cities." He was asked whether the proposed rate change would take place in another proceeding after the present one had determined. With that made clear, the attorney for the cities announced "I think that satisfies us," while the Staff attorney announced:

> Mr. JOURNEY. I would think that in view of the fact that the cities' complaint raised this as an issue it would be primarily of concern to them, although I think I should recognize on the record that only the Commission can dispose of issues in the sense of having fixed a hearing on this particular issue. I think that counsel's statement would be taken into account by the Commission in ultimately disposing of this proceeding. (4T215, 1. 8-15)

The attorney for the cities added further, "We do not intend to raise it further in view of this development." However, some question did arise on the following day (5T317) and there was elicited the following comment from the president of the company:

> . . . We are asked by both the Wisconsin Commission and the Michigan Commission from time to time how this matter of wholesale rates is coming along because they have granted rate increases to retail customers for rate schedules of that magnitude which are higher than those now in effect for the sale for resale customers. This is similar to the situation in which the wholesale customers are wondering what is going to be done with co-ops. We have classes of customers within the same—getting their energy and paying for it from the same company and they want to know are they treated on a par . . . (5T401, 1. 2-13)

A week later, the company's case in chief appearing to be coming to a close without further reference to this matter, the Examiner took occasion (a) to point out on the record that the issue remains in the case by virtue of the Commission's original order and the law of the land, regardless of any action or inaction by the cities in presenting or withdrawing their complaint (11 FPC 685, 690), and (b) to notify the company that a simple comparison of the new city rates with the cooperatives' would be to be drawn (using data from the official files), after which—

> If that comparison shall disclose a discrimination, that is, a difference between the rates now filed and the rates in effect for the co-op, then it seems to me there is, on the face of it, an apparent or possible discrimination. Whether that discrimination is an unlawful one is something to be decided. There is where I understand would be your burden of proof under 205-E, where it comes into play.
>
> And, frankly, what I am trying to get down to with all this long speech is simply this: If there is a difference, it would seem to be necessary to regard it as an apparent discrimination subject to be removed or overcome by any showing which the company wants to make under its burden of proof to show that it is really not a discrimination at all, or (b) if it is one it is not an undue discrimination. It seems to me that is the company's job. [See 11 FPC 685, 689.]
>
> If they do not show to us that this difference is neither a discrimination or an undue discrimination, then it seems to me there would be serious question on the other side as to how I could come out with an order to the effect that the new rate was just and reasonable. That's my feeling, my present

feeling in the matter; and I want to give that to you to think about before you conclude whatever you want to conclude.

Is there any doubt about what I mean?

Mr. QUALE. I understand you. (10T1190, 1. 1-25)

Toward the end of the hearing the company again presented their commercial manager, who testified generally that the two cooperatives in Michigan are very small, serving a particular class of customers, purchasing at smaller voltage and on an entirely different rate arrangement, all tending to suggest that the service to those two customers may not be comparable and that the difference might warrant a variance in the rates. On the other hand, as to the Oconto Electric Cooperative, their rate is to be increased in order to eliminate the discrimination.

(C) *The "position" of the parties*: In their briefs, parties' statements of position are something less than definitive:

(a) From the Cities' July brief at page 4:

> While the interveners have maintained that the failure of Wisconsin Michigan to include certain rural electric cooperative customers among those wholesale customers to whom the proposed rates would be applicable constitutes undue discrimination, they do not now press this issue in view of statements by the company (Tr. 75) that new rates for the cooperatives will be filed with the Commission which presumably will be identical to those sought for all other wholesale customers.

However the Cities' September brief refers to the company's "eleventh hour presentation attempting to justify such discrimination" and concludes, "While we do not press the issue, it cannot be assumed that we feel the Company has justified such discrimination by witness Williams' testimony."

(b) The Staff briefs unaccountably would leave the issue for later determination, *i.e.*, they give passing mention to a few of the foregoing facts (July brief, page 9), without discussing the issue or even listing it among the questions presented, but their proposed findings (as to the three utilities not affected by the *Mobile* contract issue) suggest that the company, upon filing new rates to accord with the Staff cost of service, be required to establish at that time "their non-discriminatory and non-preferential character" (September brief, p. 58), adding on the next page that when that has been done the new rates should be determined to be just, reasonable and not unduly discriminatory. Not a word appears to suggest what showing must be made to establish that the new rates are non-discriminatory, nor where, when, or by whom will the determination of that question be to be made, nor what, if any, refund action is called for to correct the admitted discrimination which began August 30, 1962 (the end of the suspension period) and is to end some time in the future, upon the filing of the new rate for the cooperatives which the Board of Directors has determined upon.

(c) The Company brief (July, pp. 20, 48) contents itself with a conclusion that the service to the two Michigan cooperatives has been shown to be substantially different and that the issue of discrimination as to the Oconto Electric Cooperative service they understand is not to be pursued by the interveners in view of the company's announcement that a new rate for the cooperative customers would be established after the close of the present proceeding.

In short, it is the understanding that the company regards the issue as present only as to the Oconto Electric and that the new filing some time in the future will take care of the question; the cities remain unconvinced but do not press the issue; while the Staff would postpone consideration of the discrimination issue until after the new filing designed to eliminate the discrimination. It is concluded that (a) the issue is here as a result of the Commission's order specifying it as one; (b) the company's announcement of a proposed new filing later on does not even purport to allay the discrimination, if any there be, during the interim period from August 30, 1962, to the date of such new filing; and (c) that under the plain language of the Federal Power Act, Section 205, there cannot at this time be issued an FPC order approving the increases for the interim period beginning August 30, 1962, unless it be first found that the increases do not create an undue preference or disadvantage, or an unreasonable difference in rates and charges either as between localities or as between classes of service.

(D) *The service to the Oconto Electric Cooperative*: According to its rate schedules the company's service to the Oconto Electric Cooperative is at 33,000 volts, mostly delivered to the Cooperative's substation located at or "appurtenant" to the Power Company's plant at Oconto Falls (where the company also makes its delivery at 2,400 volts to the City of Oconto Falls, Exhibit C-10, p. 2). The Oconto Electric Cooperative serves 3,318 customers, predominantly farm, residential and seasonal cottage customers. By 1961 its annual purchase was 15.6 million kwh and the highest monthly demand 4,080 kw. The annual bill for purchased power (under the same rate schedule as that for the several cities) came to $166,135.[21] The sales figures are from slightly to considerably smaller than the corresponding figures for Clintonville, Kaukauna, New London, Shawano, and the Upper Peninsula Power Company (Iron River). At the same time the Oconto Electric Cooperative figures are three or four times larger than the corresponding figures for Florence, Oconto Falls, Crystal Falls, Michigan, and the Wisconsin Public Service Corporation (Suring) (Ex. C-4).

It was testified that the Oconto Electric Cooperative has been a "fast growing co-op" and is "more comparable to the municipal customers, far more than either of the Michigan ones in size." (15T2018) It serves a more or less scattered area, some of it perhaps a less prosperous one. At 4,720 kwh, average annual consumption per customer is 90% of the company's own average sales to residences in the southern division or to farms in the northern division, but only 57% of the company's average sales in the southern division (Ex. C-53, pp. 2–3; 15T2020).

At the return session of the hearing there was received a total of 18 pages of generalized testimony designed particularly to show that the Upper Peninsula service to the two Michigan cooperatives is of such sub-marginal, scattered and seasonal character that the entirely different rate form said to be in effect for them is quite appropriate without the new increase being charged to the others. But the suggestions then made as to the Wisconsin co-op, namely the Oconto Electric Cooperative, amount to nothing more than an undocumented and undemonstrated gesture to the effect that conditions might also be a little different. While the smaller co-ops are on a "load factor rate," the rate for the Oconto Cooperative ever since it began in 1947 has been the identical rate as that charged to the nine wholesale customers, as shown by the table herewith, and that rate has not been increased since 1937.

---

[21] If the increased rates as now being charged to the other cities had been in effect for the Cooperative, their 1961 bill would have been $200,160, a 20% increase amounting to 85¢ per consumer per month. Ex. C-53, p. 4.

COMPARISON OF OLD AND NEW RATES FOR THE SEVEN WISCONSIN CUSTOMERS WITH THE RATES CHARGED ORIGINALLY AND STILL IN EFFECT FOR THE OCONTO ELECTRIC COOPERATIVE

	Demand block ($ per KW per month)				Energy block (cents per KWH)						
	First 50 kw	Next 150 kw	Next 100 kw	All over 300 kw	First 10M kwh	Next 10M kwh	Next 10M kwh	Next 10M kwh	Next 20M kwh	Next 140M kwh	All over 200M
Previous contract rates to the 7 wholesale distributor customers in Wisconsin* (Exs. C-10, C-11, C-12, C-13, C-14, C-15, C-15-A, C-25)	2.25	2.00	1.50	1.25	1.25	1.15	1.05	0.95	0.85	0.75	0.65
Previous *and Present* Rates to Oconto Electric Cooperative (Wis. Mich. FPC Sched. 32, filed Nov. 26, 1947 (Less 7% for primary voltage, as in Rate VII-B for retail customers)	2.25	2.00	1.50	1.25	1.25	1.15	1.05	.95	.85	.75	.65
	First 200 kw	Next 800 kw	Next 1M kw	Next 2M kw	All over 4M	First 25M	Next 75M	Next 100M	Next 800M	Next 2MM	All over 3MM
New Rates** filed for the 9 distributors (but not for Oconto Electric Cooperative) as charged since Aug. 1962, subject to refund	2.15	1.80	1.55	1.35	1.25	1.50	1.30	1.10	0.90	0.85	0.80

*First line also agrees with Wisconsin Rate VII filed with PSC of Wisconsin in 1938, for company's large retail users (Ex. C-16); and is subject to the high voltage discount (VII-B).

**New rates agree with new Wisconsin rate for "primary" (over 4,000 volts) service at retail, as approved by Wisconsin PSC on May 26, 1961 (Ex. C-17, p. xv). Also, they agree with the new rates for large users in Michigan approved by the Michigan PSC on March 3, 1960 (Ex. C-21).

Notwithstanding the company had already announced that it expects to file a new rate for the Oconto Cooperative (in response to the claim of discrimination) the conclusion was stated that the new rates as here filed would be appropriate for that cooperative "if no consideration is given to the fact that such customer is a cooperative, and the further fact that it serves widely scattered customers over a relatively large service area, substantial portions of which are submarginal from an economic standpoint." (C-53, p. 4) But the company itself serves similar and adjacent areas with a similar type of retail load, so does the Wisconsin Public Service Corporation, the difference being that the proportion of such territory to their total is very small. It was repeated that the Oconto Falls Cooperative has been fast growing and thus "it is more comparable to the municipal customers." Some comment had been heard that some sections of its area are not self-supporting and that some classes of customers present a credit problem. However, the company's manager, Mr. Williams, think "all three of the cooperatives we serve are meeting their interest payments and are meeting their principal payments. I wouldn't undertake to give the impression that any one of the three are on relief, nor are they flush, financially." (15T2018)

After he had related the story of the negotiations and interviews with the various commissions which preceded the fixing of the contract rate for the two small Michigan cooperatives, the witness was asked how the rate arrangements for the Oconto Electric Cooperative came to be fixed, to which he explained:

> By negotiation with the officers of the Oconto Electric Cooperative. They outgrew their substantial facilities and they could anticipate they were

going to do some months in advance, and they asked for service to a larger substation. They asked to purchase at primary voltage and we submitted our large users rate 7-A for their consideration.

> It was explained that that rate was in use by the municipalities which we serve, and there was mutual agreement that they would thereafter take service under that rate . . . (15T2024, 1. 3–12)

No other evidence was submitted to establish any difference in the service or any basis for a difference in the rates.

These tentative, hesitant, unproven and undemonstrated suggestions that there might be some differences between the service to the Oconto Electric Cooperative and that to the neighboring cities are entirely belied by the manifestations of similarity, at least of comparability. In the first place, the Oconto Cooperative has always been treated along with the municipal group from the time of its inception in 1947, when the Cooperative "signed up" for the municipal rate, which it has paid ever since. See 8 FPC 851, where the Commission set for hearing a proposed revision of the fuel adjustment clause as applicable to the Wisconsin Michigan rates for the municipal customers in this proceeding, including the Oconto Electric Cooperative. See 9 FPC 457 and 10 FPC 170 (1951), the case which, as affirmed by the 7th Circuit, determined that the company's wholesales are jurisdictional under the Federal Power Act, referring to its service to the cities of Kaukauna, Shawano, New London, Clintonville, the Oconto Electric Cooperative, and three others. Not a word appears to suggest any differentiation between the Oconto Cooperative's service and that rendered to the other wholesale customers.

In the second place, the policy which accords to the Oconto Cooperative the same rates as the other wholesale customers' coincides with the policies intended to produce the same rates for the ultimate consumers throughout the area, that is, the consumers buying directly from the power company, those buying from the City of Oconto Falls or the other municipal distributors, and those buying from the cooperative. As explained by the company witness—

> At one time, we all mutually sought the same rate for the same class of service and we had almost achieved it because of the fact that we might be serving one side of the road and the co-op the other side of the road, and it would save ourselves embarrassment to have the same rates for the same class of service.
>
> With our increase in 1960 and 1961 in Wisconsin, and in 1960 in Michigan, I expect our retail rates are somewhat higher. I am not certain of it. (15T, p. 2025, 1. 22–25 and p. 2026, 1. 1–5)

In other words, whether and to what extent, the cooperative may have more or less suburban, farm, or seasonal cottage customers, and whether or not the resulting "low density" warrants a difference in rates, the indication is equally true that the company's own retail service area in the vicinity and some of the areas served by the municipal customers have the same characteristics.

In the third place, and most significantly, the company has itself already determined that the present, current situation as of today amounts to a discrimination and has proposed to eliminate it by filing new rates as soon as this case is done. At the hearing, referring to the testimony that the board of directors of the company has authorized an appropriate rate to be entered for the R.E.A. customers "at the termination of this case," there occurred the following:

> Presiding Examiner. Is that in order to eliminate the discrimination, Mr. Quale?

Mr. Quale. Yes.

Presiding Examiner. Why is it being eliminated?

Mr. Quale. The question was raised in this proceeding on discrimination, I think it was directed at the Oconto Co-op in the protest of the Cities.

Presiding Examiner. So you eliminate it because Section 205 says so[?]

Mr. Quale. We propose to eliminate it because we think it is a fair and appropriate thing to do. (15T2022, 1. 7-17)

(E) *The law against discrimination*: The governing statute, Section 205 of the Federal Power Act, is quite as plain as it is all-encompassing:

> Sec. 205. (b) No public utility shall, with respect to any transmission or sale subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

The statute is unyielding and the Commission's approach has been equally forthright. Thus, its policy has been as laid down in 1938 (Gulf States Utilities Company, 1 FPC 522, 524):

> Proper practice and the avoidance of undue discrimination requires, except in unusual cases, that once a new rate is adopted by a company it be made available and applied uniformly to all customers of the same class at the same time.

In a recent natural gas case under a similar law, the Federal Power Commission denied a filing of a special and discounted rate for a particular customer notwithstanding (a) the plea of hardship, (b) the acquiescence of all the other customers, (c) the claim that an old and settled relationship should be continued, and, finally, (d) the point that the discrimination would be for a temporary period of months only—all as in this case. *Transcontinental*, 28 FPC 979. See also 2 FPC 134, 140; 11 FPC 685; 22 FPC 900, 903; and 13 FPC 301.

There is no doubt applicable the principle of the Interstate Commerce Act and the common law generally to the effect that not all discriminations or preferences fall within the ban; only such as are unjust and unreasonable (*Interstate Commerce Commission* v. *B. & O. R.R.*, 145 U.S. 263, 276; *Great Western Ry. Co.* v. *Sutton* (1869) L.R., 4 H.L. 226, 237, per Blackburn, J.). But it is clear that discrimination between two nearby areas or discrimination among similar enterprises in the same general area is peculiarly the subject of the statutory rule. *Ayrshire Collieries Corporation* v. *United States* (1949), 335 U.S. 573. As it was put in the initial decision of October 3, 1963, in *Carolina Pipeline* v. *Southern Natural*, RP63-4, 31 FPC 705 at 721.

> . . . Illusory, inconsequential differences without distinctions will not support a difference in rate schedules and cogent reasons for such differences in treatment of customers must be shown. *Cf. Panhandle Eastern Pipe Line Co., et al.*, 10 FPC 328, 331.

Numerous decisions have validated a rate difference for R.E.A. cooperatives when the service has been demonstrated to be of quite different character in a number of ways[22] but, as held by the Indiana Public Service Commission (in a case where the power company likewise filed increases for some distributors but not for the cooperatives), a ruling either establishing or disestablishing a difference on that score cannot be made without full evidence (21 PUR 3d 309).

---

[22] *Carpenter* v. *P.U.C.* (Penn., 1940), 15 At. 2d 473; *State* v. *Municipal Corporations* (N.C. 1955), 90 S.E. 2d 519. Last March, in an order accepting a rate *reduction* for service to R.E.A. cooperatives by several Eastern Shore power companies, the Commission announced it is conducting an investigation of the power companies' rates for all forms of wholesale service, anticipating Commission action on any of the rate schedules, if found warranted. *Re Delaware P. & L. Co., et al.*, March 15, 1963.

(F) *The result as to discrimination*: The result of the discrimination issue could hardly be more clear, or more dispositive. The evidence suggesting a difference in service to sanction the discrimination is not more than a scintilla, certainly not the substantial evidence the law requires for any such finding. Rather, there is an outright negation of any such difference in the company's own conclusion that (a) the cities and the Oconto Cooperative have always been treated the same, (b) they should be treated the same, and (c) as soon as this case is over, they will be treated the same.

In that posture, the fact of unjustified discrimination for the period beginning August 30, 1962, is plainly established, indeed all but admitted. The discrimination is patent, open, notorious, blatant and unvarnished, inevitably so as a result of the company's ambivalence—discrimination next year, then it is equally unfair and inappropriate to maintain the discrimination this year, and it was quite as unfair and inappropriate to begin the discrimination last year, on August 30.

For that reason—and that only—it is concluded the increased rate filings which are the subject of this case cannot be found to be lawful or effective. From the effective date hereof until some new and non-discriminatory rate filing becomes effective, billings should be, and are directed to be, made at the former rates. For the interim period, since August 30, 1962, the collections which have been made of any amounts in excess of those chargeable at the former rates should be, and are directed to be,[23] refunded to the respective payers. However, since the delay in this case is not found to be attributable to the company, no interest thereon is required to be paid.

VI. Unitization of Costs of Service

(A). *How to verify the cost of power purchased from the parent company?*: Before entering upon the study of the cost of service—which, of course, will become relevant as soon as the new, non-discriminatory filings are made in accordance with the company's announced program—it is necessary to conclude what costs of what service are to be counted. The point is this: Out of a total cost of service approaching $19,000,000 for the 1961 test year,[24] between a third and a half of that amount consists of a single item for the contract cost of purchased power, $7½ million, nearly all of which is bought from the company's parent, the Wisconsin Electric Power Company. It is the method of auditing and justifying that expenditure that is very much in issue.

Pointing to the numerous evidences of common ownership of the two enterprises, common control and joint operation, the city interveners posit a single, basic costing unit made up of the integrated power pool system of the two companies which serves the nine wholesale customers, using an appropriate portion of the joint costs, after classifying them between "demand" and "energy", and allocating the separate components on the basis of peak and annual usage. This method, of course, disregards and "washes out" the sale transaction between the two companies; quite possibly it is the method that would be employed if there were no Wisconsin Michigan Power Company and this were solely a rate case of the Wisconsin Electric Power Company.

The company, while insisting upon the preservation of the separate corporate identities, and not failing to mention that the sale to the company by its parent is under a "filed rate" which has been determined and approved by the state commission and has been accepted for filing by the Federal Power Commission, nevertheless accepts fully that appropriate inquiry into the validity of that charge is in order. The company has indeed furnished a detailed cost study on the parent company's sale to its subsidiary, Ex. C–30, which concludes on Schedule 13 that the parent company during the accepted test year of 1961 earned a net return of only 4.43 percent on that portion of the company's depreciated capital property allocated to the power service furnished to the Wisconsin Michigan Power Company.[25] But the company stoutly opposes the cities' much broader program, which, after integrating the entire system's costs for the two companies, then applies about 2 percent as the share of the total business attributable to these nine city distributors. The company assails this approach as illegal, illogical, unnecessary and incorrect (perhaps especially so since the result (Ex. I–1B, Sch. 3, p. 1) is to show that even under the prior rates, before the increase, the revenues from the nine cities were $95,000 (or about 7 percent) in excess of the cost of service as developed under that system).

---

[23] Under authority of Section 205(e) of the Federal Power Act, 16 U.S.C. 824d.

[24] The various figures herein are rounded off for clarity. For this item see Ex. S-1, Sch. 2.

(B) *Staff study shows 4.38% return on the sale*: The FPC Staff restates the admitted premise that the cost of purchased power from the parent company must be clearly examined into, but the Staff objects to the city interveners' "rolling together" of the costs of both companies. Their difference with the cities is upon the selection of technique rather than objective. The Staff's Exhibit S–17 is a cost of service study on the operations of the Wisconsin Electric Power Company related solely to its one sale to its subordinate, the Wisconsin Michigan Power Company. The result is to show that the parent company earns a return of only 4.38 percent on its sale to its subordinate firm, the same purchase which represents nearly half of Wisconsin Michigan's cost of doing business as explained above. It is shown that, in order for Wisconsin Electric to earn a normal rate of 6 percent on this sale, it would have to raise its price to Wisconsin Michigan from $7¼ million to $8 million, based on the 1961 figures (S–17, Sch. 2, l. 25, col. 4 and 7).

This study is quite elaborate, consisting of 15 schedules, and purports to consider Wisconsin Electric Company's entire cost of doing business, from which there is selected out and counted the portion that operates its primary transmission system (138 kv and higher), since the service to Wisconsin Michigan is at that voltage. Wisconsin Electric's various lower voltage transmission systems, such as the 26.4 kv facilities, are not included because they are not used to serve Wisconsin Michigan. Otherwise, there is an allocation of the facilities of Wisconsin Electric which are used for this sale and then an application of the demand and energy ratios as shown in Ex. C-30, Sch. 2. The net result of the exhibit is to demonstrate quite clearly that the sale to Wisconsin Michigan does not produce an excessive return to the parent company, actually only 4.38 percent, and upon that basis, the exhibit was admitted and was not challenged in cross-examination (12T1673). The rate of return shown, 4.38 percent, compares closely with the company's own figure of 4.43 percent as shown on Exhibit C–30.

---

[25] To arrive at that figure, the exhibit computes that the demand responsibility for this sale comes to 11.25 percent of the maximum system demands upon the Wisconsin Electric facilities, and accordingly allocates to this service that percentage of its depreciated production and transmission property, or a total net property assignment of $20,000,000 out of about $188 million. The net return, $965,316 (which produces the claimed rate of 4.43 percent on the allocated rate base), results from charging about 12 percent of the production expenses of the Wisconsin Electric Power Company to this sale, which is the ratio of the delivery to Wisconsin Michigan to the total power supply available for sale.

(C) *Verification is essential in view of common ownership*: The fact that all of the common stock of Wisconsin Michigan is held and owned by Wisconsin Electric Power Company is enough, without more, to require that the transaction between them for the sale of power be scrutinized with care, that it be examined to determine whether the cost is a fair and reasonable one from the standpoint of Wisconsin Michigan. "Such an inquiry is essential to the fixing of just and reasonable pipelines rates. *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619 (DC Cir., 1957) cert. den. (355 U.S. 904)." [20]

In that view, it is unnecessary to discuss the degree to which the operations of the two companies are in fact integrated and under common control. It is enough to record that four out of the seven directors of Wisconsin Michigan are among the nine directors of Wisconsin Electric and that the two companies do have common officers at the principal posts. To some extent they operate separately, that is, the dispatcher for Wisconsin Michigan, located at Appleton, determines the hourly needs of all the customers on its system and the hydrogeneration available at the dams in the north, from which there is derived the amount of steam power required from the parent company. It is that information that is communicated to the dispatcher for Wisconsin Electric 100 miles away, perhaps on an hourly basis, who incorporates it into the pattern of the needs of all the Wisconsin Electric customers and arranges for steam generation accordingly. While it is denied that the two companies operate their systems jointly to fit the needs of their combined load curve, it was shown that the hydrogeneration is used mostly for "peaking" of the Wisconsin Michigan load, and that since the two load curves are virtually the same, the practical result is to operate for the benefit of the common load. While it was denied that the two companies function as one, it was agreed that the practical operations are as they would be if there were no subsidiary company and the northern operations were conducted by a separate division of the overall enterprise. Anyway, all this would seem to be irrelevant as soon as it is agreed that the "filed rate doctrine" (for Wisconsin Electric's sale to Wisconsin Michigan at Forest Junction, near Appleton) does not foreclose inquiry into the reasonableness of the rate of that sale. Thus the degree of interrelation is not so important; what is needed is the correct method of checking the validity of the annual price, $7.2 million, paid by the subsidiary to its parent for its supply of power.

(D) *The unitized cost study is less accurate than Staff's method*: The method advocated by the city interveners could perhaps be used if no better were available, but it has the obvious defect that it depends upon too many judgment factors and other variables to be accurate when it is considered that the sales to the nine cities comprise only 2 percent of the combined system's total power generation. By applying the "Atlantic Seaboard" formula, the cities' exhibits charge half the fixed costs to the energy component, then charge to the cities 2.12 percent of the remaining fixed charges (as the demand component) and 1.92 percent of the resulting energy charges, for a total cost of service of $1,339,050. This turns out to be $220,000 below the actual revenues under the former rates, let alone the greater difference after the increase. The Staff undertook a similar study of the joint or unitized costs, Exhibit S–3, and this produces an allowable price to the cities actually somewhat in excess of that claimed by the company under the new rates. This results from supposing a rate of return of 6 percent, instead of the 4.38 percent that Wisconsin Electric is said to earn on its sale to its subsidiary. The greater part of the difference between the Staff study and that of the cities comes from the allowance for the return (the cities use 5.55 percent) and for income taxes. The latter alone accounts for a difference of $140,220, which results from the income tax allowance only at the accelerated depreciation rate, which the company does not use, as explained below.

---

[20] Quoting from *Northern Natural*, Opinion No. 385, April 2, 1963, 29 FPC 689.

Two points of difference are enough to illustrate why the one approach should be used and the other should not be. The cities' cost study for service to the nine cities from the combined system includes the entire primary transmission facility of Wisconsin Electric, 138 kv and higher, but does not use its secondary transmission system which serves the Wisconsin Electric areas in the southern part of the state at 26.4 kv. Their point is that neither the Staff nor the company used the latter facilities as part of the rate base in their testing of the Wisconsin Electric cost of service for its one sale to Wisconsin Michigan, and since that demonstrates that the 26.4 system is not considered "used or useful" in serving Wisconsin Michigan or its customers, there is no need to include it in the cost study so prepared. The Staff rejoinder is that the only proper approach to a joint study of the costs of the entire system is one which combines the entire generation and transmission facilities used for all of the wholesale customers of *both* companies, and since Wisconsin Electric has a number of wholesale customers served under the 26.4 system, then that installation must be counted in so that all wholesale customers of both will be treated and figured alike. The cities' surrejoinder is that power does not swim upstream, so to speak, from the 26.4 system of Wisconsin Electric into its primary transmission facilities, and therefore none can reach Wisconsin Michigan from the 26.4 lines; anyway there are no power generation facilities directly serving the 26.4 system. This, the Staff says, is beside the point.

The answer would seem to be that either aspect might be more appropriate, depending upon the true objective, but the disparity in view-points demonstrates the difficulty of using the combined costing method at all. When these diverse applications of the joint costing process result in a major and bona fide difference of opinion as to the scope of the transmission plant to be included as the starting point, the inevitable reaction is to doubt the validity of the entire joint costing method for present purposes.

As another example, the cities apply the "Atlantic Seaboard" formula for classifying half of the fixed costs to the energy use because that has been used by the Commission in a number of gas pipeline cases. The Staff points out that formula is peculiarly applicable to lines which have a large volume of interruptible sales, but here neither company has any sales of that character; the Staff prefers a more refined system which works out to charge about 20 or 25 percent of the fixed costs into the energy component—but all of this appears to be a judgment factor, undemonstrable and indefinable, designed to charge the high demand customer somewhat more for periods of sustained demand.

Numerous judgment factors affect many other elements of both studies also (such as the method of measurement of the customer demand to compute the demand responsibility percentage as explained below), and they tend to explain the wide variance in the results obtained in the two exhibits which apply the joint costing method. But at the same time they serve to demonstrate the inutility of that method here, since the sales in question amount to such a small amount, only 2 percent, of the total operations in question. Allocations tend to lose reality and credibility when reduced to such fine amounts. An error of only one tenth of one percent in the demand ratio works a $40,000 change in the annual cost of serving the nine wholesale customers. (Ex. S-3, Sch. 1). Accordingly, the Staff method (Exhibit C-17), showing a 4.38 percent return to the parent on the sale to the subsidiary, is believed to be preferable and is accepted as adequate test of the validity of the sale price between the two companies.

(E) *The operation of the contract between the companies is controlled*: Nevertheless, while rejecting, for the reasons stated, the cities' "rolled together" study on the cost of service of the combined operations of the two companies, it is still possible, for the purposes of review of the operating costs of Wisconsin Michigan Power Company alone applied to these wholesale customers, to consider the various adjustments and correctives which are advocated by the city interveners and which underlie their exhibit. There is one exception—the cities propose a downward adjustment of 1.5 percent in the expense for coal purchased by Wisconsin Electric at its thermal plants, which is suggested on the basis of studies of the recent coal contracts which are believed to indicate that the cost of coal is going down since the 1961 test year. But the evidence of the trend of prices over a number of years, that is since 1940, does not confirm the prediction, based upon these few and very recent coal purchases, that the over-all cost of coal over the long range can be counted on to be lower than the 1961 costs used. Anyway, the difference—evidently some $6,000 per year[27]—would seem to affect the resulting rate of return of Wisconsin Electric, in its sale to Wisconsin Michigan, by much *less* than one-tenth of one percent and thus, even if the predicted reduction in coal costs should be experienced in fact, this would hardly affect the validity and reasonableness of the price at which Wisconsin Michigan buys its supply of purchased power.

One final point on the cost of purchased power. The cities (September brief, p. 16) perceive some fatal result from relying upon the purchase arrangement between the two affiliated companies and the Staff verification thereof just referred to. Their problem is that Wisconsin Electric supplies energy at several different rates according to operating conditions, selling firm power at .65 cents per kilowatt hour (plus a demand charge) and economy power (misnamed "dump") at .5 cents per kilowatt hour. The selection of the applicable rate appears to depend upon whether total demands upon Wisconsin Electric's system at the moment are such that only its newest and most efficient plants are required for the time being to meet them, in which case their costs are low and their price is low, or whether the total demands at the moment are so high as to require the company to put on the line its older and more expensive equipment. It is manifest that with this complication only the dispatcher in the Milwaukee area and the Wisconsin Electric operating personnel are in a position to determine which of their operating units must be pressed into service, which of them are actually in use, and, accordingly, which rate is applicable for the kilowatts then being produced. The arrangement thus seems to the cities to be one-sided and is claimed to be subject to fell or sinister manipulation by Wisconsin Electric at the expense of its subsidiary customer, Wisconsin Michigan.

It is worth reminding that there appear to be many situations in the utility business where the particular service available (and therefore the rate applicable) at the moment can be determined only by examination of the facts and data available at the utility headquarters, hardly subject to convenient verification by the customer. It is notable here that, with all the checking and verifying by the Staff and the interveners at the offices of both companies, no serious question of manipulation was actually demonstrated. In any event, the arrangement has been reduced to a formal operating memorandum (6T646), it is subject to the supervision of the state commission (6T640), and in practical operation the Wisconsin Michigan personnel have in fact been in a position to raise questions about correctives when called for (15T1935). Anyway, if the cities' basic premise be correct that the two companies are in reality one, and all of the personnel of both of them are engaged in a single joint enterprise, then there would seem to be no motivation for any improper maneuvering of the classification of the power sold to the subsidiary, nor any basis for the apprehension about it.

---

[27] $6,395; that is, 1.5 percent x 1.9269 percent x $22,125,843, which comes to less than one-third of one-tenth of one percent of the assignable Wisconsin Electric Rate base.

It is concluded accordingly that the cost studies on Wisconsin Electric in connection with its sale to Wisconsin Michigan are adequate verification of the disbursement by Wisconsin Michigan for the cost of purchased power, that is, for the nearly $7¼ million out of nearly $19 million for its over-all cost of service (Ex. S-1, sched. 2).

VII. Cost of Service—Wisconsin Michigan

(A) *Legal basis*: The legal basis for the Commission's inquiry into the costs incurred by Wisconsin Michigan, as a basis for judging the validity of its proposed rates, is fully reviewed in the Staff's opening brief, as follows:

> *Statutory objectives*—Part II of the Federal Power Act obligates all interstate electric utilities to provide adequate service to the public, at a fair monetary return to the utilities and with due recognition of "* * * the congressional objective of efficient use of the nation's power resources * * *." *Pennsylvania Water & Power Co.* v. *F.P.C.*, 193 F. 2d 230, 234 (CADC), affirmed 343 U.S. 414. The Act recognizes the duty of utility investors and managements to invest, manage and operate their properties in a prudent manner so as to achieve a "* * * fair rate of return, on a fairly established rate base * * *" after allowances for operating expenses, depreciation and taxes. *South Carolina Generating Company*, 16 FPC 58; *Pennsylvania Water & Power Co.* v. *F.P.C.*, *supra* pp. 242-243.[24] If interstate utilities fail those tasks, this Commission's responsibilities under the Power Act require that it prescribe the just, reasonable, and non-discriminatory and non-preferential "* * * rate, charge, classification, rule regulation, practice * * *" and "* * * fix the same by order."[25]
>
> *Standards*—The statutory criteria (just, reasonable and not unduly discriminatory or preferential) spring from the interstate commerce power and free this Commission from any conflicting state or local laws. *State Corp. Comm. of Kansas* v. *F.P.C.*, 206 F. 2d 690, 705 (CA8), certiorari denied, 346 U.S. 922.[26] They are applied subject to a single limitation—that Commission orders be "* * * necessary or appropriate to carry out the provisions of this Act.* * *" (Section 309).
>
> In judging what principles and procedures are necessary or appropriate for ratemaking purposes under the Power Act the controlling factor is the end result of Commission action. Particular ratemaking formulas,

---

[24] Regulated and non-regulated businesses alike share the risk of actually earning a net operating profit. *Hope Natural Gas Co.* v. *F.P.C.*, 196 F. 2d 803 (CA 4).

[25] Section 206(a) of the Act prescribes this Commission's authority over established interstate wholesale rates and services. Section 205(e), in prescribing the Commission's authority over proposed rates and services, specifies that "* * * the Commission may make such orders with reference thereto as would be proper in a proceeding initiated after it [rate of service] had become effective. * * *"

[26] Construing similar provisions of the Natural Gas Act, Sections 4 and 5, which were modeled on Sections 205 and 206 of the Power Act and are identical thereto in all respects here relevant.

methods, theories (or even infirmities of method) are unimportant if the end result may be said to be just and reasonable. *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591. The Commission "may formulate its own standards" if the end result of its rate regulation is a product of reason, supported by substantial evidence and protective of the respective interests of consumers and investors. *Pennsylvania Water & Power Co., supra*, p. 242. Commission discretion is circumscribed only by the doctrine of abuse of discretion.[27]

(B) *Net cost developed*: The remarkable result of the plethora of studies and exhibits by all three parties is that, excepting for the two major differences in the "joint costing" approach considered above and the income tax question which is considered below, they come out to practically the same result. The Staff concludes that the company's cost of serving the nine wholesale customers for the year 1961 (allowing return at six percent) came to $1,784,050, which is more than 98 percent of the actual revenues to be expected under the new rates, $1,815,760, while the company's cost of service with a return at 6 percent, works out at $1,848,460.[28]

(C) *Reconciliation of costs*: The Staff's September brief has furnished a reconciliation of their cost of service with the company's, showing three items of difference, as follows:

(1) $15,192 from a slight variance in the percentages of demand and energy to which the total production costs of nearly $8 million are classified. But this is largely a judgment factor and neither one can be *proved* to be exact or correct.

(2) $23,747 from the disallowance of certain substations and transmission property under the Staff's view that a few such facilities serve only the company's retail outlets. These are step-down installations from the 69 and 34.5 kv lines and do seem, according to the testimony, to be related more directly to distribution. However, two small items (Twin Falls and Oconto Falls) the Staff concedes were unnecessarily so classified, which would restore $1,270.

(3) $25,000 for the annual costs related to the Appleton Steam Plant, which is mostly a "cold standby" steam generation facility kept available for use in emergency. Of this, $11,321 is obviously correct as the cost of certain local and retail functions, but for the rest the adjustment raises a question quite out of proportion to its importance. Since the plant's only power use for some years has been occasioned by an "outage" in Wisconsin Electric's generating plants down state, the Staff views the Appleton plant as chargeable to the parent company's power pool, *i.e.*, not "used and useful" for Wisconsin Michigan at all (or at least not solely). But this both is extraordinary, and proves too much.

No reason appears why any customer company (such as Wisconsin Michigan) should not maintain at nominal or minimal cost a standby generator against the possibility that its supply source may fail, a measure of insurance so to speak. That it has not been needed locally does not show it may never be.

Further, the Staff's thought seems to be that Wisconsin Electric (the supplier) should make some sort of a rebate of the amount ($13,679 per year), apparently to recognize that should there transpire a power source emergency on Wisconsin Electric, then *this* customer's demand (after a few hours' start up time) could be made that much less. Even if this logically follows, all it really suggests is that Wisconsin Electric's sale price should be reduced a little to allow for this indirect benefit to it. But that has already occurred. Wisconsin Electric now sells at a discount, earning, according to the Staff, only 4.38 percent return on this sale. The Staff cannot expect Wisconsin Michigan to have it both ways, that is, both the indicated rebate and the favorable electric rate too. For all that appears, the low return to Wisconsin Electric was settled upon partly in view that its customer company maintains this small standby for their joint benefit. Disallowing it as a charge to Wisconsin Michigan's customer service means only that Wisconsin Electric is expected to pay it, perhaps twice.

---

[27] *Pennsylvania* case *supra*, p. 242 where the Court states: It * * * remains for us * * * to examine the theory upon which the Commission purported to act and to assure that its action was within the realm of allowable discretion * * *.

[28] See, respectively, Staff's July brief, p. 21; Ex. C-3A, Sch. 24 and *id.*, Sch. 24A. For the Staff a total of seven different figures were given at various stages, ranging from $1,769,550 to $1,785,172, which reflects the various refinements achieved as the case progressed. See also the September brief at pp. 3, 56 and App. A, p. 1; Ex. S-1, Sch. 1; 11T1461, 15T1958.

These three differences would cover the $64,000 between the Staff cost of service and the company's (Ex. C-3A). But actually there is no such difference to explain. The company's "cost of service" is moot or academic insofar as its total is more than the total sum the actual rates here under review are expected to exact in dollars from the nine wholesale customers, and that latter figure is unchallenged. The total, that is, the expected receipts under the new rates for the test year volumes, is $1,815,760 (Ex. C-3A, Sch. 22) which is only $31,858 above the Staff cost of service, and already well within the zone of reasonableness. But "adding back" to the Staff cost the steam plant item of $13,679 and the other one for $1,270 (Pars. (2) and (3) above) there is left only the small and inconsiderable difference of $16,909, or less than one percent. And that lingering difference only equals the margin (referring back to item (1) above), that divides the purely subjective judgment conclusions about the relative demand-energy classification of the production plant—where the true measure can never be known and might be many more thousands greater, or lesser.

Thus, apart from the income and other tax questions which are treated below, the cost of service differences fade into insignificance. But even if it were otherwise, rejection of the increases is not necessarily called for. Assuming that continued refinements and further research might conceivably reestablish or locate various items of difference in terms of a few thousands of dollars out of the $1.8 million being charged, or not over one or two percent, it is the opinion that, for the reasons stated below under "IX–Rate of return," the rates proposed and presumably to be refiled would not require to be rejected.

One specific difference more. The intervener's study uses a somewhat different, and seemingly unusual, method of determining the kilowatt figure representing each city's demand responsibility. The company and the Staff average the peak usage in four separate winter months, a technique which is believed to give a more promising result, especially since no method can guarantee certain accuracy.

VIII. Tax Allowance

(A) *Income tax depreciation formula*: Using a proportion of effort and argument that might better be addressed in a more likely case, the city interveners have projected a double-barreled income tax controversy, proposing—

(1) that the company be credited in the income tax allowance only with the smaller amount the company would have paid to the Internal Revenue Service *had* the company chosen to take advantage of the tax law's two programs for tax reduction or deferral by more favorable depreciation; and

(2) that the tax savings so resulting be required to be reflected in lower rates to the city customers (the so-called flow-through).

The reference of course is to the tax computation method which uses an accelerated rate of depreciation (I.R.C., Section 167) and to the guide line service lives which were promulgated, or at least announced, by the taxing authorities last year (I.R. Procedure 62.21). The trouble is the company pays its income tax on the same straight-line basis as always, and, after full policy deliberation, has concluded that it proposes to continue to do so.

Parenthetically, the entire question becomes of real value to the cities only if there should be adopted the joint-costing technique which "rolls together" the cost of service of both the company and of its parent, Wisconsin Electric—then the tax "savings" could apply to both. But that technique has been rejected herein—see Part VI above. Limiting the question to Wisconsin Michigan alone, the Staff's July brief, App. B, computes the tax savings under the two programs at only $17,000, which means that the rate reduction here sought would amount to only 1 percent.

The cities must prevail on both points if the results are to help their rates, hence the second one may be taken up first. But no such issue is open at this, the initial decision stage. The Commission, by regulation and decision, has directed that the tax savings accruing from these programs be set aside in a special reserve, which may be invested in company facilities, with return allowed at 1½ percent. See 25 FPC 431 and the numerous decisions, regulations, and court opinions there referenced; also *Panhandle Eastern Pipe Line Co.* v. *F.P.C.* (CADC, March 15, 1963), 316 F. 2d 659; cert. denied, 375 U.S. 881 (1963); *Cities of Lexington, et al.* v. *F.P.C.* (CA 4), 295 F. 2d 109; *Appalachian Power Co.*, Op. No. 375, 28 FPC 1199; FPC Order No. 204, 19 FPC 837.

The order just cited prescribes the reserve accounts and appears to direct that tax deferrals shall be there recorded, which has all the status of a regulation and necessarily negates any other use of such funds.[29] That which the Commission forbids by regulation can hardly be sanctioned or permitted by the initial decision of a hearing examiner. The parties refer to certain pending proceedings to reconsider the matter of "flow-through," such as Alabama-Tennessee (G–5471), and the rule-making Docket R–232. Should there occur a revision of the present announced rules and policies, this question could be reconsidered (prospectively—see 27 FPC 1180). As of now, these tax deferrals or savings are not available for reflection in customer rates.

In that state of the record it is not necessary to prolong the first issue, since without "flow-through" the tax reductions are of no immediate moment to the utility customer (4T236). It is enough to record that the Internal Revenue Code and the Treasury clearly make the use of these two tax methods subject to the taxpayers' management policy election, and this choice the Federal Power Commission has foregone any measure to control. Upon a rational basis believed adequate to its policy-forming board, the company has made that election, that is, has determined to compute its taxes currently as figured from the straight-line rate of depreciation, with service lives as prescribed and approved by the state commission (Exs. C–33, 34, 35). The company might have concluded otherwise, but that is not, under present precedents, to be required of them.

---

[29] It is not quite clear that the accounts prescribed cover the use of guideline rates as well—see account 266:3 as to "deferred taxes on income—other," 19 FPC at p. 845. As to this, the distinction (so far as tax deferrals is concerned) between guideline rates and liberalized depreciation seems to be one of semantics and theory, with no real practical distinction—which would seem to call for the same treatment with respect to "flow through." But in any event, the conclusion stated in the following paragraph is certainly equally applicable to both, and thus forecloses the issue here.

(B) *Investment tax credit*: Beginning with 1962 (after the 1961 test year herein), the Internal Revenue laws prescribe an abatement of tax equal to 3 percent of the current investments made in certain property.[30] It is not an optional item; the company expects to take advantage of it (3T297), and its President testified that 48 percent of the savings should "flow through" by a credit to a net income (Ex. C-37, p. 27).

This subject is also involved in current rule-making proceedings, Docket No. R-252, to prescribe the accounting treatment for this credit. Meanwhile, the Commission's order No. 261 of January 9, 1963, 29 FPC 62, directs that the amounts so saved and abated be credited to Account No. 253, "Other Deferred Credits," subject to later adjustment and filings as may be required. It is reported the Wisconsin Commission has announced a "flow-through" requirement (Ex. C-37, p. 27). Certain pending legislation (H.R. 7111, 88th Congress) may also affect the matter.

In that posture, at least pending further rate filings (which are expected to reflect this saving), no present action herein is called for, nor do the parties' briefs appear to request any. The action to be required and taken is that which may be called for by the rule-making proceeding referred to.

(C) *New tax rates in effect*: Effective in 1962, the Wisconsin property tax was reduced by 10 percent, under a law passed in 1961, before the present rate filings were made. However, in keeping with its policy of eschewing any and all adjustments, up or down, after 1961,[31] the company's filing and proofs do not reflect this tax saving, evidently about $8,000 to $9,000. Their brief points to the possible repeal of the 1961 reduction. Both the Staff and the cities call for recording this credit and ask its reflection in the rates (Cities' July brief, p. 38; Staff September brief, p. 30, Oct. p. 10).

Under the cost of service system any direct tax (*i.e.*, property or income) is a fully reimbursable item, *pro tanto*; whatever its amount it is added to the costs, included in the rates as fixed from time to time, and thereby charged to the ratepayers, with the company's intervention solely as a collecting intermediary.[32] In that sense, the property and income taxes are in reality an excise—Ex. C-3A shows that the two income taxes (Federal and state) and the property tax come to .15¢ out of each dollar (or roughly .15¢ per kilowatt hour) in the cost of service to be recouped from the customers. Under ordinary principles any excess collection of tax reimbursement from the ratepayers, unless treated for their account, is inevitably a windfall to the company and its beneficial owners, the common stockholders.

Accordingly, any refiling of the rates should reflect the amount of this tax saving. It is not in the class with the diverse cost adjustments, such as those in coal and wages, upon which the company justifiably stands on the 1961 record. Taxes are inevitable, certain, and uncontrollable; their reimbursement in the rates should be dollar for dollar, neither more or less.

Of course, if there is a repeal of this tax saving before the new filing, no adjustment is called for. But the property tax is not different in this respect from the Federal and state income taxes—each is just another line in the cost of service. The forum is not required to ignore that legislation is also pending to revise the Federal tax law, to reduce the corporate income tax from 52 percent to 48 percent. The order herewith must treat them alike; it anticipates accordingly that any new filing shall reflect the true tax liability in these several respects which is current at the time of filing.

IX. Rate of Return

The company argues for a rate of return at 6.50 percent, the Staff recommends 6.0 percent and the city interveners propose 5.55 percent, all based as follows:

(A) The company's 6.5 percent figures out to 10.5 percent on the common equity, that share being 40.9 percent of the total capital. This is on a "cost of money" theory, it appearing that comparable utilities earn over 12 percent on their equity share (C–27, p. 2).

(B) The Staff's 6.0 percent produces 9.29 on the equity, and is a net resulting judgment figure worked out by the Staff expert witness, who studied the company's own record and its capital ratios, the data of other utilities and businesses, earnings-price ratios, and many other factors, as required by *Safe Harbor*, 2 FPC 191.

(C) The cities' 5.55 (8.27 on equity) comes from the *South Carolina* case (1956), 16 FPC 52, said to be the latest FPC precedent in this field. Otherwise it depends mostly on price-earnings ratios, using the Staff's evidence that this ratio averages 5.23 percent.

The trouble is none of these studies is addressed to the facts of the case. The opposition's rebuttals presume the showing they are to meet is the 6.5 percent rate discussed by the company. For all the interesting but moot discussion about the 6.50–10.50 theoretical rate sponsored by the company, those figures are quite irrelevant.

The purpose of the hearing was not to explore rates of return, *in vacuo*, but to pass on the actual electric sales rates filed. The company says their new wholesale rates will bring in $1.815 million in revenues. Hence the only question is whether *that* amount will result in a return which is just and reasonable. By their figures this amount of revenue will produce a return of only 5.62 percent (Ex. C–3A, Sch. 24).

But this figure may be stated too low. Staff shows a 6 percent return out of a cost of service $31,858 below the revenue total just stated (15T1956). Using that cost for a base, as adjusted under Part VII above, the actual return to be expected from the rate increases filed, which is the subject of this case, appears to be between 6.1 and 6.2 percent, or practically the same as the 6.13–6.15 percent rate figured by the Wisconsin commission in the company's recent rate case on its retail business (Ex. C–17).

Thus the 6.5 discussion (Par. (A) above) is irrelevant since no one expects to earn, charge, collect, or pay it. The cities' 5.55 relies too much on a case where the utility's common equity was unusually low;[33] they also unduly rely on the price-earnings ratio, which of course is on the base of the market price, not on the book value.

The Staff study (6.0–9.29) has the virtue of showing thought and weight given to all factors and might well prevail over the 6.1 or 6.2 which the company's actual new rates seem to claim, except for two factors:

(1) The Staff briefs recite the many pertinent factors of the company's operations, the money market, other companies' earnings, average price-earnings ratios, and others, but twice there is mentioned a "negative factor" (ap-

---

[33] This is the *South Carolina* case where it is notable the return allowed on equity (which, after all, is the real controlling and decisive factor) was 10.50 percent, the same figure the company sponsors here. 16 FPC 52, 64.

parently a *downward* influence), arising from the company's "failure" to take advantage of liberalized depreciation in figuring its income tax (see part VIII above). Just why that should be a depressing factor in the earnings allowance is quite unexplained and, unless sanctioned by commanding authority, should be specifically negated. It was shown above that both the tax laws and the FPC regulatory policies make this tax depreciation method entirely optional, a responsibility of the company's management. But that is a Hobson's choice indeed if its free exercise works a reduction in the quite unrelated matter of the rate of return. There can be no penalty for the adoption of a program which both the law and the Commission freely permit, in fact which perhaps should be encouraged.

(2) It is not clear, on the other hand, that the 6.0 percent allows anything for the company's excellent over-all record, as shown by the average sales price comparisons in evidence—the city customers in this case have been served electricity at the lowest rates charged to any city in the entire state, with one minor and atypical exception (Exs. C–7, C–8).

The company's true claim (evidently 6.1–6.2 percent) results from a set of rates worked out for the company's major, retail business by the Wisconsin commission and serves the highly desirable policy of equalizing interstate rates with the large retail users' own rates. As suggested above, that purpose—to apply the same pattern to the local and to the interstate business—would justify absorbing minor differences in the cost of service, and should likewise sanction a uniform rate of return, as near as may be, on both classes of service. In any event, the 6.1–6.2 percent rate of return is well within the zone of reasonableness, and no reason appears to take exception to the rate increases on that score.

X. *Other Questions*

In the 400-odd pages of briefs in this case (and the 2,000-odd pages of transcript and 100 exhibits) there lurk quite a composite of points, objections and questions, all of which have been fully considered, and it is the belief that all are covered in the foregoing and in the following residuary clause:

(A) *High voltage discount*: The cities ask for evidence to justify "the elimination of the high voltage discount," saying none was presented to the two state commissions (when the retail rate was raised last year). The reference to the state commission hearings on the retail rates seems to betray a rather unwonted affinity to the company's large-user retail rate schedule (*cf.* p. 1475, above, under IV–C); anyway the discount has not been eliminated. For example, Shawano's 1948 contract incorporated a 7 percent discount for high voltage, deprived from Schedule VIII–A of the retail tariff, whereas the new rate substitutes a 15¢ credit per kw of billed demand for service at over 25 kv (10¢ off for service between 12 and 25 kv). The 15¢ is 10 percent of the median demand charges shown on the same page.

(B) *Kaukauna's demand*: The cities point out that Kaukauna lost its biggest customer in January 1962, which calls for a downward adjustment from the 1961 test year figures used to set the typical demand. But Kaukauna's demand and purchases are still high, absolutely and perhaps relatively. The point is adequately and copiously answered in the Staff's September brief, pp. 21–29. Kaukauna is still "The Electric City," as its seal proclaims.

(C) *The minimum rate*: The former Wisconsin retail rate VII–B included a minimum annual bill provision at $12 per year per kva, where a customer maintains its own power plant, figured on its capacity, since the company's service then becomes an auxiliary. The new rate schedules increase this to $18. The two cities affected are Kaukauna (Wisconsin) and Crystal

Falls (Michigan, whose contract minimum was based on its demand). The company has agreed that the Kaukauna contract bars this change for it (see p. 19 above, under IV-E), but Crystal Falls' contract was canceled three years ago (Ex. C-19). It will be assumed that any re-filing of the new schedule for Crystal Falls will be accompanied by a justification of the $18 minimum bill provision.

(D) *Energy resold*: The Staff objects to a proviso in the new rates which forbids the customer to sell to another utility for resale. No answer to this is noted, and the point is covered in their proposed finding, which is No. 7 of the "findings" below. So far as appears, this question applies equally to all.

(E) *Filing company regulations*: A point is raised in the Staff's July brief about certain company rules which should be filed with the tariffs. The company accedes (October brief, p. 10), and the point is covered in "finding" No. 8, below.

(F) *Rate design*: The total rate increases amount to 14 percent, but, apparently because of internal changes between the demand and energy elements, the increases to the respective nine cities vary widely from 3.7 percent for Crystal Falls to 31 percent for Florence (figured from Ex. C-3A, Sch. 22). To this undocumented change the cities object, as follows (Sept. brief, p. 36):

> The Company rests its case on rate design on the prior approval of similar rates for large retail users by the Wisconsin and Michigan commissions. WM. Op. Br. 40-41. No witness sponsored it in this proceeding nor was any evidence offered to support it. Moreover, the record in this case does not reveal, nor did any company witness know, how the retail rate structure which the company has proposed herein for these wholesale customers was developed before the Wisconsin and Michigan Commissions. The circumstances, proof (if any), and arguments which might have moved those commissions to alter the structure of the retail rates and thereby redistribute the revenue load among the retail customers in addition to increasing it in total, are not known, and obviously might not apply to the wholesale customers here.

The company relies on the cities' contracts (*i.e.*, the savings clause discussed above) but agrees this change is "subject to Federal Power Commission review under Section 205." (Sept. brief, p. 85). Accordingly, in order that that review may be had, it will be expected that any re-filing of the rate increases be accompanied by a showing in justification of the change in design, particularly as to why the rate design for large retail users is rationally appropriate for these city customers, who buy for resale and to meet the highly diversified electric needs of their many customers.

XI. Findings and Order

Upon consideration of the whole record, and those matters officially noticed, it is further found and concluded—

(1) The Wisconsin Michigan Power Company (Wisconsin Michigan), a Wisconsin corporation, is a public utility within the meaning of Section 201 of the Federal Power Act and subject to the jurisdiction of the Commission as heretofore determined by order of the Commission issued September 17, 1958, *Wisconsin Michigan Power Company, et al.*, 20 FPC 358.

(2) Wisconsin Michigan, in effecting each of the sales of electric energy at wholesale to the following purchasers, transmits and sells electric energy at wholesale in interstate commerce for resale within the meaning of Sections 201, 205, and 206 of the Federal Power Act:

(Clintonville, Wisconsin), Rate Schedule FPC No. 24, as supplemented;
(Crystal Falls, Michigan), Rate Schedule FPC No. 36, as supplemented:

(Florence, Wisconsin), Rate Schedule FPC No. 38;

(Kaukauna, Wisconsin), Rate Schedule FPC No. 43, as supplemented;

(New London, Wisconsin), Rate Schedule FPC No. 41;

(Oconto Falls, Wisconsin), Rate Schedule FPC No. 39, as supplemented;

(Shawano, Wisconsin), Rate Schedule FPC No. 33, as supplemented;

(Wisconsin Public Service Corporation), Rate Schedule FPC No. 12, as supplemented; and

(Upper Peninsula Power Company), Rate Schedule FPC No. 25, as supplemented.

(3) Wisconsin Michigan's rate filings supplementary to the above schedules, submitted to be effective March 30, 1962, pursuant to Section 205 of the Federal Power Act, are unduly discriminatory and are unlawful within the meaning of Section 205(b) of that act.

(4) The supplemental rate schedules referred to in finding No. 3 above, as proffered by Wisconsin Michigan and retained in the files of the Commission pending Commission determination of the lawfulness thereof, are unauthorized rate schedule filings under Section 205 of the Federal Power Act.

(5) Wisconsin Michigan, in collecting after August 30, 1962, the rates and charges embodied in the supplemental rate schedules referred to in finding No. 3 above, collected rates and charges under schedules which, although retained in the files of the Commission, are determined to have been improperly filed with this Commission and therefore not effective as rate schedules under the Federal Power Act.

(6) Wisconsin Michigan, by reason of its collection of rates and charges as specified in finding No. 5 above, is obligated to return to the respective payers the amounts (without interest) collected on and after August 30, 1962, in excess of the amounts which would have been collected if computed in accordance with Wisconsin Michigan's rate schedules, and supplements thereto, applicable up to that date.

(7) Wisconsin Michigan's Rate Schedule FPC No. 36, Supplement No. 3 (Crystal Falls, Michigan), No. 12, Supplement No. 3 (Wisconsin Public Service Corporation) No. 25, Supplement No. 3 (Upper Peninsula Power Company) provide in part:

> Rate For Primary Service to Electric Public Utilities * * * Conditions of Delivery * * * 2. Energy furnished under this rate shall not be resold to any other electric public utility for resale without approval of the Company

and those schedules are by reason of that provision unduly restrictive in controlling activities of the respective purchasers (Crystal Falls, Michigan, Wisconsin Public Service Corporation and Upper Peninsula Power Company), and serve no useful purpose of Wisconsin Michigan which is not otherwise served by definition in the rate schedule of the maximum demands and quantities of electric power and energy available thereunder.

(8) Wisconsin Michigan's rate schedules and supplements thereto, as designated and referred to in finding No. 7 above, are also shown to be incomplete as currently filed with this Commission due to Wisconsin Michigan's failure to file, as a part thereof, "Company's Rules and Regulations" as referred to in the "Rate For Primary Service To Electric Public Utilities * * * Conditions of Delivery * * * 11. Service under this rate shall be furnished only in accordance with the Company's Rules and Regulations."

(9) There are no contractual provisions contained in any of the rate schedules referred to in finding No. 2 which prohibit the filing of the proposed rate changes, or which prohibit putting into effect said proposed rate changes.

(10) Any new rate filings for the customers above listed should, to be acceptable, be at no higher level than the rate schedules referred to in finding

No. 3, and should otherwise be in accord with the determinations expressed in the foregoing.

ACCORDINGLY, IT IS ORDERED, subject to review by the Commission, that—

(A) Within thirty days of the effective date hereof, Wisconsin Michigan shall make the refunds referred to in finding No. 6 above.

(B) Until any new rate schedule filings for the customers listed in finding No. 2 shall have become effective by virtue of an order of the Federal Power Commission, Wisconsin Michigan shall continue to serve the wholesale purchasers pursuant to the rate schedules there listed.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. G-1964

ORDER ON REMAND

(Issued June 9, 1964)

This case is before us on remand from the United States Court of Appeals for the Fifth Circuit, *Texas Eastern Transmission Corp.* v. *F.P.C.*, 306 F. 2d 345, setting aside 25 FPC 955.[1]

By order issued October 9, 1953, the Commission approved a settlement reached by all the parties to the increased-rate proceedings in Docket No. G-1964. One of the provisions in the Commission's order required Texas Eastern to make refunds and rate reductions in the event that it should receive certain specified refunds or reductions as a result of the final order in a proceeding involving the rates of one of its suppliers. Settlement of the supplier's rate case was approved as of August 1, 1954.[2]

Shortly thereafter, the Commission and Texas Eastern began a protracted series of correspondence and conferences, wherein the Commission or its staff contended that Texas Eastern had an immediate refund and rate-reduction obligation and Texas Eastern contended that it had no such obligation. The course of these exchanges is narrated in detail in the court's opinion, and it is sufficient to state here that by the fall of 1958, the issue was still unresolved. At that time, Texas Eastern, while asserting its view that its legal liability under the October 9, 1953 order was limited to $385,569, tendered to its customers, in *pro rata* shares, a total of $3,862,572 in purported "full and complete satisfaction, settlement, and discharge of any and all obligations, requirements, and conditions" of that order. All of Texas Eastern's customers, except Manufacturers Light & Heat Company, and Ohio Fuel Gas Company (the Columbia Companies) accepted the offer, signed the purported releases, and, so far as the record reveals, cashed Texas Eastern's checks. Thereupon, Texas Eastern submitted to the Commission a letter stating that it has fully complied with the requirements of the October 9, 1953 order "by reaching a full and complete settlement with all of its customers except . . . [the Columbia Companies] and by tendering to . . . [the Columbia Companies] amounts far in excess of any obligations" under that order.[3] The Columbia Companies protested against this report of compliance, contending that Texas Eastern's legal liability exceeded the total amount of $3,862,572, which it had offered.

---

[1] Certiorari denied *sub nom., Manufacturers Light & Heat Company* v. *Texas Eastern Transmission Corporation*, 375 U.S. 941.

[2] *United Gas Pipe Line Company*, 13 FPC 398.

[3] The amount tendered to the Columbia Companies was $1,051,071.

By order of March 13, 1961, the Commission rejected Texas Eastern's settlement proposal and directed Texas Eastern to pay to *all* the customers (those who had accepted Texas Eastern's tender, as well as the Columbia Companies), certain specified amounts, which would have totaled substantially more than the $3,862,572 previously tendered. This order was set aside by the Court of Appeals upon Texas Eastern's petition for review. The Court held that Texas Eastern's total refund liability under the October 9, 1953 order was limited to $385,569.[4]

Under the mandate of the Court of Appeals, the Commission must determine the amount which Texas Eastern is now obligated to refund to the Columbia Companies. By order issued June 20, 1963, the Commission directed Texas Eastern and Columbia to file proposed findings and conclusions with respect to this issue. The parties were requested to give specific consideration to the question of whether or not the payment to the Columbia Companies of anything less than the $1,051,071 previously tendered them would subject the Columbia Companies to an undue prejudice or disadvantage, or result in an unlawful rebate to the other customer.

We have considered the memoranda filed by the parties and have concluded that our authority to order refunds is plainly limited by the decision of the Court of Appeals. We shall therefore require that Texas Eastern refund $54,111.56 to Manufacturers and $65,310.20 to Ohio Fuel. On each of these amounts we will require interest, at six percent per annum.[5]

We do not believe Texas Eastern has any obligation to pay the Columbia Companies more than it owed them simply because it made an offer to all its customers, which the others accepted and the Columbia Companies alone saw fit to reject. In retrospect it is clear that Texas Eastern should have made its tender subject to approval by the Commission, but its failure to do so is not a sound basis for requiring additional overpayments. Texas Eastern may very well be entitled to recoup these overpayments but if it is unable to do so its stockholders, and not its consumers will bear the expense.

We recognize that this result could be said to discourage distributors from rejecting apparently inadequate settlement offers because of their fear that unless they accepted a compromise tender when made they might never recover even this sum. No such result is intended. To insure that distributors will not be so constrained, we shall require in the future that no payment in settlement of a pending Commission proceeding be made by any natural gas company prior to approval by the Commission. We think, however, that there is no violation of the statutory prohibition against discrimination by a natural gas company if in the situation where one of a group refuses an offer of settlement, even improvidently tendered, that is accepted by the others, the offering company does not retender the original offer when it is determined to be in excess of offerer's legal obligation.

---

[4] The Columbia Companies share of this amount is $119,421.76, of which Manufacturer's share is $54,111.56 and Ohio Fuel's share is $65,310.20.

[5] Texas Eastern appears to suggest that it was relieved of its duty to pay interest on its refund obligation as of October 1, 1958, the date on which it tendered to the Columbia Companies an amount in excess of the $119,421.76 and interest then due. The Commission is not persuaded that this tender of an amount in purported satisfaction of an unliquidated obligation had such an effect. It is significant that after the Columbia Companies rejected Texas Eastern's offer, Texas Eastern did not tender $119,421.76, plus the interest then due thereon, in satisfaction of the Columbia Companies undisputed claim to that amount. This could have been done while leaving to adjudication Columbia's claim for additional payment. Instead, Texas Eastern has retained and had the use of this liquidated amount, and accordingly, the Commission shall order payment of interest thereon from August 1, 1954 until the date of actual payment.

The Commission orders:

(A) Within thirty days from the date of this order, Texas Eastern shall refund to The Manufacturers Light & Heat Company $54,111.56, plus interest as prescribed herein.

(B) Within thirty days from the date of this order, Texas Eastern shall refund to The Ohio Fuel Gas Company $65,310.20, plus interest as prescribed herein.

(C) Texas Eastern's motion for oral argument is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2075

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued June 9, 1964)

The Washington Water Power Company, Licensee for Project No. 2075,[1] on March 30, 1961, filed its initial statement of actual legitimate original cost of the project, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming as of December 31, 1960 an actual legitimate original project cost of $85,008,887.17, as is more specifically shown in the attached Schedule I.[2]

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed and recorded project costs. Following this study, the staff, subject to Commission approval, proposed certain adjustments which were agreed to by Licensee's representatives. The proposed adjustments involve (1) a reclassification of certain engineering costs totaling $265,228.07 within the project plant accounts as shown in the attached Schedule II; (2) the elimination of the net amount of $323,237.69 from the claimed and recorded project costs as shown in the attached Schedules I and II; and (3) the accounting disposition of the foregoing amounts as shown in the attached Schedule II. Based upon the proposed adjustment, the resulting recommended project cost is $84,685,649.48, as of December 31, 1960, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961, as shown in the attached Schedule I.

The recommended project cost includes certain charges to Licensee for engineering and construction management services by Ebasco Services Incorporated, a part of which may represent intercompany profits which violate this Commission's rule prohibiting profits to affiliates. Therefore, the staff recommends that the determination of the cost of Project No. 2075 at this time be made subject to possible further adjustment to reflect all necessary changes by reason of any later Commission determination that any part of the charges to Licensee by Ebasco Services Incorporated represent such intercompany profits.

---

[1] The project may be described as the Noxon Rapids Hydroelectric Project. It is located on Clark Fork, a navigable water of the United States, in Sanders County, Montana, and affects public lands of the United States and lands of the United States within the Kaniksu and Lolo National Forests. The license, authorizing the construction, operation and maintenance of the project, was issued pursuant to Section 4(e) of the Federal Power Act for a period of 50 years, effective as of May 1, 1955 (14 FPC 731, 734). The project began commercial operation on August 15, 1959.

[2] Article 23 of the license for the project provides for Commission determination of the actual legitimate original cost of the project and changes therein.

By letter dated September 24, 1963, Licensee confirmed its agreement to the adjustments proposed by the staff and resulting project cost, as set forth above.

The Washington Utilities and Transportation Commission and the Montana Board of Railroad Commissioners were advised by this Commission of the proposed adjustments and resulting project cost by letters dated October 1, 1963. The Washington Commission, by letter dated October 3, 1963, and the Montana Board, by letter dated October 15, 1963, indicated no objection thereto.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting disposition and resulting project cost, and the Washington Utilities and Transportation Commission and the Montana Board of Railroad Commissioners, by their lack of objection thereto, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting disposition, are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) As of December 31, 1960, the actual legitimate original cost of Project No. 2075 is $84,685,649.48, classified by primary plant accounts as shown in attached Schedule I.

(4) It is necessary and appropriate for purposes of the Federal Power Act, the Commission license for Project No. 2075, and the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, that the Commission reserve for future consideration the matter of revision of Licensee's actual legitimate original cost of Project No. 2075, as determined herein, to reflect such further adjustments therein as may be necessary in the event that any portion of the cost of the project representing charges to Licensee by Ebasco Services Incorporated is determined to represent intercompany profits which violate this Commission's rule prohibiting profits to affiliates.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The adjustments, including the accounting disposition, proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by the Licensee as shown in the attached Schedule II.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts showing the amount of $84,685,649.48 as the actual legitimate original cost of Project No. 2075 as of December 31, 1960, classified by primary plant accounts as shown in the attached Schedule I.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission three copies of FPC Form No. 7 as of December 31, 1960, showing compliance therewith, and shall submit two copies of FPC Form No. 7

to the Regional Accountant, Federal Power Commission, San Francisco, California.

(E) The actual legitimate original cost of Project No. 2075, as determined herein, is expressly subject to revision as set forth in finding (4) above.

SCHEDULE I

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2075 (NOXON RAPIDS)

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2075

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued June 9, 1964)

On December 17, 1963 and on March 12, 1964, The Washington Water Power Company, licensee for Project No. 2075, located on Clark Fork River in Sanders County, Montana, filed for Commission approval certain modified Exhibit K prints which show corrections and changes which should be made on Exhibit K tracings now on file with the Commission, and authorized our staff to correct the Exhibit K tracings accordingly. This the staff did on March 12, 1964.

The sole effect of the changes is to show on the Exhibit K tracings an additional 0.1 acre of lands of the United States as having been occupied by the project from the effective date of the license, namely, May 1, 1955.

The Commission finds:

(1) The following described Exhibit K tracings on file with the Commission and corrected by our staff as noted above, conform to the Commission's rules and regulations, and should be reapproved as part of the license for the project.

Exhibit K: revised March 12, 1964 (FPC No. 2075-91, -92, -96, -99, -100, -102, -103, -104, and -110).

(2) The increased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The corrected Exhibit K tracings designated in finding (1) above are hereby reapproved as part of the license for Project No. 2075.

(B) Subparagraph (ii) of Article 36 of the license is hereby revised by substituting the figure ($2,715.10) for the figure ($2,714.86) appearing therein, effective as of May 1, 1955.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168,[1] G-20435,[1] AND G-20577[2]

ORDER DENYING APPLICATION FOR REHEARING

(Issued June 9, 1964)*

The Superior Oil Company on May 13, 1964, filed an application for rehearing of the Commission's order issued April 15, 1964, in the above-entitled proceedings. In the April 15 order we modified our order issued March 9, 1964, so as to require Trunkline to pay interest on those amounts properly payable but not tendered by Trunkline as determined in the March 9 order.

---

[1] Consolidated with the area rate proceeding in Docket No. AR64-2, *et al.*

[2] Consolidated with the area rate proceeding in Docket No. AR61-2, *et al.*

*See orders on remand issued June 16, 1965, 33 FPC 1268 and November 10, 1965, 34 FPC 1284.

Superior contends in its application for rehearing that interest should be required on the total amount payable by Trunkline to it. Superior claims *inter alia*, that Trunkline's tender of amounts in accordance with its petition for a declaratory order rather than the amounts properly due as decided in our March 9 order rendered the alleged tender totally ineffectual. Superior asserts in light thereof that it is entitled to interest on the total amount due.

We think it clear from an examination of the pertinent portions of the Trunkline letters transmitting its remittance that Superior could have accepted Trunkline's tender of payment without endangering its position that a larger amount was due either as a contractual matter or under the provisions of the Natural Gas Act. In this regard the covering Trunkline letters state:

> The acceptance of the enclosed check will not in any respect prejudice the payee's rights with respect to the amount payable for the gas to which such check relates.

Superior, however, contends that Trunkline's tender was rendered uncertain and equivocal by the provisions on the checks that they are "paid in accordance with the Petition for Declaratory Order filed October 25, 1963," and "If not correct return without alteration." We cannot agree with Superior's position. The first phrase quoted above obviously relates to the method utilized by Trunkline in computing the amount it believed owing to Superior. The latter phrase relates to the correctness of the computation using Trunkline's basis. Neither of these phrases in our opinion rendered the tender a conditional one. Under these circumstances we conclude that it would not be appropriate or in the public interest to extend the interest requirement provided in our April 15 order as requested by Superior. We shall therefore deny Superior's application for rehearing.

The Commission orders:

The application for rehearing filed by Superior on May 13, 1964, in the above-entitled proceedings is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NOS. RP61-21, RP63-2, CP63-13; MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP63-12

ORDER DEFERRING ACTION ON MOTION, GIVING NOTICE OF INTENT TO AMEND AND WITHDRAW APPLICATIONS, AND CONTINUING PROCEEDING, AND PRESCRIBING PROCEDURE AND SETTING DATE OF FURTHER HEARING

(Issued June 9, 1964)

On May 27, 1964, the above-named applicants filed a motion captioned, "Motion for Approval of Stipulation and Agreement, Termination of Rate Proceedings, and Issuance of Certificate in Docket No. CP63-12 as Amended in Accordance with such Stipulation." Attached to said motion was a document titled "Stipulation and Agreement Dated March 12, 1964, as Revised May 6, 1964."

By the above referred to Stipulation Agreement and Applicants would settle out the issues presented in Docket Nos. RP61-21 and RP63-2 and thereby terminate those proceedings, contingent, however, upon the amending of the application in Docket No. CP63–12 and withdrawal of the application in Docket No. CP63–13 so as to conform with the proposed Stipulation Agreement, as amended, and further contingent upon the issuance of a certificate of public convenience and necessity to Mississippi Transmission in Docket No. CP63–12, as amended. The consolidated proceeding in these latter two dockets, now before a Presiding Examiner for hearing, has been indefinitely postponed upon the request of Applicants. The proceeding in Docket No. RP63–2 is presently before this Commission upon exceptions taken to an Examiner's decision. The proceeding in Docket No. RP61–21, now pending before a Presiding Examiner for hearing, has also been postponed.

The applications in Docket Nos. CP63–12 and CP63–13 were filed pursuant to Section 7 of the Natural Gas Act. Parties in opposition to the proposals contained therein who have not agreed to the grant of the applications as proposed to be amended and withdrawn were permitted to intervene and participate in the proceedings held thereon to date. Accordingly, any action on the motion to the extent it seeks approval of the proposed settlement agreement is premature; acceptance or rejection of the proposed Stipulation and Agreement, as amended, must await our disposition of the matters presented in Docket Nos. CP63–12 and CP63–13, which in turn must be based on the formal record and evidence related to those applications that shall ultimately come before us. We are, however, in a position to take action here to establish the appropriate further procedures in the certificate proceedings so that this matter may be promptly presented to us for our consideration.

The Commission orders:

(A) Notice is hereby given of the Applicants' intent to amend the application in Docket No. CP63–12 and withdraw the application in Docket No. CP63–13 so as to conform with Applicants' proposals in its proposed Stipulation and Agreement, as amended.

(B) Leave is hereby given to the Applicants' to file a formal amendment to the application in Docket No. CP63–12 and a request for withdrawal of the application in Docket No. CP63–13, in full compliance with the Commission's Rules of Practice and Procedure.

(C) In the event that such amendments are filed as provided in ordering clause above by June 15, 1964, and by that date the Applicants serve, upon all parties to the proceeding in those dockets, copies of said filings along with copies of any additional testimony and exhibits to be submitted in the proceeding in support of said filings, as well as all workpapers in support of such testimony and exhibits, the hearing on such applications or application as amended shall resume on July 6, 1964, with a cross-examination to immediately follow introduction of any such additional direct presentation by the parties. If the amended application, additional testimony or exhibits and workpapers are filed and served at any time after June 15, 1964, the date for the resumed hearing shall be postponed for an equivalent period. In the event no such filings are made by July 15, 1964, the hearing on the applications as originally presented shall resume on July 22, 1964.

Commissioner Black *dissenting in part.*

BLACK, Commissioner, *dissenting in part:*

I dissent to the procedures adopted by the majority in this matter, because it would defer Commission action in the Mississippi River rate case, Docket No. RP63–2.

The instant motion requests the Commission's approval of a proposed settlement of various rate and certificate matters involving Mississippi River Fuel and Mississippi River Transmission. One of the essential features of the settlement is the disposition of RP63-2, a rate case in all respects ripe for decision by the Commission, and one involving $4.4 million subject to refund and potential rate reductions of $3.3 million per year. The effect of the majority action is to preclude Commission action on this rate case until a contested certificate matter, essentially unrelated to the issues of the rate case, is litigated. This will necessarily involve a complete hearing, filing of briefs, a comprehensive examiner's decision, exceptions, and possibly oral argument before the Commission and court review.

While I concur with the procedures established for the hearing in the certificate case, I would reject the settlement offer so that the rate case could be speedily determined. Section 4(e) of the Act states quite clearly:

> [T]he Commission *shall* give the hearing and decision of such questions (rate increase filings) preference over other questions pending before it and decide the same as speedily as possible. [Emphasis supplied.]

In my opinion, the procedure adopted by the majority does not comport with this statutory duty, and will undoubtedly deprive the consumers of substantial refunds and rate reductions for an indefinite period of time. I am satisfied that the public interest considerations which dictate a speedy resolution of these rate proceedings far outweigh any benefits contemplated by the settlement offer.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

PENDLETON COUNTY WATER DISTRICT, DOCKET NO. CP64-23

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 10, 1964)

On July 24, 1963, as amended on November 26, 1963 and February 17, 1964, Pendleton County Water District (Applicant) filed in Docket No. CP64-23 an application pursuant to Section 7 (a) of the Natural Gas Act for an order of the Commission directing Kentucky Gas Transmission Corporation (Kentucky Gas) to establish physical connection of its natural gas transmission system with the facilities proposed to be constructed by Applicant in Pendleton County, Kentucky and to sell and deliver natural gas to Applicant for resale and distribution in the area on the perimeter of the Cincinnati Metropolitan area including the communities of Falmouth, Butler and East Side Park and their environs, all as more fully set forth in the application and open to public inspection.

Applicant proposes to construct and operate approximately 17.5 miles of 4-inch transmission line to connect with distribution systems in the communities above mentioned. The estimated cost of the project is $643,250, and is to be financed by sale of revenue bonds and customer connection fees.

The application shows the estimated annual and peak day requirements of natural gas in Mcf to Applicant are as follows:

	First year	Second year	Third year
Annual (Mcf)	90,140	110,131	130,123
Peak day (Mcf)	828	1,014	1,201

Applicant has received appropriate authorization from the cities of Falmouth, Butler and East Side Park to include them within the boundaries of the said Pendleton County Water District for the purpose of being served natural gas in their distribution systems.

On August 29, 1963, as supplemented on December 19, 1963, Kentucky Gas filed its answer to the application stating that it had no objection to the granting thereof.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on April 21, 1964, (29 F.R. 5365). No protest or petition to intervene in opposition to the granting of the application has been filed.

The Commission finds:

(1) Kentucky Gas Transmission Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 9, 1956, in Docket No. G-9689 (16 FPC 437).

(2) Applicant, Pendleton County Water District is a Municipality of the State of Kentucky organized and existing under the laws of that State and is authorized to engage in the business of distributing and selling natural gas within its boundary area.

(3) It is necessary and desirable in the public interest that Kentucky Gas be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver the required volume of natural gas to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant shall be prepared to receive natural gas from Kentucky Gas within one year from the date of issuance of this order.

(5) The requirement that Kentucky Gas serve Applicant, as proposed, will not place any undue burden upon Kentucky Gas nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Kentucky Gas Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 1,201 Mcf of natural gas per day to Applicant as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Kentucky Gas within one year from the date of issuance of this order.

(C) The order issued herein is conditioned to require Applicant to obtain such necessary approval for its proposal as may be required from the State of Kentucky.

(D) Kentucky Gas shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

LONG ISLAND LIGHTING COMPANY, DOCKET NO. E-7158

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued June 10, 1964)

Long Island Lighting Company (Long Island), incorporated under the laws of the State of New York, and doing business in that State with its principal business office at Mineola, New York, filed an application on March 18, 1964, as supplemented on April 20, 1964, seeking authority to acquire, merge and consolidate with its facilities, all of the facilities of The Patchogue Electric Light Company (Patchogue), a New York corporation with its principal business office at Patchogue, New York. Long Island is a gas and electric utility company; it generates, transmits and distributes electricity to about 650,000 customers in an area of approximately 1,000 square miles in the Counties of Nassau and Suffolk and in the Fifth Ward of the Borough and County of Queens, on Long Island, New York, with the exception of the Incorporated Villages of Rockville Centre and Freeport in Nassau County and Greenport in Suffolk County as well as the service area of Patchogue in Suffolk County. It transmits and distributes natural gas in the same general area and in the Patchogue service area. Long Island had total assets and other debits as of December 31, 1963, in excess of $757,000,000 and had gross electric operating revenues in 1963 of approximately $131,145,000.

Patchogue is an electric utility, purchasing all of its electric power requirements from Long Island, and distributing it to about 28,000 customers in the service area of approximately 200 square miles which includes the Incorporated Villages of Patchogue and Bellport, and southerly portion of the Town of Brookhaven and the westerly portion of the Town of Southampton, all in Suffolk County. Patchogue had total assets and other debits as of December 31, 1963, in excess of $9,600,000 and its gross operating revenues in 1963 were approximately $4,255,000.

Patchogue and Long Island entered into an Agreement of Consolidation dated as of January 30, 1964, which was arrived at through arm's-length negotiation between Long Island and the principal stockholders of Patchogue. Under the Agreement, upon the filing of a certificate of a Certificate of Consolidation with the Secretary of State of the State of New York, 225,000 shares of Long Island Common Stock, $5 par, will be issued and exchanged for 90,000 outstanding shares of Patchogue Common Stock, no par, or 2½ shares of Long Island Common for one of Patchogue Common. This exchange ratio, according to the application, has been based on the relationships between book values, earnings, and dividends of the respective companies.

The outstanding Common and Preferred Stock of Long Island on the consolidation date will not be converted or exchanged as a result of the consolidation, but all such Common and Preferred Stock of Long Island will continue unchanged and will be Common and Preferred Stock of the surviving corporation, and all such Common and Preferred Stock outstanding on the consolidation date will remain outstanding, fully paid and non-assessable.

Immediately prior to the filing of the Certificate of Consolidation with the Secretary of State of the State of New York, Patchogue's presently outstanding 750 shares of 4.75% Preferred Stock, $1,000 par, will be redeemed at 102% of par value, plus accrued dividends. Long Island will provide redemption funds of $765,000, plus estimated funds of $8,906 for accrued dividends. None of the 750 shares of Patchogue's Preferred Stock is presently owned by Long Island.

The outstanding indebtedness of both Long Island and Patchogue as of the consolidation date will constitute the indebtedness of the surviving corporation, with the exception of Patchogue's indebtedness for electric energy purchased from Long Island.

On the consolidation date, the existence of Patchogue will cease, and the existence of Long Island will continue unaffected and unimpaired and all rights, privileges, franchises and interests of each of the constituent corporations and all of the property, real and personal, and all the debts due either of them, and all things in action, belonging to either of them, and every other interest of the constituent corporations will vest in Long Island as the surviving corporation.

According to the application, Patchogue's electric peak load and annual sales have been increasing at a rapid pace in recent years with the increase in construction of residences, commercial and industrial buildings in Patchogue's territory as available land in Nassau County and western Suffolk County disappears. A similar growth pattern has been experienced in Long Island's territory adjacent to that of Patchogue. Such growth patterns are expected to accelerate in the future and will require considerable expansion of facilities and increased capital by both companies. Patchogue's peak load in 1960 was 25,000 kw; in 1963 it was 38,000 kw; by 1974, it is estimated to be 95,000 kw. The application states that coordination of such construction by an integrated system will eliminate cost duplication of the transmission facilities in the two areas. The application also states that the ability of the consolidated company to meet substantial future capital requirements in Patchogue's territory on economical basis will be considerably enhanced as a result of the transaction.

Long Island contemplates that it will utilize the present Patchogue headquarters in the Village of Patchogue as a District Commercial and Line Headquarters. Long Island will then be able to provide in the more heavily populated portions of the Patchogue territory emergency crews on around-the clock duty; at present such personnel must be called out from their homes. Other improvements in existing practices designed to improve service to customers will be initiated according to the applicant. Such improvements include programs for more comprehensive maintenance of substations and pole line equipment, reinforcement of distribution circuits so that two circuits can be tied together in the event of outages and other improvements to prevent transmission outages. Other efficiencies will be introduced such as combining meter reading of each company and the elimination of duplicate billing facilities.

Patchogue's gross rates under the schedule that applies to most of its residential consumers are higher than Long Island's rates, but it offers a discount for prompt payment, and the net rates after allowance for the discount are lower than Long Island's. Long Island has reduced its rates twice in recent years and has proposed another rate reduction subject to approval by the New York State Public Service Commission. If the reduction is granted, Patchogue's net rate would be slightly higher than the new Long Island rate to the extreme low and high use consumers but slightly lower to consumers using between 130 kwh and 980 kwh per month. The maximum differential would be 23 cents per month.

Under present commercial rate schedules, Patchogue's charges vary from about 20% higher to about 20% lower than Long Island's depending upon the energy consumption and demand. The recently proposed reduction in Long

Island's rates would tend to close the present gap between the commercial rates of the two systems.

Long Island states that no change in rates to consumers in the present Patchogue service area is contemplated as a result of the proposed consolidation. Although further rate reductions are anticipated, if any increases were necessary they would be borne proportionately by both rate zones.

The Consolidation Agreement also provides that the present full time employees of Patchogue will be employed by Long Island without loss of seniority, and with no reduction in rate of pay or benefits.

By order of May 26, 1964, the State of New York Public Service Commission approved the joint petition of Long Island Lighting Company and The Patchogue Electric Light Company for authority to consolidate into the former company as the surviving corporation.

Written notice of the application has been given to the Public Service Commission of the State of New York and to the Governor of that State. Notice has also been given by publication in the Federal Register on April 2, 1964 (29 F.R. 4755), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before April 14, 1964, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, Long Island, is the owner of facilities used for the transmission of electric energy generated outside the State of New York and consumed therein, which facilities are in addition to, and do not include facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter. Long Island is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, as described above, Long Island will acquire and merge or consolidate with its facilities subject to the jurisdiction of the Commission, all of the facilities of Patchogue, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of Patchogue's facilities by Long Island will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

(4) The period of public notice herein is reasonable.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of facilities of Patchogue by Long Island, all as described above, is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Long Island shall record the transaction herein authorized and the facilities and properties referred to above, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7161

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS AND PREFERRED STOCK

(Issued June 10, 1964)

Sierra Pacific Power Company (Applicant), incorporated under the laws of the State of Maine and qualified to do business as a foreign corporation in the States of California and Nevada, with its principal place of business in Reno, Nevada, filed an application on April 22, 1964, as amended May 8, 1964, for authorization pursuant to Section 204 of the Federal Power Act to issue and sell at competitive bidding, $7,000,000 Principal Amount of First Mortgage Bonds ----%, Series due June 1, 1994; and to issue and sell at competitive bidding, 100,000 shares of Preferred Stock, par value $50 per share.

Applicant proposes to issue the Bonds under its Indenture of Mortgage, dated as of December 1, 1940, and the Eighth Supplemental Indenture heretofore filed with the Commission and to be further supplemented and modified by a Ninth Supplemental Indenture to be dated as of June 1, 1964, to New England Merchants Bank of Boston and Fletcher C. Chamberlain, Successor Trustees.

The Applicant proposes to issue 100,000 shares of new Preferred Stock, Series B, par value $50 per share, total par value $5,000,000. The new Preferred Stock will be issued under and pursuant to the applicable provisions of the Applicant's by-laws, to be amended by an appropriate amendment thereto creating the new series and establishing its distinctive characteristics. The new Preferred Stock will be entitled to dividends when and as declared by the Board of Directors which dividends will be cumulative from June 1, 1964, and payable quarterly on March 1, June 1, September 1 and December 1 of each year.

Applicant further proposes, on or about June 17, 1964, to invite written bids for the purchase of the proposed Bonds and Preferred Stock.

Each bid, whether made by a single bidder or a group of bidders, must be for the purchase of all the Bonds or all the Preferred Stock, and must be in writing on the Form of Bid provided by the Applicant. Each bid for the Bonds must specify: (1) the coupon rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1%; (2) the price, exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be expressed as a percentage of the principal amount of the Bonds and shall not be less than 100% nor more than 102¾% thereof; and (3) that Applicant shall be paid the amount of accrued interest on the Bonds from June 1, 1964, to the date of payment thereof and delivery thereof. Each bid for the Preferred Stock must specify: (1) the dividend rate which shall be a multiple of $.04; and (2) the price to be paid to the Applicant, which price shall not be less than $50 nor more than $51.50 per share. Each bid for the Bonds and for the Preferred Stock must be accompanied by a certified check in the amount of $150,000.

Unless postponed, all bids for the purchase of the proposed Bonds or the Preferred Stock must be received by Applicant before 11:00 a.m. Boston time on Wednesday, June 24, 1964 at 49 Federal Street (8th Floor) Boston, Massachusetts. Unless Applicant rejects all bids for the proposed issuance of Bonds and all bids for the proposed issuance of Preferred Stock (which it reserves the right to do) or excludes a bid or bids for reasons specified in the invitation for Bids, it will accept the bid which provides it with the lowest cost of money to Applicant as defined in the bidding papers.

The Applicant proposes to apply and use the net proceeds to be obtained from the sale of the First Mortgage Bonds and Preferred Stock to retire bank loans totaling $6,800,000 (Docket No. E-7042) to reimburse the Treasury of Applicant for construction expenditures heretofore made and together with cash from operations, to carry out Applicant's construction programs contemplated and now in progress for 1964 and 1965. These programs jointly will require approximately $25,650,000 and provide for expenditures of approximately $19,393,800 for electric facilities, $4,193,200 for water facilities and $2,063,000 for gas facilities. Principal items in Applicant's electric program are: $4,700,000 in 1964 and $2,702,000 in 1965 for Tracy Steam Unit No. 2 (17 miles east of Reno); $216,000 in 1965 for Tracy Steam Unit No. 3; $204,000 in 1964 and $1,037,000 in 1965 for Geothermal Plant (20 miles east of Battle Mountain); $471,300 in 1964 for the purchase of Bolster Plant Site (6 miles north of Yerington); $100,000 in 1964 and $380,000 in 1965 for Tracy-Steamboat 120 kv line; $62,000 in 1964 for Buckeye-Tahoe Valley 120 kv line; $32,900 in 1964 for Mt. Rose Substation 120 kv additions; $314,900 in 1964 for Meyers 120 kv Substation and 14.4 kv feeders; $216,200 in 1964 for Tracy Substation additions and Wadsworth line; $40,000 in 1965 for Tracy-Winnemucca 120 kv Transmission Improvements; $140,000 in 1965 for Buckeye Substation; $288,000 in 1964 for Spanish Spring Substation.

Written notice of the application has been given to the Public Service Commission of Nevada and the Public Utilities Commission of California, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on May 5, 1964 (29 F.R. 5919), stating that any person desiring to be heard or to make any protest with reference to the application should on or before May 15, 1964, file a petition or protest with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued December 13, 1963, *Sierra Pacific Power Company*, Docket No. E-7134.

(2) The proposed issuance and sale of First Mortgage Bonds and the proposed issuance and sale of Preferred Stock, all as described above, will constitute issuances of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issues here involved are regulated by a State commission within the meaning of Section 204 (f) of the Act; and the proposed issuances of First Mortgage Bonds and Preferred Stock are therefore not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of First Mortgage Bonds and the proposed issuance and sale of Preferred Stock, all as hereinafter authorized will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of First Mortgage Bonds and the proposed issuance and sale of Preferred Stock, all as described above upon the terms and conditions and for the purposes specified in the application as amended are authorized subject to the provisions of this order.

(B) The proposed issuance and sale of First Mortgage Bonds and Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission shall have approved by a further order, the interest rate and the price to be received by Applicant for the proposed issuance of First Mortgage Bonds and the dividend rate and the price to be received by Applicant for the proposed issuance of Preferred Stock.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

GULF STATES UTILITIES COMPANY, AND CENTRAL LOUISIANA ELECTRIC COMPANY, INC., DOCKET NO. E-7162

ORDER AUTHORIZING DISPOSITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued June 10, 1964)

Gulf States Utilities Company (Gulf States), incorporated under the laws of the State of Texas and qualified to do business in the State of Louisiana, with its principal place of business at Beaumont, Texas, filed an application on April 23, 1964, as amended on May 12, 1964, for an order, pursuant to Section 203 of the Federal Power Act, authorizing the sale of certain electric transmission facilities to Central Louisiana Electric Company, Inc. On May 15, 1964, Central Louisiana Electric Company, Inc. (CLECO), joined in the application. CLECO is incorporated under the laws of the State of Louisiana, does business in that State, and maintains its principal business office at Alexandria, Louisiana.

Gulf States is engaged principally in the business of generating, distributing and selling electric energy in southeastern Texas and south central Louisiana. Gulf States sells electric energy at retail in 289 communities and surrounding territory; and sells for resale, electric energy to 11 municipal systems, 10 rural electric cooperatives and two other utilities. It also distributes natural gas in the City of Baton Rouge, Louisiana and vicinity. Gulf States had net plant of $461,222,000 as of December 31, 1963, and it received total operating revenues of $110,799,000 in the year 1963.

CLECO is engaged principally in the business of generating, distributing and selling electric energy in 127 communities in 21 parishes in central Louisiana. CLECO also distributes natural gas and water in portions of its electric service area. It has net plant of $89,216,000 as of December 31, 1963, and it received total operating revenues of $25,278,000 in the year 1963.

Gulf States proposes to sell and CLECO proposes to acquire two short sections of 69 kv electric transmission line. One section of 69 kv electric transmission line (Gulf States No. 263) is a 3.68 mile portion of a tieline between Gulf States and CLECO extending southerly from CLECO's existing 69 kv metering station to Gulf States Riverside power generating station at Westlake, Louisiana. Another 2.72 mile section of 69 kv line (Gulf States No. 264) branches off of the above line to a substation near DeQuincy, Louisiana. The portion of Gulf States No. 263 to be transferred constitutes a portion of the transmission line used for the interchange of electric power between Gulf States and CLECO at a point near DeQuincy, Louisiana. Gulf States No. 264, which is to be transferred, has been used by Gulf States for the sale of electric power of wholesale to the Beauregard Electric Cooperative, Inc., at a point of delivery near DeQuincy, Louisiana. After the transfer of the facilities, said facilities will continue to be used for the same purposes but there will be a new metering point for the interchange of power between Gulf States and CLECO, and CLECO will serve Beauregard Electric Cooperative at wholesale. According to the application, such service will be at the same rate, terms and conditions existing under the present contract between Gulf States and Beauregard Electric Cooperative, which expires July 1, 1965 which will be assigned to CLECO.

CLECO states that it owns and operates the electric facilities in the City of DeQuincy, Louisiana near the metering point and has manpower and equipment available there which will enable better service to the Cooperative. Gulf States has no other customers or distribution facilities near DeQuincy.

The transmission facilities are to be transferred from Gulf States to CLECO for a cash consideration of $57,065, as of December 31, 1963 subject to adjustment for additional depreciation to the date of closing. The consideration as of April 30, 1964, would have been $56,583. The consideration of $57,065, as of December 31, 1963 was $5,978 less than net plant of $63,943, as of the same date and represents a deficiency in the provision for depreciation previously applied to the facilities.

Gulf States, as of December 31, 1963, would have recorded the disposition of the transmission facilities by a debit of $57,065 to Account No. 131, Cash; a debit of $13,198 to Account No. 108, Accumulated Provision for Depreciation of Electric Plant In Service; a debit of $5,978 to Account 435, Miscellaneous Debits to Surplus; and an offsetting credit of $76,241 to Account No. 101, Electric Plant In Service—Transmission Plant.

CLECO, as of December 31, 1963, would have recorded the acquisition of the transmission facilities by a debit of $76,241 to Account No. 101, Electric Plant In Service—Transmission Plant; and offsetting credits of $19,176 to Account No. 108, Accumulated Provision for Depreciation of Electric Plant in Service and $57,065 to Account 131, Cash.

Written notice of the application has been given to the Louisiana Public Service Commission, the Texas Railroad Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on May 15, 1964 (29 F.R. 6419), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before May 27, 1964 with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Gulf States, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued December 20, 1962, *Gulf States Utilities Company*, Docket No. E-7074 (28 FPC 1077).

(2) CLECO, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commisssion as heretofore described and set forth in the Commission's order issued July 8, 1955, *Gulf States Utilities Company and Central Louisiana Electric Company, Inc.*, Docket No. E-6622 (14 FPC 846).

(3) By the proposed transaction, Gulf States will dispose of a portion of its facilities subject to the jurisdiction of this Commission which have a value in excess of $50,000 and CLECO, in acquiring such facilities will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Gulf States, another person, all within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed disposition of facilities by Gulf States and the proposed acquisition or merger and consolidation of such facilities by CLECO, all as described above will be consistent with the public interest as described in Section 203 of the Federal Power Act.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The disposition of facilities by Gulf States and the acquisition and merger or consolidation of such facilities by CLECO, all as described above, be and the same hereby are authorized and approved upon the terms and conditions set forth in the application of Gulf as joined in by CLECO, subject to the provisions of this order.

(B) Gulf States and CLECO shall account for the proposed transaction in the manner described above and in accordance with the provisions of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions hereby authorized and approved are consummated within 90 days from the issuance of this order.

(D) The foregoing authorization and approval shall be without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service accounts, valuations, estimates, or determinations of cost, or any other matter whatsoever which may come before this Commission or any other regulatory body, and nothing in this order shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G-11217, G-14115*, G-18417*, G-18418*, G-13734*, G-15314*, G-15315*, G-18206*, G-18207*, AND G-18215*

ORDER DENYING APPLICATION FOR REHEARING

(Issued June 10, 1964)

Phillips Petroleum Company (Phillips) on May 1, 1964, filed an application for rehearing of the Commission's order issued April 3, 1964, in the above-entitled proceedings. By that order we accepted for filing certain decreased rates which we found reflected the current contractual effect on its spiral-escalation and favored-nation rates of the El Paso Natural Gas Company (El Paso) rate settlement in Docket No. G-4769, *et al.* approved by our order issued December 4, 1963. We also required Phillips to refund to El Paso all amounts collected subject to refund in excess of the tendered decreased rates, together with simple interest from the date of receipt of such amounts by Phillips to the date of refund.

Phillips contends, among other things, that the Commission erred in requiring it to make refunds "with interest to the date of refund." Phillips claims that the interest obligation should be terminated as of February 28, 1964, because of Phillips' tender to El Paso on February 24, 1964, of principal and interest, which was refused by El Paso.

Upon approval of the El Paso rate settlement, Phillips requested El Paso to furnish its calculation of the refund due, and on February 11, 1964, El Paso furnished such calculations. By letters dated February 24, 1964, Phillips tendered to El Paso two checks in the amounts shown by the El Paso calculations. Accompanying each check were two letters with provision for acknowledgment by El Paso. The first check in the amount of $5,276,660.48 and the accompanying letter stated: "This check constitutes the refund of principal and interest computed by El Paso set forth in the tabulation transmitted to me by Mr. M. C. Norwood's letter of February 11, 1964, with respect to Docket Nos. G-11217, G-14115, G-18417 and G-18418. This check is in the amount set forth in said tabulation and covers the total refund to El Paso for the time periods as set forth therein under such dockets." The second letter set forth recomputed rates under each of the dockets set forth in the first letter and provided: "It is agreed that the rates set forth above under the heading "Recomputed Rates" constitute the proper contract rates inclusive of applicable tax reimbursement." Similar letters accompanied a refund of $35,005.84 under other rate schedules involved in Docket Nos. G-13734, G-15314, G-15315, G-18206, G-18207, and G-18215. El Paso refused to execute the acknowledgments made a part of the letters or to accept the checks tendered therewith.

Phillips argues, in effect, that El Paso having furnished the calculations on which the tendered refund was based and the Commission ultimately approving the tendered amount as a proper calculation of the refund amounts, the tender of that amount terminates Phillips' interest obligation. Phillips further argues that the Commission has no function to perform under the Natural Gas Act since it may only permit refunds under the contracts and cannot change Phillips' obligations. While it is correct that the contractual

---

*These proceedings are consolidated in Docket No. AR61-1, *et al.*

provisions determine the amount of the refunds, such refunds are being made under Section 4(e) proceedings before the Commission and the amounts thereof must be approved in those proceedings, and Phillips cannot foreclose Commission determination through prior tenders.

We agree that a seller in a situation like Phillips found itself must have a vehicle for eliminating unnecessary running of interest. This it could have done by tendering payment to El Paso in a manner which clearly would not have forestalled the buyer's rights to secure greater amounts should the Commission so determine. See our order issued in *Trunkline Gas Company* v. *The Superior Oil Company*, Docket No. RI64–273, *et al., Supra*, p. 1511. But we think the clear import of the language of the Phillips' letters of February 24 was that the acceptance by El Paso of the tendered checks would finally determine the applicable rates under the various dockets therein referred to and the total refund dollars due to El Paso under those Commission proceedings. In these circumstances El Paso properly refused to accept the refunds on the tendered basis as an attempt to foreclose Commission determination of the proper calculation of refunds, and the alleged tender did not terminate Phillips' interest obligations.

Phillips also questions our refusal to terminate these Section 4(e) cases because further refunds may be required as a contractual matter. Phillips admits that the rates in these proceedings, with the exception of Docket No. G–11217, are subject to a determination as to their justness and reasonableness under Section 4(e). As Phillips also points out, the order complained of does not at this time undertake to require any further refunds. We therefore consider it appropriate to defer action on these matters.

The Commission finds:

The application for rehearing filed by Phillips on May 1, 1964, in the above-entitled proceedings sets forth no new facts or legal considerations which were not fully considered prior to the issuance of the April 3 order, or which now having been considered, warrant modification of said order.

The Commission orders:

The application for rehearing filed by Phillips on May 1, 1964, in the above-entitled proceedings is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–13018; EL PASO NATURAL GAS COMPANY, DOCKET NO. G–13019

ORDER DENYING PETITION TO SET ASIDE ORDER ISSUING TEMPORARY AUTHORIZATION

(Issued June 10, 1964)

On May 4, 1964, the People of the State of California (California) petitioned to set aside this Commission's order of July 2, 1962, issuing temporary authorization to El Paso Natural Gas Company (El Paso) to operate the facilities of its Pacific Northwest Division, formerly the facilities of Pacific Northwest Pipeline Corporation (Pacific). California argues that as a result of the decisions of the United States Supreme Court in *United States* v. *El Paso Natural Gas Company*, 376 U.S. 651, No. 94, October Term, 1963, decided April 6, 1964, and *California* v. *Federal Power Commission*, 369 U.S. 482

(1962), the issuance of the temporary authorization was an abuse of the Commission's discretion and should be set aside. California further requests that the Commission require that El Paso file and serve upon all of the parties to these proceedings such plan or plans as it may have to comply with the directive of the Supreme Court in *United States* v. *El Paso Natural Gas Company*, *supra*, and that the Commission "exert its jurisdiction in the matter of divestiture to the end that there shall not be imposed upon any of the customers of ratepayers of El Paso any financial costs, burdens, charges or expenses of any kind which should be borne by El Paso's stockholders."

The divestiture ordered by the Supreme Court has not yet been consummated. Until such time as a new corporation is created capable of serving the Pacific Northwest area, as contemplated by the Court, service to the consumers in that area must be maintained. Section 7(c) of the Natural Gas Act provides that "the Commission may issue a temporary certificate in cases of emergency, to assure maintenance of adequate service or to serve particular customers, without notice or hearing, pending the determination of an application for a certificate." Under the decision in *California* v. *Federal Power Commission*, *supra*, further action by this Commission was to await the decision of the courts in the Clayton Act proceeding pending in the United States District Court for the District of Utah. Accordingly our further action in this matter was stayed. In the meantime, public interest dictated that service to the Pacific Northwest area be maintained. The action which California seeks would result in the existing active transmission company in that area, El Paso, being legally divested of authority to serve the area and would create a hiatus in the continuity of service. No valid public interest would be served by this action. We shall, of course, take action at the earliest possible moment to assure that, in accordance with the Court's decision, service is continued in the area by a legally constituted natural gas company capable of rendering the service at proper rates.

As to the request that we order El Paso to serve any proposed plans of divestiture upon all parties to the proceeding, at this time the matter is properly before the District Court for its initial determination. Such action as California would have us take would be improper. However, by our letter order dated October 11, 1962, we required that El Paso maintain existing service on its Pacific Northwest Division under the existing temporary authorization until further order of the Commission, subject to certain conditions, including a requirement that it file a comprehensive statement setting forth (a) the changes in operation which took place in the Pacific Northwest part of its system as a result of the merger of the companies; (b) the additions to the Pacific Northwest part of the system since the merger; and (c) those gas purchase contracts made subsequent to the merger which are or will be utilized to provide gas to customers on the Pacific Northwest portion of its system. We deem it advisable that El Paso should now present an up-to-date picture of these items and will, accordingly, order that this be done at this time.

The Commission orders:

(1) California's petition to set aside the Commission's order issuing temporary authorization is hereby denied.

(2) El Paso shall submit to the Commission within thirty days a comprehensive statement setting forth (a) any changes in operation which took place in the Pacific Northwest part of its system as a result of the merger in addition to those changes previously reported by El Paso in response to our letter order of October 11, 1962; (b) the additions to the Pacific Northwest

portion part of the system since the merger, other than those previously reported in response to the October 11, 1962, letter order; and (c) those gas purchase contracts made subsequent to the merger which are or will be utilized to provide gas to customers on the Pacific Northwest portion of its system, other than those previously reported in response to the October 11, 1962, letter order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

J. WES JOHNSON, D/B/A TOWER OIL AND GAS COMPANY OF TEXAS, DOCKET NO. G-18852; W. A. MOREL (OPERATOR), ET AL, (SUCCESSOR TO J. WES JOHNSON, D/B/A TOWER OIL & GAS COMPANY OF TEXAS), DOCKET NO. CI64-867; J. WES JOHNSON, D/B/A TOWER OIL & GAS COMPANY OF TEXAS, JEANNE KERBS, AND W. A. MOREL (OPERATOR), ET AL., DOCKET NO. RI60-276[1]

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AMENDING ORDER ISSUING CERTIFICATE, MAKING SUCCESSOR IN INTEREST CO-RESPONDENT, REDESIGNATING PROCEEDING, ACCEPTING FPC GAS RATE SCHEDULE FOR FILING, AND ACCEPTING AGREEMENT AND UNDERTAKING FOR FILING

(Issued June 10, 1964)

On February 3, 1964, W. A. Morel (Operator), *et al.* (Applicant) filed in Docket No. CI64-867 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce for resale to El Paso Natural Gas Company from the Spraberry Field, Reagan County, Texas, all as more fully set forth in the application.

Applicant proposes to continue in part the sale initiated by J. Wes Johnson, d/b/a Tower Oil & Gas Company of Texas, which was authorized in Docket No. G-18852.

Applicant proposes to sell natural gas pursuant to a contract dated May 1, 1959, as supplemented and amended, which has heretofore been designated as J. Wes Johnson, d/b/a, Tower Oil & Gas Company of Texas, FPC Gas Rate Schedule No. 1 and which will also be designated as a rate schedule of Applicant. The rate proposed to be collected by Applicant under said contract is in effect subject to refund in Docket No. RI60-276. Applicant has requested to be made a co-respondent in said proceeding and has filed an agreement and undertaking to assure the refund of any amounts collected above the amount found to be just and reasonable in said proceeding.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed. As pointed out by the dissenting statement to this order, the contract for this sale, which was executed on May 1, 1959, contains indefinite escalations of the type proscribed by Section 154.93 of our regulations for contracts executed after April 2, 1962. However, these regulations would not apply to the contract presented to us by this application, which was executed prior to April 2, 1962, and is not affected by the succession of a new seller. We believe this application is covered by the policy announced in the *Graridge* case, Opinion No. 408, issued October 31, 1963, 30 FPC 1156, of placing the successor in the same position as the predecessor. For the reasons set forth therein, we believe it would not be in the public interest to use the occasion of a routine succession transaction to work a fundamental change in the underlying contract.

---

[1] Consolidated with Docket No. AR61-1.

At a hearing held on June 3, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, W. A. Morel (Operator), *et al.*, will be engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and therefore will be a "natural-gas company" within the meaning of the Natural Gas Act upon the commencement of service authorized herein.

(2) The sale of natural gas as hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should be joined as a co-respondent in the rate proceeding pending in Docket No. RI60–276, that said proceeding should be redesignated accordingly, and that the agreement and undertaking submitted by Applicant should be accepted for filing.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity in Docket No. G–18852 to J. Wes Johnson, d/b/a Tower Oil & Gas Company of Texas, should be amended by deleting therefrom authorization to sell natural gas from the properties assigned to Applicant.

(7) The contract dated May 1, 1959, as supplemented and amended, heretofore designated as J. Wes Johnson, d/b/a Tower Oil & Gas Company of Texas, FPC Gas Rate Schedule No. 1, should also be designated as an FPC gas rate schedule of Applicant.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural

Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(D) Applicant be and it is hereby joined as a co-respondent with J. Wes Johnson, d/b/a Tower Oil & Gas Company of Texas, and Jeanne Kerbs in the pending rate proceeding in Docket No. RI60-276; said proceeding is redesignated accordingly; the agreement and undertaking submitted by Applicant in said proceeding to assure refund of any amounts collected above the amount found to be just and reasonable in said proceeding be and it is hereby accepted for filing, provided, however, that said agreement and undertaking shall be applicable only to sales made by Applicant on and after June 1, 1963, from the properties assigned to Applicant by J. Wes Johnson, d/b/a Tower Oil & Gas Company of Texas.

(E) Applicant shall comply with the refunding and reporting procedure required by the Natural Gas Act and Section 154.102 of the Regulations thereunder, and Applicant's agreement and undertaking filed in Docket No. RI60-276 shall remain in full force and effect until discharged by the Commission.

(F) The order issuing a certificate of public convenience and necessity in Docket No. G-18852 be and it is hereby amended by deleting therefrom authorization to sell natural gas from the properties assigned to Applicant, and in all other respects said order shall remain in full force and effect.

(G) The following contract, as supplemented and amended, is accepted for filing as an FPC gas rate schedule of Applicant, effective June 1, 1963, and is designated as follows:

Description and date of instrument	Rate schedule	Supplement
Contract 5-1-59	1	------------
Amendatory agreement 10-26-59	1	1
Supplemental agreement 2-16-60	1	2
Change in rate 3-25-60	1	3
Letter 10-8-63	1	4

Commissioner Black *dissenting*.

BLACK, Commissioner, *dissenting:*

The contracts which constitute the rate schedules of applicant's predecessors in interest contain indefinite price escalation clauses which this Commission has unanimously found "to be contrary to the public interest"[1] and "incompatible with a scheme of effective rate regulation."[2] I dissent to the Commission's action in issuing new, unconditioned certificates in these dockets which permit the retention of the indefinite price escalation clauses.

---

[1] Re *Pure Oil Co.*, 25 FPC 383, 388; aff'd 299 F. 2d 370.

The problem here is analogous to an issue raised in the *Graridge* case.[3] I dissented to the majority's decision there, that the scope of review open to the Commission in a so-called successor proceeding was different than that required in any Section 7 certificate case. The Commission in *Graridge* held *inter alia* that price was not an issue in a successor certificate application and decided in effect that our examination should be limited to the very narrow consideration of the successor's personal identity and qualifications. The result reached in this case represents, I suppose, the logical extension of the *Graridge* rationale. There the ruling was that the successor was entitled to the price being *collected* by the predecessor. We are here faced with the question as to the factors which the Commission will permit to effect a *future* price increase.

This Commission has unequivocally renounced the use of indefinite escalation clauses as being totally inconsistent with the public interest. The Supreme Court has recently upheld our authority to reject such clauses.[4] The majority's action in issuing new, unconditioned certificates in these dockets is most unfortunate when we are presented with the clear opportunity to do otherwise.

Commissioner Ross authorized me to state that he joins in this statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 522

ORDER ACCEPTING SURRENDER OF LICENSE (TRANSMISSION LINE)

(Issued June 10, 1964)

Application was filed on June 25, 1963, by Southern California Edison Company, licensee for transmission line Project No. 522, for Commission approval of surrender of the license for the transmission line affecting lands of the United States in Kern County, California.

The subject line, which is an 11,000 volt line known as "Goldtown Electric Distribution Line", extends from a point in the NW¼NW¼, Sec. 32, T. 11 N., R. 12 W., San Bernardino Base and Meridian, to a point in the NE¼-NE¼ of said section. Transmission line Project No. 522 also included as a part of the project works a substation, known as "Goldtown Substation", located at the SW¼SW¼ of the section. The application states that the substation has been abandoned.

The 11 kv line of Project No. 522 is used to distribute power which it receives by means of step-down facilities from Applicant's 69 kv system. Consequently, the line is a distribution facility.

The Bureau of Land Management, Department of the Interior, has issued an easement (Serial No. LA-0170976) to the licensee for the line on lands of the United States for a period of 50 years, effective as of April 15, 1963.

Annual charges under the license for the line have been paid through December 31, 1963, and the license instrument has been returned.

---

[2] Docket R-203, 27 FPC 339, 340 (Commissioner O'Connor not participating).

[3] *Graridge Corp., (Operator), et al.,* Docket No. G-19246, *et al.,* Opinion No. 408 issued October 31, 1963, 30 FPC 1156.

[4] *F.P.C. v. Texaco,* 377 U.S. 33 (1964).

The Commission finds:

(1) The subject transmission line is not a primary line nor part of a "project" as defined in Section 3(11) of the Federal Power Act.

(2) Acceptance of surrender of the license for the line is appropriate.

The Commission orders:

Surrender of the license for transmission line Project No. 522 is hereby accepted, effective as of December 31, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TENNECO OIL COMPANY,[1] DOCKET NO. RI63-433

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued June 10, 1964)

On April 29, 1964, Tenneco Oil Company (Tenneco)submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Texas Eastern Transmission Corporation (TETC). The offer relates to sales made under Tenneco's FPC Gas Rate Schedule Nos. 101, 111, 112 and 113 in Texas and Louisiana. The proposed increased rates were suspended by order of the Commission until October 10, 1963. Tenneco has not filed the required motion to make the proposed increased rates effective.

Under the terms of the offer, Tenneco proposes to eliminate the favored-nation clauses and the present periodic escalation provisions from its rate schedules and to establish the rates set forth on the Appendix hereto. Tenneco also proposes to limit future periodic escalations to 1.0¢ per Mcf on November 1, 1968, and each five year period thereafter.

The proposed settlement is consistent with the provisions of the Second and Seventh Amendments to the Commission's Statement of General Policy No. 61-1, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Tenneco's offer of settlement shall not be construed as constituting approval of any future rate increases that may be filed under the subject rate schedules and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Tenneco's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Tenneco on April 29, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Tenneco on April 29, 1964, is hereby approved in accordance with the provisions of this order.

(B) Tenneco shall file within 30 days from the date of issuance of this order, notices of change in rate providing for the rates specified in its offer of settlement as set forth in the Appendix hereto, and executed contractual amendments to its FPC Gas Rate Schedules Nos. 101, 111, 112 and 113, eliminating the favored-nation clauses, and the present periodic escalation provisions therefrom and substituting therefor periodic escalations as specified in its offer of settlement. The notice of change and contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

---

[1] Successor to Tenneco Corporation

(C) Upon notification by the Secretary of the Commission that Tenneco has compiled with the terms and conditions of the order, the rates and charges, specified in its offer of settlement, and set forth on the Appendix hereto, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated.

(D) The acceptance by the Commission of Tenneco's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Tenneco including area rate or other similar proceedings.

APPENDIX

TENNECO OIL COMPANY, DOCKET NO. RI63-433

FPC gas rate schedule designation	Field, county, and State	Supplement no.	Rates (including tax reimbursement)	
			Filed	Proposed settlement
101	Bethany-Longstreet Field, Caddo & DeSoto, Louisiana	9	*15.75¢ 16.6212¢	[1] 16.3654¢
111	Bethany-Longstreet Field, Caddo & DeSoto, Louisiana	7	*15.75¢ 16.6212¢	[1] 16.3654¢
112	Waskom Field, Harrison, Texas	2	*14.0¢ 15.4¢	14.6¢
113	Bethany-Longstreet Field, Caddo & DeSoto, Louisiana	6	*15.185¢ 16.6212¢	[1] 16.3654¢

*Last effective approved rate; presently being collected without refund obligation.

[1] Includes 1.75¢ per Mcf tax reimbursement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

UNITED FUEL GAS COMPANY (SUCCESSOR TO AMERE GAS UTILITIES COMPANY AND ATLANTIC SEABOARD CORPORATION), DOCKET NO. CP60-123; ASHLAND OIL & REFINING COMPANY (SUCCESSOR TO UNITED CARBON COMPANY AND UNITED PRODUCING COMPANY, INC.), DOCKET NO. CI60-493

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 11, 1964)

On June 14, 1960, as amended on November 27, 1962, and May 20, 1963, Amere Gas Utilities Company (Amere) and Atlantic Seaboard Corporation (Atlantic) (now United Fuel Gas Company) filed in Docket No. CP60-123 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 16.5 miles of 10.75-inch gas transmission pipeline and necessary measuring and regulating facilities, and one 800 horsepower compressor unit with appurtenant facilities to enable Amere to receive natural gas to be purchased from Ashland Oil & Refining Company (Ashland) (formerly United Producing Company, Inc.) in the Beckley-Mullins area, West Virginia, and requesting permission and approval for the abandonment of the exchange of natural gas between Amere and Atlantic, all as more fully set forth in said application and amendments.

Temporary certificate authorizations pursuant to the application and amendments in Docket No. CP60-123 were granted on August 10, 1960, and January 4 and August 8, 1963.

On November 21, 1963, United Fuel Gas Company (United Fuel) filed in said Docket No. CP60-123 an application and petition to be substituted for Amere and Atlantic as Applicant for permanent certificate and as holder of temporary certification in said Docket, stating that effective September 30, 1963, United Fuel acquired by merger all interests of Amere and acquired by purchase those interests of Atlantic which were involved in the original application in Docket No. CP60-123. This merger and acquisition were approved by the Commission in its Opinion No. 377 and accompanying order issued January 16, 1963, in Docket No. CP61-107. So much of the original application in Docket No. CP60-123 as requested approval of the abandonment of the exchange of natural gas is rendered moot by this merger and acquisition.

On April 20, 1960, as amended on June 22, 1962, United Producing Company, Inc. (United Producing) (predecessor of Ashland) filed in Docket No. CI60-493 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Amere Gas Utilities Company (now United Fuel Gas Company) from acreage in Kanawha, Fayette, Raleigh and Boone Counties, West Virginia, all as more fully set forth in the application and amendment in said Docket No. CI60-493. Temporary certificate authorizations were granted to United Producing for these services on August 10, 1960, and August 14, 1962.

On January 14, 1963, Ashland Oil & Refining Company and United Carbon Company, jointly, filed an application for certificate authorization "to continue the sale of gas now made by others and motion to be substituted as a party to certain proceedings on applications for certificates of public convenience and necessity." Among the certificate dockets included under this joint application was the pending application of United Producing Company, Inc. in Docket No. CI60-493. United Carbon and Ashland were granted temporary certificate authorization pursuant to said application by letter dated February 8, 1963.

It appears that United Producing was merged into United Carbon Company on February 19, 1963, and that on March 1, 1963, Ashland acquired by purchase all interests of United Carbon, including those involved in the application in Docket No. CI60-493. United Carbon, by letter dated February 25, 1963, advised that it was willing to accept a permanent certificate in said docket at a rate of 28.0¢ per Mcf at 15.325 psia. The related rate schedule, at that time United Carbon Company FPC Gas Rate Schedule No. 63, as supplemented, (formerly United Producing Company, Inc. FPC Gas Rate Schedule No. 36, as supplemented), is now Ashland Oil & Refining Company FPC Gas Rate Schedule No. 140, as supplemented.

The Public Service Commission of West Virginia filed interventions in 1960 in both Docket Nos. CP60-123 and CI60-493 but later advised that its objections would be removed by the merger of Amere into United Fuel and the acquisition of Atlantic's interests by United Fuel.

Due notice of the subject applications has been given by publication in the Federal Register on May 5, 1964 (29 F.R. 5920). No protest, petition to intervene or request for hearing has been filed.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, amendments and exhibits thereto, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-341 (4 FPC 534).

(2) Applicant, Ashland Oil & Refining Company, a Kentucky corporation having its principal place of business in Ashland, Kentucky, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(3) The facilities hereinbefore described, as more fully described in the application and amendments in Docket No. CP60-123, are used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the continued operation thereof by United is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The continued operation of the subject facilities by United is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The sale of natural gas by Ashland hereinbefore described, as more fully described in the application and amendment in Docket No. CI60-493, is being made in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and the continuation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The continuation of the subject sale of natural gas by Ashland, together with the continued operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Applicants, United and Ashland, are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate hereinafter issued to United in Docket No. CP60-123 and the rights granted thereunder be conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to United Fuel Gas Company in Docket No. CP60-123 and to Ashland Oil & Refining Company in Docket No. CI60-493, respectively, authorizing the continued operation of facilities and transportation of natural gas by United, and the continued sale of natural gas for resale by Ashland, together with the continued operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore set forth and as more fully set forth in the applications and amendments in the respective dockets in this proceeding.

(B) The certificate issued to United by paragraph (A) above and the rights granted thereunder are conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

(C) The certificate issued to Ashland by paragraph (A) above is not transferable and shall be effective only so long as Ashland continues the acts or operations hereby authorized, in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(D) The grant of the certificate issued to Ashland by paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Ashland. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of said contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(E) Ashland Oil & Refining Company is hereby directed to submit an amendment to the contract comprising its FPC Gas Rate Schedule No. 140 providing for a rate of 28.0¢ per Mcf at 15.325 psia, inclusive of gathering charges, from June 1, 1964, to the end of the initial pricing period, and to file an appropriate related notice of change in rate.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-239

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 11, 1964)

On April 14, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-239 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of four main line taps and two measuring and regulating stations to be located at various points along its existing pipeline system, and the sale and delivery of additional natural gas to four existing customers in Arizona, New Mexico, Idaho and Washington[1] through the proposed facilities, for distribution and resale, all as more fully set forth in the application.

The estimated total cost of the proposed facilities is $13,400, which will be financed from current funds, supplemented by short term bank loans.

The estimated additional sales to the four customers during the fifth full year of service through the facilities described are 140,239 Mcf annually and 1,188 Mcf daily.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the related transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issue hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the gen-

[1] Southern Union Gas Company, Arizona Public Service Company and Washingt Natural Gas Company.

eral terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12-months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward and David S. Black.

UTAH POWER & LIGHT COMPANY, DOCKET NO. E–7130

ORDER GRANTING REHEARING, VACATING ORDER, AND DISMISSING PETITION FOR DECLARATORY ORDER

(Issued June 11, 1964)

The Utah Power & Light Company (Applicant) on May 15, 1964, filed an application for rehearing upon the declaratory order issued on April 17, 1964, requiring it to apply for a license on its Pioneer project on the Ogden River at Ogden, Utah.

In its application for rehearing, the Applicant contends, among other things, that the Commission's finding that the Pioneer project of the Company utilizes surplus water or water power from a Government dam (which was based on the statement in Applicant's original petition that "power . . . water is delivered from the Pine View Dam") is not based on substantial evidence, is contrary to fact, was made without due process of law, and can only be made as a decision based on a full and complete record of hearing.

We had assumed that the Petition for a declaratory order filed by Applicant on October 11, 1963, was filed pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure which provides that the petition shall include a complete statement of the facts. In view of the statements in the application for rehearing it now appears that the petition for a declaratory order does not qualify under said section 1.7(c), and the petition should be dismissed.

An order may be entered in a separate proceeding instituting an investigation, under the Federal Power Act and the Commission's Regulations, to determine the jurisdictional status of Applicant's Pioneer project.

The Commission finds:

It is appropriate and in the public interest in administering the Federal Power Act that the Utah Power & Light Company's application for rehearing be granted, that the order issued on April 17, 1964, be vacated, and that the petition for a declaratory order be dismissed as hereinafter provided.

The Commission orders:

(A) The Utah Power & Light Company's application filed on May 15, 1964, for rehearing of the order issued on April 17, 1964, is hereby granted.

(B) The Commission's order issued April 17, 1964, is vacated, and the petition for declaratory order in Docket No. E–7130 is dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64-9

ORDER ON QUESTION CERTIFIED BY THE PRESIDING EXAMINER

(Issued June 11, 1964)

On May 25, 1964, the Presiding Examiner certified to the Commission for its determination a question involving the relationship of Continental Gas Producing Company (Continental), formerly Cities Service Gas Producing Company, to the proceedings in this docket. This question was certified after the conclusion of the prehearing conference, during which certain interveners had presented the Examiner with an application for the issuance of a *subpoena duces tecum* directed to Cities Service Gas Company, requiring that company to supply, *inter alia*, certain books and records of Cities Service Gas Producing Company.[1] The applicants for the subpoena state that due to affiliation [which existed during the test period] between Cities Service Gas Company and its supplier, Cities Service Gas Producing Company,[2] it is relevant and material to inquire into the terms of the alleged transaction by which the Cities Service Company had sold its stock interest in the former Cities Service Gas Producing Company.

The Examiner indicated at the conference that he could neither direct a subpoena to Cities Service Gas Company, requiring it to submit the books and records of another company, nor could he direct the subpoena to a person (*i.e.*, Cities Service Gas Producing Company, now Continental Gas Producing Company) not before him as a party to the proceeding. He further stated that if Continental were to be joined as a party, that was a matter for the Commission. And in certifying the question, the Examiner seeks guidance as to whether matters relating to the producing company should be inquired into in the pipeline rate case.

While we express no opinion as to the proper ratemaking effect to be given to the relationship between Cities Service Gas Company and Continental, it appears that this relationship, and hence the information sought by the applicants for the subpoena may be relevant to a proper determination of just and reasonable rates for Cities Service Gas Company. We further note that neither Section 14 of the Natural Gas Act, which authorizes the issuance of subpoenas, nor Section 1.23 of the Commission's Rules of Practice and Procedure, which implements this authorization, make joinder as a party to the proceeding of the person to whom the subpoena is directed a prerequisite to the issuance of the subpoena. We therefore find that the Examiner had ample authority to grant the application presented to him at the prehearing conference.

We note that the application for the subpoena has been withdrawn in view of the fact that certain of the material requested therein is either a matter of public record or is being supplied, voluntarily, by Cities Service Gas Company. The applicants have indicated, however, their intent to submit a new application for the remainder of the material originally sought. Accordingly, we hereby direct the Examiner to consider any further application for subpoena on its merits, without regard to the status as a party to the hearing of the person to whom the subpoena is sought to be directed.

---

[1] At the time the application for subpoena was presented, May 8, 1964, the Commission had not acted upon the application of Continental to amend the certificate of public convenience and necessity previously issued to Cities Service Gas Producing Company by reflecting the change in name. Thereafter, by order issued May 18, 1964, the Commission amended the certificate as requested with the reservation that such action would not "prejudice any future decision with respect to the proper costs to be included in the cost of service for the purchase of natural gas from said properties by Cities Service Gas Company."

[2] Both companies were 100% subsidiaries of a common parent, Cities Service Company.

In view of the fact that Continental Gas Producing Company may have been unaware of its possible interest in this proceeding at the time when petitions to intervene herein were due to be filed, the Commission will permit the late filing of such a petition, should Continental wish to become a party.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

LOUISIANA NEVADA TRANSIT COMPANY, DOCKET NO. CP64-202

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 11, 1964)

On March 12, 1964, Louisiana Nevada Transit Company (Applicant) filed in Docket No. CP64-202 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing May 1, 1964, and the operation of minor facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The total cost of the proposed facilities will not exceed a maximum of $200,000, and no single project will exceed a cost of $50,000, which costs will be financed from cash on hand.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas adjacent to said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Louisiana Nevada Transit Company, a Nevada corporation having its principal place of business in Ada, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 20, 1942, in Docket No. G-246 (3 FPC 837).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are

subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 1, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $200,000, with no single project to exceed a cost of $50,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Louisiana Nevada Transit Company, to construct during the 12-month period commencing May 1, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing May 1, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $200,000, with no single project to exceed a cost of $50,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended, be granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

COMMISSION LETTER ORDER OF OCTOBER 30, 1963, DIRECTING RESPONSES TO TWO QUESTIONNAIRES:

(I) SUMMARY LISTS OF RESPONDENT'S (1) GAS AND OIL PRODUCTION AND (2) FIELD AND CYCLING PLANTS BY PRICING AREAS—YEAR 1962 AND

(II) COSTS AND STATISTICS PERTAINING TO OIL AND GAS PRODUCTION, EXPLORATION, GAS SYSTEMS, AND FIELD GASOLINE AND CYCLING PLANT OPERATIONS—YEAR 1962

ORDER FURTHER MODIFYING LETTER ORDER REQUIRING FURNISHING OF DATA

(Issued June 12, 1964)

By letter order of October 30, 1963, 30 FPC 1155, as modified, the Commission directed 116 (since reduced to 92) of the largest natural gas producers to complete a questionnaire covering all of the Commission's pricing areas. Responses to the first portion of the modified all-areas questionnaire were required to be filed no later than April 30; responses to subsequent portions are due no later than July 31, August 31, and October 31, 1964. By order of January 9, 1964, reporting requirements for certain items were suspended indefinitely.

A majority of the respondents have filed their responses to the portion of the questionnaire due April 30. (Others have sought and received extensions of time to complete their responses.) A number of respondents, in conjunction with their April 30 filings, have renewed previous general requests that we reduce or defer the reporting requirements for the later-due portions of the questionnaire. We have considered respondents' requests in light of our further study of the timetable for area rate proceedings now under way and our goals for additional proceedings which may employ the questionnaire data which are not yet due.

Our review has identified a number of items of information pertaining to area trends and to gasoline plants and gas systems which can be deferred without delaying hearing or decision in any area rate proceedings. (1) With regard to area trend data, our order of January 9 has already deferred reporting of trends for areas other than the Permian Basin, Southern Louisiana, Hugoton-Anadarko, and Texas Gulf Coast areas. Upon further consideration we will also defer reporting for the Permian Basin and Southern Louisiana areas. For the time being we will confine area trend reporting to the Hugoton-Anadarko and Texas Gulf Coast areas. (2) We will also confine the reporting of gasoline plants and gas systems data to the Hugoton-Anadarko and Texas Gulf Coast areas; reporting of plant data for other areas can be deferred until we are closer to the commencement date for particular proceedings.

The appendix to this order lists the items remaining to be reported together with due dates.

The Commission orders:

(A) Data required by the following questionnaire schedules and sheets, previously required to be reported on or before October 31, 1964, should not be reported until further order of the Commission:

Schedule K	Sheet 1.
Schedule L	Sheets 1 and 2.
Schedule M	Sheets 1, 2, 3, and 9

(B) Data required by the following questionnaire schedules and sheets or portions thereof, previously required to be reported on various dates for a number of areas, should be reported by the prescribed dates only for the Hugoton-Anadarko areas (code numbers 14, 16, 17, and 19) and the Texas Gulf Coast areas (code numbers 07, 08, and 09) and should not otherwise be reported until further order of the Commission:

Schedule D	Sheets 7 through 13.
Schedule H	Sheet 6.
Schedule K	Sheet 2.
Schedule L	Sheets 3 and 4.
Schedule M	Sheets 4 through 8 and 10.
Schedule N	Sheet 1.
Schedule O	Sheets 1 and 2.
Schedule P	Sheets 1 and 2.

and the 1955–1961 portions of

Schedule D	Sheets 4 and 6.
Schedule F	Sheets 3 and 4.
Schedule G	Sheet 2.
Schedule I	Sheets 2 and 4.

(C) In addition to the data originally due April 30, 1964, the items listed on the appendix to this order are still required to be answered on the indicated dates.

APPENDIX

REMAINING REQUIREMENTS AS TO PORTIONS ORIGINALLY DUE JULY 31, AUGUST 31 AND OCTOBER 31

Due July 31:

Schedule H Sheet 5	All.
Schedule H Sheet 6	1962 data, Hugoton-Anadarko areas.
Schedule J Sheet 1	Remainder of schedule.
Schedule K Sheet 2	Hugoton-Anadarko areas.
Schedule L Sheets 3 & 4	Hugoton-Anadarko areas.
Schedule M Sheets 4–8	Hugoton-Anadarko areas.
Schedule N Sheet 1	Hugoton-Anadarko areas.
Schedule O Sheets 1 & 2	Hugoton-Anadarko areas.
Schedule P Sheets 1 & 2	Hugoton-Anadarko areas.

Due August 31:

Schedule D Sheets 4, 6, and 7 through 13.	1955–1961 data, Texas Gulf Coast areas.
Schedule F Sheets 3 & 4	1955–1961 data, Texas Gulf Coast areas.
Schedule G Sheet 2	1955–1961 data, Texas Gulf Coast areas.
Schedule H Sheet 6	1962 data, Texas Gulf Coast areas.
Schedule I Sheets 1 & 3	Remainder of schedule.
Schedule I Sheets 2 & 4	1955–1961 data, Texas Gulf Coast areas.
Schedule J Sheet 3	Remainder of schedule.
Schedule K Sheet 2	Texas Gulf Coast areas.
Schedule L Sheets 3 & 4	Texas Gulf Coast areas.
Schedule M Sheets 4–8	Texas Gulf Coast areas.
Schedule N Sheet 1	Texas Gulf Coast areas.
Schedule O Sheets 1 & 2	Texas Gulf Coast areas.
Schedule P Sheets 1 & 2	Texas Gulf Coast areas.

Due October 31:

Schedule H Sheet 6	1955–1961 data, Hugoton-Anadarko areas. 1955–1961 data, Texas Gulf Coast areas.
Schedule M Sheet 10	1955–1962 data, Hugoton-Anadarko areas. 1955–1962 data, Texas Gulf Coast areas.
Schedule Q	All.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-63

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 12, 1964)

On September 14, 1962, as supplemented on May 3, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-63 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation and delivery to Northern Natural Gas Company (Northern), on an exchange basis, of up to 50,000 Mcf of natural gas per day (at 14.65 psia) in addition to the presently authorized daily volumes of up to 475,000 Mcf being exchanged pursuant to Applicant's FPC Gas Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2, and the construction and operation of certain natural gas facilities, all as more fully set forth in the application and supplement.

The proposed facilities for which authorization is sought herein are:

(a) approximately 62.6 miles of 20-inch O.D. pipeline and appurtenances, looping that portion of Applicant's Dumas Line extending from Milepost 68.7 to Milepost 131.3, in Yoakum, Cochran, Hockley and Lamb Counties, Texas;

(b) approximately 2.5 miles of 10¾-inch pipeline and appurtenances, looping Applicant's sales lateral serving Southwestern Public Service Company in Lamb County, Texas;

(c) 10¾-inch O.D. pipeline crossover assembly and necessary valves and regulators, between Applicant's Fullerton Plant discharge pipeline and the Goldsmith-to-Plains transmission line in Andrews County, Texas;

(d) a single additional 1,800 horsepower compressor unit and necessary appurtenances at Applicant's Plains Compressor Station in Yoakum County, Texas;

(e) modifications on five existing 1350 horsepower compressor units at Applicant's Dimmit Compressor Station in Lamb County and four 1000 horsepower compressor units at Applicant's Dumas Compressor Station in Moore County, both situated on Applicant's Dumas Line;

(f) two additional 880 horsepower compressor units and necessary appurtenances at Applicant's Fullerton Compressor Station in Andrews County; and

(g) one additional 3400 horsepower compressor unit and necessary appurtenances at Applicant's Goldsmith Compressor Station in Ector County.

The total estimated cost of the foregoing project, including overhead and contingency provisions, is $5,872,000, which is to be financed from Applicant's current working funds.

Applicant proposes to utilize existing sources of gas supply in the Permian Basin area for rendition of additional gas service to Southwestern Public Service Company (Southwestern), an existing direct industrial customer. The proposed deliveries to Northern are to be made on an exchange basis, hence no change in Applicant's net gas reserves will result therefrom.

Temporary certificate authorization was granted to Applicant pursuant to the subject application on April 10, 1963, and amended on June 7, 1963.

Due notice of this application was given by publication in the Federal Register on May 2, 1964. No protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, as supplemented, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The proposed transportation and delivery of additional natural gas by Applicant to Northern Natural Gas Company on an exchange basis, and the proposed construction and operation of facilities, as hereinbefore described and as more fully described in the application and supplement in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed transportation and delivery of natural gas, and construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to El Paso Natural Gas Company authorizing the transportation and delivery to Northern Natural Gas Company of up to 50,000 Mcf of natural gas per day on an exchange basis, and the construction and operation of certain natural gas facilities, all as hereinbefore described and as more fully described in the application and supplement in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TOWN OF UTICA, MISSISSIPPI, DOCKET NO. CP64–146

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 12, 1964)

On December 24, 1963, as amended on April 6, 1964, the Town of Utica, Mississippi, (Applicant) filed in Docket No. CP64–146 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Texas Eastern) to establish physical connection of its transmission facilities with the facilities to be constructed by the Applicant and to sell natural gas to Applicant for resale and distribution in Utica and environs, all as more fully set forth in the application, as amended.

Applicant proposes to construct approximately 12.3 miles of 4-inch pipeline extending from the point of interconnection with the facilities of Texas Eastern in Copiah County, Mississippi, to the town limits, together with a distribution system, and to sell and distribute natural gas to consumers in the area.

The estimated cost of Applicant's proposed facilities is $315,000 which cost will be financed by the sale of revenue bonds. Firm bid proposals for the bonds and firm contract proposals for construction of the facilities have been secured, according to Applicant's statements.

The application, as amended, shows the daily peak day and annual requirements, after the third year of service, to be 581 Mcf per day and 42,702 Mcf per year, respectively.

Texas Eastern has filed its answer to the application stating that it will abide by whatever decision the Commission may make on the merits of said application.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on May 15, 1964 (29 F.R. 6420). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Texas Eastern Transmission Corporation is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) Applicant, Town of Utica, is a municipality organized and existing under the laws of the State of Mississippi, and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas within the municipality.

(3) It is necessary and desirable in the public interest that Texas Eastern be directed to establish physical connection of its natural gas transmission system with the facilities proposed by Appplicant and to sell and deliver up to 581 Mcf of natural gas per day to Applicant as set forth in the application, as amended, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(5) The requirement that Texas Eastern serve Applicant, as proposed, will not place an undue burden upon Texas Eastern nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) The Texas Eastern Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transmission system with the facilities proposed by Applicant and to sell and deliver up to 581 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application, as amended, herein.

(B) Applicant shall be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order and a service agreement between the parties shall be executed and filed with the Commission in accordance with the Commission's Regulations.

(C) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-216

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 12, 1964)

On March 25, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-216 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove certain natural gas facilities consisting of a positive meter station used to deliver gas to J. M. Huber Corporation at a point on the 8-inch Orange City Gate No. 2 line in Orange County, Texas, all as more fully described in the application on file with the Commission and open for public inspection.

By order of the Commission issued October 10, 1960, in Docket No. CP61-13, Applicant was authorized to install the facilities herein sought to be abandoned and has been selling gas to J. M. Huber Corporation for use in certain gas lift compressors located in Orange County, Texas, but by letter agreement between these parties the related gas sales contract was cancelled on November 1, 1963. It appears that further use of the said facilities is not required presently or in the future.

The original cost of the facilities involved herein was $1,012.35. Removal of the same will enable Applicant to install them at some other location on its pipeline system when needed.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by United Gas Pipe Line Company of the facilities hereinbefore described be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP64-247

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 12, 1964)

On April 21, 1964, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP64-247 an application pursuant to Sections 7(c) and (b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities, and for permission and approval to abandon facilities, as follows:

(1) To construct approximately 11.26 miles of 12¾" O.D. main pipeline to loop 11.26 miles of existing 12¾" O.D. main pipeline in Fallon County, Montana. The flow efficiency of the existing line segment (constructed with pipe purchased in 1928) has deteriorated to the extent that it can no longer be significantly improved by cleaning. Additionally, the design operating pressure has now been attained. Looping will increase the reliability of service to the South Dakota markets.

(2) To construct approximately 2.36 miles of 4½" O.D. pipeline and 0.47 mile of 8⅝" O.D. pipeline to replace an existing 3.41 miles of 8⅝" O.D. pipeline, all located in Valley County, Montana. Increasing maintenance costs and leakage require the replacement of the original line and decreasing requirements at the Fort Peck Federal townsite make possible substitution by smaller diameter pipe.

(3) To install two 330 HP gas engine compressors, including foundations, piping and related facilities at the Baker Compressor Station located at Baker, Fallon County, Montana. These two compressor units (which will be moved from the Little Buffalo station[1] in Hot Springs County, Wyoming) will replace two obsolete 170 HP units installed in 1930. The total horsepower of the Baker Station will be increased from 2,470 to 2,790 HP.

The total estimated cost of the proposed facilities to be constructed is $595,400, which will be financed through internally generated funds and short-term bank loans.

The specific facilities for which Applicant seeks authorization to abandon, remove and retire are:

(1) Approximately 3.41 miles of 8⅝" O.D. pipeline and one valve setting, all in Valley County, Montana, and

(2) Two 170 HP gas engine-driven compressors at the Baker Compressor Station.

The total estimated charge to retirement reserve of the facilities proposed to be abandoned is $74,699.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

---

[1] Use of the Little Buffalo Station was discontinued February 1, 1961. Re: *Pan American Petroleum Corporation*, Docket No. G-18704 and *The Ohio Oil Company*, Docket No. G-18803.

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 23, 1946, in Docket Nos. G–220 and G–420 (5 FPC 64).

(2) The facilities proposed to be constructed, as hereinbefore described and as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the related transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co., to construct and operate facilities and to transport and deliver natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Applicant, Montana-Dakota Utilities Co., of the facilities hereinbefore described, be and the same are hereby granted.

(D) Applicant shall advise the Commission of the date of removal of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2320

ORDER ISSUING LICENSE (MAJOR)

(Issued June 12, 1964)*

Application was filed on September 7, 1962 by Niagara Mohawk Power Corporation (Applicant) of Syracuse, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2320, known as the Raquette River Project, located on the Raquette River in St. Lawrence County, New York.

Project No. 2320 consists of four developments known respectively as Higley, Colton, Hannawa and Sugar Island. Hannawa has been in operation since 1902. The Sugar Island, Colton and Higley developments commenced operations in 1925. Applicant states that the original structures of the developments remain today basically unchanged. The developments are situated on the Raquette River between its mouth and a point downstream from Piercefield. In Docket No. DI-179, *In the Matter of Central New York Power Corporation*[1] (Successor to Northern Development Corporation), the Commission in its Opinion No. 185, issued November 22, 1949, found that the "Raquette River, from its confluence with the St. Lawrence River to at least Piercefield at about mile 91 is a navigable waterway of the United States." (8 FPC 390)

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 and Order issuing license to Public Service Company of New Hampshire for Project No. 2288 (27 FPC 830), the license herein granted shall have an effective date of November 1, 1949 and a termination date of December 31, 1993.

The Secretary of the Army and the U.S. Corps of Engineers, Department of the Army, have reported that the plans of the project structures affecting navigation are considered satisfactory, and the plans were approved pursuant to the provisions of Section 4(e) of the Act.

The Department of the Interior recommended for inclusion in any license issued for the project certain conditions in the interest of the Department.

The Commission finds:

(1) The project is located on navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of New York and has submitted satisfactory evidence of its compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license.

(3) Public notice of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power develop-

[1] Central New York Power Corporation was consolidated with two other companies on January 5, 1950 and the survivor became Niagara Mohawk Power Corporation.

ment, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(6) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 61,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) The transmission facilities described in paragraph (B) below, and which were included as part of the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The following described transmission facilities which were not included in the application for license are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license as hereinafter provided:

(a) At the Higley plant, the generator leads, the 4.8/115 kv transformer, the 4.8/13.2 kv transformer, and associated facilities;

(b) At the Colton plant, the 115 kv leads to the Colton 115 kv substation, and appurtenant facilities; and

(c) At the Hannawa plant, the 23 kv bus tie line about 800 feet long to the Sandstone substation, and appurtenant facilities.

(9) The exhibits designated and described in paragraph (B) below, which were included in the application for license, conform to the Commission's rules and regulations, and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Niagara Mohawk Power Corporation (Licensee) under Section 4(e) of the Act for a period effective as of November 1, 1949 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2320 located on the Raquette River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2320 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2320–1) General Location Map.

Exhibit K: (6 sheets) Detail Maps—1 (FPC No. 2320–2) Sugar Island; 2 (FPC No. 2320–3) Hannawa, 3 (FPC No. 2320–4) Colton, 4 (FPC No. 2320–5) Colton, 5 (FPC No. 2320–6) Higley 6 (FPC–7) Higley.

(ii) Project works consisting of:

> *Higley Development*: located about 47 miles upstream from the Raquette River's confluence with the St. Lawrence River and about 4 miles downstream from the South Colton development (FPC License No. 2084), consisting of a concrete gravity dam 34 feet high and 207 feet long; a reservoir having an area of about 700 acres with a normal pool

elevation of 883.6 feet (USGS datum); an open concrete flume; a reinforced concrete powerhouse containing three hydroelectric units with a total generating capacity of 4,480 kw; and appurtenant electrical and mechanical facilities;

Colton Development: located 2 miles below the Higley development, consisting of a concrete gravity dam 27 feet high and 205 feet long; a reservoir having an area of 152 acres with a normal pool elevation of 837 feet; a steel pipeline; a surge tank; steel penstocks; a brick and structural steel powerhouse containing three hydroelectric units with a total generating capacity of 29,520 kw; three 13.8/115 kv transformers; and appurtenant electrical and mechanical facilities;

Hannawa Development: located 6 miles below the Colton development, consisting of a stone and concrete-gravity dam 40 feet high and 215 feet long; a reservoir having an area of 168 acres with a normal pool elevation of 552 feet; an open canal; steel penstocks; a stone and structural steel powerhouse containing two hydroelectric units with a total generating capacity of 7,200 kw; an outdoor 4.8/23 kv transformer; and appurtenant electrical and mechanical facilities; and

Sugar Island Development: located 1 mile below the Hannawa development, consisting of a concrete-gravity dam 37 feet high and 181 feet long; a reservoir having an area of 29 acres with a normal pool elevation of 470 feet; a steel pipeline; a surge tank; steel penstocks; a brick and structural steel powerhouse containing two hydroelectric units with a total generating capacity of 4,800 kw; an outdoor 4.8/115 kv transformer; and appurtenant electrical and mechanical facilities;

the location, nature and character of which are more specifically shown and described by the exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (8 sheets) Plans, Elevations and Sections—1 (FPC No. 2320-8) Higley; 2 (FPC No. 2320-9) Colton, General; 3 (FPC No. 2320-10) Colton, Dam & Intake; 4 FPC No. 2320-11) Colton, Surge Tank & Powerhouse; 5 (FPC No. 2320-12) Hannawa, Dam, Canal & Intake; 6 (FPC No. 2320-13) Hannawa, Forebay, Penstocks & Powerhouse; 7 (FPC No. 2320-14) Sugar Island, General; 8 (FPC No. 2320-15) Sugar Island, Dam, Surge Tank & Powerhouse.

Exhibit M: A cover sheet entitled *Exhibit "M", Raquette River Project*, five typewritten sheets giving a general description of mechanical and electrical equipment, and the following four drawings:

No. 24197 Sugar Island, Operating Diagram
No. 20246 Hannawa, Operating Diagram
No. 20335 Colton, Switching Diagram
No. 20669 Higley, Operating Diagram

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised November 1, 1963), entitled "Terms and Conditions of

License for Constructed Project Affecting Navigable Waters of the United States (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (61,300 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 30. The Licensee shall within six months from the date of issuance of this license, file with the Commission an application for amendment of this license to include the following transmission facilities:

1. At the Higley plant, the generator leads, the 4.8/115 kv transformer, the 4.8/13.2 kv transformer and appurtenant facilities;
2. At the Colton plant, the 115 kv leads to Colton 115 kv substation and appurtenant facilities;
3. At the Hannawa plant, the 23 kv bus tie line about 800 feet long to the Sandstone substation and appurtenant facilities.

Article 31. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 32. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States, of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalities specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOUTHEASTERN PUBLIC SERVICE COMPANY, DOCKET NO. RI63-361

ORDER DENYING REHEARING AND STAY

(Issued June 15, 1964)

On May 21, 1964, Southeastern Public Service Company filed an application for rehearing and stay of our Opinion No. 425 and accompanying order issued April 21, 1964, in the above docket. In that opinion we found that Southeastern had not justified a rate increase to 25.25 cents per Mcf for sales from the South Section 28 Field in Southern Louisiana and ordered the rate increase dismissed with refunds of all amounts collected above the prior effective rate.

In its application Southeastern argues that our use of an acquisition cost of service was improper if the rate could have been justified on an original cost basis. Southeastern also argues that its rate should not continue to be subject to our area rate proceeding since a separate proceeding has now been completed.

We find no merit in the arguments of Southeastern. The presiding examiner's initial decision in this proceeding amply demonstrated that the rate could not be justified on an original cost basis and by using the acquisition cost we were giving Southeastern the maximum amount of allowable cost in testing the justification of its rate. As to Southeastern's argument that its rate should not be subject to the area proceeding, we simply note that it is our policy to make all rates in an area subject to adjustment at the conclusion of an area proceeding whether the presently effective rate is in effect subject to refund, has been finally determined in a settlement order, or even if it has never been the subject of any prior rate proceeding.

With regard to Southeastern's request for a stay of our requirement that it immediately file a reduced rate and make refunds, our opinion made clear that this 25.25 cent rate would have a detrimental effect on other prices in the area. We find nothing in the arguments of Southeastern which would lead us to conclude that the granting of a stay would not be detrimental to the public interest.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in Southeastern's petition filed on May 21, 1964 present no facts or principles of law which were not considered by the Commission when it issued its opinion and order in this proceeding or which now having been considered warrant any further change or modification of the opinion and order.

(2) The petition for a stay of our order should be denied.

The Commission orders:

(A) The petition for rehearing filed by Southeastern Public Service Company on May 21, 1964 in this proceeding is hereby denied.

(B) The petition for a stay of the order is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CAROLINA PIPELINE COMPANY, COMPLAINANT, v. SOUTHERN NATURAL GAS COMPANY, RESPONDENT, DOCKET NO. RP63-4

ORDER ON APPEAL FROM RULING OF SECRETARY AND DENYING APPLICATION FOR REHEARING AND FOR LEAVE TO ADDUCE ADDITIONAL EVIDENCE

(Issued June 16, 1964)

By letter dated May 15, 1964, the Secretary notified the York, Lancaster and Chester County Natural Gas Authorities (Authorities) that their application for rehearing of Commission Opinion No. 423, issued March 30, 1964, had been rejected on the ground that the document was received by the Commission after the expiration of the 30-day statutory period prescribed by Section 19 (a) of the Natural Gas Act.

By letter filed May 22, 1964, and here treated as an appeal from the ruling of the Secretary under Section 1.7 of the Commission's Rules of Practice and Procedure, the Authorities describe the mailing of the application at Rock Hill, South Carolina, on Tuesday April 28, 1964; state their expectation that it would be delivered to the Commission on the following day, April 29, within the prescribed filing period, and urge acceptance of the application for filing as having been a timely made, constructive filing in the circumstances.

The Authorities present in support of their appeal, affidavits of their attorney and his secretary showing that the application was placed in the custody of the United States Post Office on April 28, and the affidavit of the Postmaster at Rock Hill, South Carolina, attesting to the mailing of the document on April 28 at a time which should have placed the application in the Washington, D. C., Post Office for delivery to the Commission by Noon on April 29, within the 30-day period for filing. The 14 copies mailed to the Secretary were stamped in the Commission's mailroom with April 30, 9:13 a.m., 1964, as the date of receipt. There is no independent recollection by mail clerks or other personnel as to the actual date of delivery.

In the light of the new evidence submitted with the Authorities' appeal from the Secretary's ruling, we now find that the application for rehearing was received by the Commission on April 29, 1964, and that the application was timely filed. There is a rebuttable presumption that the document arrived on April 29. *Arkansas Motor Coaches* v. *C.I.R.*, 198 F. 2d 189 (CA8, 1952); *Central Paper Co.* v. *C.I.R.*, 199 F. 2d 902 (CA6, 1952); *Shultz* v. *United States*, 132 F. Supp. 953 (C. Cls., 1955); *Helman* v. *Fruit Growers Express Co.*, 200 F. Supp. 234 (D.N.J., 1961). This presumption is not rebutted by the stamped date of receipt under the present circumstances.[1]

Authorities' application which contains no new facts or contentions relative to grounds for rehearing, is a counterpart of the application for rehearing filed by Carolina Pipeline Company (Carolina) on April 24, 1964, and denied by order issued May 22, 1964. That portion of the Authorities' application requesting leave for Carolina to adduce additional evidence, corresponds in substance with a pleading for the same objective filed by Carolina and denied by us on April 3.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in Authorities' application filed herein, are a repetition of contentions and alleged facts presented by Carolina for the same objective. No facts or principles of law which were not considered by the Commission when it issued its Opinion No. 423 and accompanying order, or which, having now been considered warrant any change in, modification of, or rehearing of such Opinion and order.

(2) Applicants' request that Carolina be permitted to adduce additional evidence should be denied.

The Commission orders:

The application for rehearing and for grant of leave to Carolina to adduce additional evidence, filed by the Authorities in the above-entitled proceeding, is hereby denied.

MEMORANDUM OPINION

ANNUAL CHARGES PRESCRIBED FOR LICENSEES UNDER THE FEDERAL POWER ACT. DOCKET NO. R-228

ORDER NO. 272-A

MEMORANDUM OPINION AND ORDER ON REHEARING

(Issued June 18, 1964)

Syllabus

1. **Commission *finds* that prior to 1935 amendments it had no statutory *duty* to provide for adjusting annual charges to licensees for reimbursing United States for costs of administering Part 1 of the Power Act—and could legally provide for a fee which could not be modified for life of license. P. 1558.**
2. **Commission *concludes* it had the power to specify in Union Electric's 1925 license that it would not increase annual charges; and under Section 6 of the Power Act such provision cannot be superseded without licensee's agreement. P. 1558.**

---

[1] **The presumption would not prevail against a clerk's positive recollection of out-of-time receipt. *Shultz* v. *United States*, 132 F. Supp. 953, 955 (C. Cls., 1955).**

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

The issue before us concerns our authority to adjust annual charges to licensees for reimbursing the United States for its costs in administering Part I of the Federal Power Act (16 U.S.C. 791–823), which before 1935 was the Federal Water Power Act of 1920 (41 Stat. 1063). We are required to fix these charges by subsection 10(e) (16 U.S.C. 803(e)).

Union Electric Company, licensee for the Bagnell Project, Project No. 459, on the Osage River, Missouri, filed an application on December 20, 1963, for rehearing of Order No. 272, issued on November 20, 1963, (30 FPC 1333, 28 F.R. 9648) which establishes a new system for fixing annual charges.[1] We granted rehearing on January 19, 1964, to permit consideration of this application.

Union Electric's license, issued on February 25, 1926, states in article 21:

> The licensee shall pay to the United States reasonable annual charges for the purpose of reimbursing the United States for the costs of the administration of the Act. . . . Such charges shall be determined in accordance with the provisions of Regulation 14 [of the Commission's Rules and Regulations]. . . .

Regulation 14, adopted in 1921, provided:

> . . . After the maximum rates hereinabove prescribed have become effective with respect to any license, they shall thereafter continue without change with respect to such license unless or until the commission or Congress shall make reductions in such rates of charge.

Union Electric contends that Order No. 272, under which its annual charges would be higher than under Regulation 14, imposes a new condition upon its license in contravention of section 6 of the Federal Power Act (16 U.S.C. 799), stating that "Licenses . . . may be altered . . . only upon mutual agreement between the licensee and the Commission. . . ."

The original subsection 10(e), as adopted in 1920 and in existence as of the time the license for Project No. 459 was issued, read like the present section except that the final phrase relating to adjustment of charges then applied specifically only to charges for the expropriation of excess profits and not to annual charges for reimbursing the Government for administrative costs.[2] However, the 1935 Amendments to the Federal Water Power Act clarified the

---

[1] Before Order No. 272, annual charges generally were fixed by assigning a charge per power unit, either horsepower or horsepower and kilowatt-hours. Order No. 272 substituted a system of distributing the actual annual costs of administering Part I among the licensees in the proportion of each licensee's horsepower and kilowatt-hours to all licensees' horsepower and kilowatt-hours.

[2] A comparative print of subsection 10(e)'s 1935 amendment reads:

> (e) That the licensee shall pay to the United States reasonable annual charges in an amount to be fixed by the Commission for the purpose of reimbursing the United States for the costs of the administration of this *Part;* for recompensing it for the use, occupancy, and enjoyment of its lands or other property; and for the expropriation to the Government of excessive profits until the respective States shall make provision for preventing excessive profits or for the expropriation thereof to themselves, or until the period of amortization as herein provided is reached, and in fixing such charges the Commission shall seek to avoid increasing the price to the consumers of power by such charges, and *any such* charges **[**for the expropriation of excessive profits**]** may be adjusted from time to time by the Commission as conditions may require . . . [italicized words are additions; words in black brackets are deletions.]

Commission's authority by providing that *any* charges may be adjusted.[3] Thus, the issue here is not whether the Commission has authority to adjust annual charges in any license issued after enactment of the 1935 Amendments.[4] And the issue is not whether the Commission had authority prior to 1935 to prescribe for adjustment of annual charges in licenses. Rather, the issue is the significance of the Commission's action in issuing a license to petitioner which clearly proscribed any upward adjustment in annual charges.

The legislative history of the Federal Water Power Act reveals several important efforts to include a provision enabling the Commission to adjust annual charges. Initially, Rep. Sherley of Kentucky succeeded in amending H.R. 16053, 63rd Cong., 2d Sess. (1914) to provide:

> The Secretary of War may provide as a condition of such approval for the payments to the United States of reasonable annual charges for the benefits that accrue to the grantee by the authority given under this act, and *at the end of twenty years, and every ten years thereafter, the Secretary of War may readjust the annual charges as may then be just and reasonable.* [Emphasis added.][5]

When the House was considering H.R. 3184 which, as amended, became the Federal Water Power Act, the Sherley Amendment had its sequel in the unsuccessful Little Amendment. Representative Little of Kansas proposed to amend the bill to allow adjustment of all annual charges at these intervals.[6] He said that an annual charge which was reasonable at the beginning of the license would be nothing, comparatively, at the end.

Representatives Small of North Carolina and McArthur of Oregon opposed the Little Amendment in debate on the ground that it would discourage investment in the hydroelectric industry. Representatives Ferris of Oklahoma and Sims of Tennessee argued that since the Commission could provide for adjusting annual charges in the licenses, the Little Amendment was unnecessary. Representative Sims made abundantly clear that adjustment was not possible without a license provision allowing it:

> MR. LITTLE. But they have to do it when they issue the license or they forever forfeit any chance to adjust the charges to changing conditions.
>
> MR. SIMS. They have to put it in the license.[7]

The Little Amendment was rejected, and H.R. 3184 was passed and sent to the Senate.

The Senate report on the bill[8] proposed an amendment which, while it would have confined the purposes for which annual charges could be fixed, would have permitted their periodic adjustment:

> That the licensee shall pay for the license herein granted such reasonable annual charges as may be fixed by the Commission, for the purpose of reimbursing the United States for the cost of the administration of the Act in relation to water powers developed under its jurisdiction, in the proportion that the water power developed by the project covered by

---

[3] The rather bare legislative history of this amendment indicated that it was introduced by the Commission to make the Commission's authority to adjust all 10(e) charges "explicit" (Hearings before House Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess. at 390) and "express" (House Report No. 1318, 74th Cong., 1st Sess. 24). See also Hearings before the Senate Committee on Interstate Commerce, 74th Cong., 1st Sess. at 237, S. Report No. 621, 74th Cong., 1st Sess. 45.

[4] Since January 1, 1937, the Commission has pursued a policy of providing in licenses that annual charges for administrative costs are adjustable.

[5] 51 Cong. Rec. 12759 (1914)

[6] 58 Cong. Rec. 2221 (1919)

[7] 58 Cong. Rec. 2223 (1919)

[8] S. 180, 66th Cong., 1st Sess. (1919)

> said license bears to the total water power developed by all projects under the Act, and for that purpose *such charges may be readjusted from time to time, not oftener than once in two years.* . . . [Emphasis added.]

The Senate in approving H.R. 3184 adopted this amendment.[9] The House being in disagreement with the Senate amendments, the bill was referred to conference committee, in which the underlined language was omitted and the language as finally enacted in subsection 10(e) was worked out. The conference committee did not offer any explanation of the language finally adopted.

The legislative history thus shows that Congress rejected the two proposals which would have expressly authorized the Commission to adjust annual charges, even though both proposals contained a minimum period for successive adjustments.

As indicated, we do not here have to decide whether in the light of such history the Commission prior to the 1935 amendment might have had the *power* to provide for adjusting such fees. We need only find that the Commission had no statutory *duty* to provide for adjusting fees and could legally provide for a fee which could not be modified for the life of the license.

In the light of the foregoing legislative history, we conclude that the Commission had the power to specify in Union Electric's 1925 license that it would not increase the fees for administering the Act during the term of the license, and that, under the statutory scheme, this provision cannot be superseded without petitioner's agreement.

Upon consideration of the entire record in this proceeding,

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act that Order No. 272 be amended as hereinafter provided.

Acting pursuant to the authority granted by the Federal Power Act, particularly subsection 10(e) and section 309 thereof (16 U.S.C. 803(e), 825(h)),

The Commission orders:

(A) Section 11.20 of the Commission's Regulations under the Federal Power Act, Subchapter B, Chapter I of Title 18 of the Code of Federal Regulations is amended as follows:

1. Insert in paragraph (a) of Section 11.20 a new subparagraph (5). Section 11.20(a) then will read in full as follows:

§ 11.20 Costs of Administration.

Reasonable annual charges will be assessed by the Commission against each licensee to reimburse the United States for the costs of administration of Part I of the Federal Power Act as follows:

(a) For licensees, other than State or municipal, of projects of more than 2,000 horsepower of installed capacity:

(1) A determination shall be made for each fiscal year of the costs of administration of Part I of the Federal Power Act chargeable to such licensees, from which shall be deducted such administrative costs allocated by the Commission to minor part licenses for which administrative charges are waived under section 10(i) of the Act and those fixed by the Commission in determining headwater benefit payments.

(2) For each calendar year the costs of administration determined under subparagraph (1) shall be assessed against such licensee in the proportion

---

[9] 57 Cong. Rec. 1573 (1919)

that the annual charge factor for each such project bears to the total of the annual charge factors under all such outstanding licenses.

(3) The annual charge factor for each such project shall be its authorized installed capacity (horsepower); plus 150 times its annual energy output in kilowatt-hours divided by one million.

(4) To enable the Commission to determine such charges annually, each such licensee shall file with the Commission, on or before February 1 of each year, a statement under oath showing the gross amount of power generated (or produced by non-electrical equipment) by the project during the preceding calendar years, expressed in kilowatt hours.

(5) No licensee under a license issued prior to August 26, 1935, shall be required to pay annual charges in an amount greater than that prescribed in such license.

2. Amend Section 11.20(c) to read as follows:

(c) For licensees of projects of 2,000 horsepower or less of installed capacity the charge for costs of administration shall be 5 cents per horsepower with a minimum charge of $5 per annum for each such license except for those licenses for which administrative charges are waived under section 10(i) of the Act. No licensee under a license issued prior to August 26, 1935, shall be required to pay annual charges in an amount greater than that prescribed in such license.

[Secs. 10(e) and 309 (16 U.S.C. 803(e), 825(h))]

(B) The amendments prescribed herein will be effective retroactively to January 1, 1964.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. CP64-73

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On September 26, 1963, United Fuel Gas Company (United) filed an application in Docket No. CP64-73, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing, the installation and operation of a new delivery point and interconnection of facilities with Gas Transport, Inc. (Gas Transport), the sale and delivery of natural gas to, and the exchange of natural gas with Gas Transport at the new delivery point, and the utilization of existing transmission pipeline facilities in connection therewith, all as more fully set forth in the application on file with the Commission.

United and Gas Transport are presently utilizing an uncertificated point of interconnection located near Sandyville, in Jackson County, West Virginia, for the exchange of 1500 Mcf of natural gas daily, which point of interconnection is proposed to be discontinued and the exchange point transferred to a proposed point of interconnection near United's Rockport Compressor Station in Wood County, West Virginia. United further proposes to transport, sell and deliver to Gas Transport at the new point of interconnection 6500 Mcf of natural gas daily, utilizing existing measuring and regulating equipment to make the sale.

United states it now seeks Commission authorization for the exchange of gas with Gas Transport because such exchange deliveries will be made through its interstate facilities instead of being made through what it considered to be gathering facilities in the Wood-Wirt area and not requiring Commission authorization. Upon issuance of authorization United will file its copy of the new exchange and transportation agreement dated August 29, 1963, as a special rate schedule, and Gas Transport will file superseding sheets to its presently effective FPC Rate Schedule X-1.

The estimated cost of United's proposed interconnection is $850, which will be defrayed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 9, 1958, in Docket No. G-13372 (20 FPC 347).

(2) Gas Transport, Inc., a Delaware corporation having its principal place of business in Lancaster, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 28, 1941, in Docket No. G-213 (2 FPC 1079).

(3) The proposed installation and operation of the new delivery point and interconnection, the exchange of natural gas, and the transportation, sale and delivery of natural gas by United to Gas Transport, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed installation and operation of a new delivery point and interconnection, the exchange of natural gas, and the transportation, sale and delivery of natural gas by United to Gas Transport are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) United is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) It is appropriate in the administration of the Natural Gas Act and in the public interest that United file an appropriate rate schedule covering the exchange of natural gas with Gas Transport, and that appropriate superseding sheets be filed by Gas Transport to its presently effective FPC Rate Schedule X-1.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to United in this proceeding authorizing the installation and operation of a new delivery point and interconnection with Gas Transport, the exchange of natural gas with, and the sale and delivery of natural gas to Gas Transport, as hereinbefore described, and as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) United and Gas Transport shall file their respective rate schedule and superseding tariff sheets within 15 days of the issuance of this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64–88

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On October 8, 1963, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64–88 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a main line meter station on Applicant's 22-inch main line in Sweetwater County, Wyoming, all as more fully set forth in the application.

The proposed facility will enable Applicant to receive delivery of natural gas from Western Transmission Corporation (Western) which Western has been authorized to sell to Applicant by Opinion No. 429 and accompanying order issued on May 26, 1964, in Docket No. CP63–329. Western will provide 5,967 Mcf of peak-day gas at 14.65 psia, to Applicant with an additional 24,000 Mcf per day of emergency stand-by gas for the next three winters.

The estimated cost of the proposed facility is $17,930 which will be defrayed from current working funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed meter station and to take natural gas from Western Transmission Corporation as hereinbefore described, as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facility hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within thirty days from the date on which this order issues.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP64-203

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On March 10, 1964, as supplemented on March 12, 1964, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP64-203 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the fiscal year July 1, 1964, to July 1, 1965, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application, as supplemented.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $1,000,000, with no single project to exceed a cost of $250,000, which costs will be financed from funds on hand, from cash generated from operations and from internal sources.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order in Docket No. G-18907, issued August 30, 1962, accompanying Opinion No. 362 (28 FPC 401, 418).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the fiscal year July 1, 1964, to July 1, 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct during the fiscal year July 1, 1964, to July 1, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the fiscal year July 1, 1964, to July 1, 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,000.000, with no single project to exceed a cost of $250,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended, is hereby granted.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP64-217

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On March 30, 1964, Michigan Gas Storage Company (Applicant) filed in Docket No. CP64-217 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing a new delivery point in Washington Township, Gratiot County, Michigan, for the delivery of natural gas to Consumers Power Company (Consumers) and the construction and operation of necessary metering and regulating facilities at said proposed new delivery point, all as more fully set forth in the application.

The purpose of the new delivery point is to enable Consumers to render natural gas service to: (1) the Village of Ashley and adjoining areas in the Townships of Elba and Washington, Gratiot County, Michigan, and (2) the unincorporated community of North Star and adjoining areas in the Township of North Star, Gratiot County, Michigan.

The total cost of Applicant's proposed facilities is estimated to be $22,000, which cost will be financed from funds on hand.

Applicant states that the proposed deliveries to Consumers at the new point will not require any increase in annual or peak day deliveries to Consumers since adjustment will be made, as necessary, by changing delivery pattern at other points on Applicant's system.

The estimated third year peak day and annual requirements for the two communities and environs is approximately 297 Mcf and 40,281 Mcf, respectively.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 30, 1956, in Docket No. G–10341 (16 FPC 882).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-219

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On March 30, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-219 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery, on an interruptible and firm basis, of natural gas, by means of existing facilities, to California-Pacific Utilities Company (California-Pacific) for transportation to and resale and distribution by California-Pacific in the communities of Imbler and Elgin, Oregon, their respective environs, and intervening and adjacent areas, all as more fully set forth in the application.

The application shows that deliveries of natural gas to California-Pacific will be made at the outlet of Applicant's existing La Grande, Oregon, meter station and that California-Pacific will transport said gas to points of resale and general distribution. The total cost of transmission and distribution facilities to be constructed by California-Pacific is estimated to be $447,334.

The application shows the total estimated third year peak day and annual requirements for the proposed service to be 1,155 Mcf and 213,296 Mcf, respectively. The total estimated fifth year peak day and annual requirements are shown to be 1,192 Mcf and 285,314 Mcf, respectively.

The proposed sale of natural gas to California-Pacific will be made in accordance with the rates contained in Applicant's FPC Gas Tariff, Original Volume No. 3.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1964, in Docket No. G-288 (4 FPC 486).

(2) The proposed transportation and sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be in interstate commerce, subject to the jurisdiction of the Commission, and such transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–227

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 19, 1964)

On April 6, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP64–227 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing August 7, 1964, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,000,000 and no single project will exceed a cost of $500,000, which costs will be financed from cash on hand or which will be available from current operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing August 7, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct during the 12-month period commencing August 7, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 175.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

CITY OF PETERSBURG, ALASKA, PROJECT NO. 2432

ORDER ISSUING PRELIMINARY PERMIT

(Issued June 19, 1964)

Application was filed on December 10, 1963, by the City of Petersburg, Alaska (Applicant) for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2432, to be known as the Kupreanof Hydroelectric Project, to be located on Towers and Hamilton Creeks, 17 miles west of the City of Petersburg, and affecting lands of the United States within the Tongass National Forest.

The Secretary of the Army and the Chief of Engineers have stated that there is no objection to the issuance of a preliminary permit for the project.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit for the project certain conditions in the interest of fish and wildlife and archeological values.

The Department of Agriculture, in commenting on the application, recommended for inclusion in any preliminary permit for the project, certain conditions for the protection of the National Forest land and resources.

The Department of Health, Education and Welfare, in commenting on the application, advised that the proposed project is not expected to have any adverse effects on water supply or pollution control in the area, and suggested that Applicant consult with the Alaska Department of Health and Welfare respecting possible mosquito problems associated with the proposed impoundment.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9(b) of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit.

While Applicant did not specify any period for the permit, it appears appropriate that the initial period of the permit should be 24 months as hereinafter provided.

The Commission finds:

(1) Applicant is a municipal corporation organized under the laws of the State of Alaska.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The proposed project will affect lands of the United States but will not affect any Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to the City of Petersburg, Alaska (Permittee) for a period of 24 months, effective as of June 1, 1964, for the sole purpose of maintaining priority of application for license of Project No. 2432, affecting lands of the United States within the Tongass

National Forest, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2432, to be constructed in three phases, would consist of: *Phase One*—comprising: (1) a dam on Towers Creek 1.5 miles from its entrance into Towers Bay (elevation 150) and forming Towers Lake Reservoir at elevation 265 with provision for future increase to elevation 280; (2) various related project works including an overflow channel, a small diversion dam, forebay, and provisions for the care of anadromous fish; (3) one intake structure on Towers Lake and a 1.5 mile long penstock to Towers Bay; (4) a powerhouse on Towers Bay containing generating equipment of 7,200 kilowatt capacity with provisions for future expansion; and (5) a transmission line from the powerhouse to the City of Petersburg and to the Town of Kake. *Phase Two*—will provide for the expansion of the project to include the drainage basin of Hamilton Creek and the installation of the following additional generation capacity: (1) a dam on Hamilton Creek 3.5 miles above its entrance into Hamilton Bay forming Hamilton Lake—adjoining Towers Lake—and subsequently forming one reservoir at elevation 280; (2) a spillway for the combined drainage basins at Hamilton Creek Dam; (3) fish ladder facilities for upstream and downstream fish migration; (4) additional generating capacity as required, estimated at a 14,400 kilowatt total; and (5) adjustment of the transmission system. *Phase Three*—involves a future diversion of two additional drainage areas located to the north and west of the Hamilton and Towers Creek areas into the drainage basin of the combined system by construction of small dams and canals. The power plant would be increased in capacity to approximately 21,600 kilowatts by the addition of a third generating unit and expansion of the transmission facilities accordingly.

(C) This permit is also subject to the terms and conditions set forth in Form P–1, entitled "Terms and Conditions of Preliminary Permit." (16 FPC 1303–1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, San Francisco, California, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, consult with the Alaska Department of Health and Welfare concerning possible mosquito problems associated with the impoundment.

Article 11. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester at Juneau, Alaska, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the Forest Service, Department of Agriculture, during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of National Forest resources insofar as they are affected by the proposed project.

Article 12. The Permittee shall, during the period of project planning, cooperate with the U. S. Fish and Wildlife Service and the Alaska Department of Fish and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of or damage to these resources, and (3) to develop and improve those resources where practicable.

Article 13. The Permittee shall, during the period of project planning, consult with the Department of Anthropology, University of Alaska, College, Alaska, regarding a projected archeological survey and salvage in the event of project construction.

Article 14. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

Article 15. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" which is required for the filing of an application for license pursuant to Section 4.41 of the Commission Regulations under the Federal Power Act.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgement of the acceptance of this preliminary permit, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

KODIAK ELECTRIC ASSOCIATION, INC., PROJECT NO. 2434

ORDER ISSUING PRELIMINARY PERMIT

(Issued June 19, 1964)

Application was filed on December 23, 1963, by Kodiak Electric Association, Inc. (Applicant) for a preliminary permit under Section 4 (f) of the Federal Power Act (Act) for proposed Project No. 2434 to be known as the Terror Lake project, to be located on Terror River at the outlet of Terror Lake, in the Falls Creek and Shotgun Creek drainage basins, and Kizhuyak Canyon, Borough of Kodiak Island, Alaska, and affecting lands of the United States within the Kodiak National Wildlife Refuge and other lands of the United States.

The Secretary of the Army and the Chief of Engineers have stated that there is no objection to the issuance of a preliminary permit for the project.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit for the project certain conditions in the interests of fish and wildlife and archeological values.

The Department of Health, Education and Welfare, in commenting on the application, advised that the proposed project is not expected to have any adverse effects on water supply or pollution control in the area, and suggested that Applicant consult with the Alaska Department of Health and Welfare respecting possible mosquito problems associated with the proposed impoundment.

Applicant requests a preliminary permit for a period of 30 months. It appears appropriate, however, that the initial period of the permit should be 24 months as hereinafter provided.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 (b) of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Alaska.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The proposed project will affect lands of the United States but will not affect any Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to Kodiak Electric Association, Inc. (Permittee) of Kodiak, Alaska, for a period of 24 months, effective as of June 1, 1964, for the sole purpose of maintaining priority of application for license for Project No. 2434, affecting lands of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2434 would consist of: (1) a rock-fill dam at the outlet of Terror Lake; (2) a reservoir (maximum pool elevation about 1,350 feet); (3) a spillway; (4) an unlined horizontal tunnel, about 16,800 feet long and 9 feet in diameter, from Terror Lake to Shotgun Creek surge pond and balancing reservoir; (5) ultimately a diversion dam on Falls Creek and a diversion tunnel, about 2,000 feet long, to Shotgun Creek surge pond and balancing reservoir; (6) a pressure tunnel, about 5,500 feet long, from Shotgun Creek surge pond and balancing reservoir to the powerhouse in Kizhuyak Canyon; (7) a powerhouse and substation, at elevation of about 200 feet, with 15,000 kw initial capacity (7,500 kw to be added later); (8) about 27 miles of 69 kv transmission line from the powerhouse to Kodiak; and (9) two substations, one at Kodiak and one near the U.S. Navy base.

(C) This permit is also subject to the terms and conditions set forth in Form P-1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303-1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, San Francisco, California, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Alaska Department of Fish and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish and wildlife resources; (2) to mitigate and compensate for the loss or damage to those resources; and (3) to develop and improve those resources where practicable.

Article 11. The Permittee shall, during the period of project planning, consult with the Department of Anthropology of the University of Alaska, College, Alaska, to determine the extent of any archeological survey and salvage excavations that may be necessary prior to any construction activities.

Article 12. The Permittee shall, during the period of project planning, consult with the Alaska Department of Health and Welfare to determine any necessary mosquito control measures.

Article 13. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission's regulations under the Federal Power Act.

Article 14. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgement of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission 60 days from the date of issuance of this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross, and David S. Black.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL; AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64–2, ET AL.

ORDER SCHEDULING INITIAL PRE-HEARING CONFERENCE AND ADDING RESPONDENTS

(Issued June 22, 1964)

By order of November 27, 1963 (30 FPC 1354; 28 Fed. Reg. 12645) we instituted proceedings in Docket Nos. AR64–1 and AR64–2, to determine the just and reasonable rate or rates for the sales, subject to the Commission's jurisdiction, of natural gas produced in the geographical areas described in such order. Our initial order of November 27, 1963, did not provide for the procedures to be adhered to in these two proceedings nor did it fix dates for the holding of conferences or hearings. While Docket Nos. AR64–1 and AR64–2 are separate and distinct proceedings and ultimately are to be decided as such, there are matters of procedure and of substance common to both, and there is reason to believe that the convenience of the participants, the expedition of the proceedings and the public interest could benefit from a limited consolidation of the two proceedings. Limited consolidation might save time by eliminating duplications and by permitting hearings to start early on matters common to both proceedings.

In order to afford an opportunity for discussion and consideration of the possibile advantages of such limited consolidation and the desirability and feasibility thereof, we are by this order instituting a preliminary consolidated prehearing conference. We do not now otherwise consolidate the two proceedings and shall not decide whether or to what extent to do so, until the record of the initial conference, together with the report thereon of the presiding examiner, has been certified to us.

This is not to be construed, however, as a limitation upon the matters which may be considered at such prehearing conference, nor the powers and responsibilities of the Presiding Examiner as set out in Order No. 217 and Paragraph 1.18 of the Commission's Rules of Practice and Procedure with respect thereto. Specifically there should be explored devices and techniques by which uncontroverted data may be stipulated, repetitive and cumulative presentations may be avoided and joint evidentiary showings may be made. The conference should also consider problems of data collection and compilation action the parties or by our staff, procedures for early cooperative action by and between the participants, and to the extent possible, the number and order of presentation of witnesses. The Commission contemplates that a subsequent conference, or conferences, may be found necessary before dates can be settled upon for the service of evidence and the appearance of witnesses.

Our order of November 27, 1963, made respondents to these proceedings all persons making sales of gas in interstate commerce from those geographical areas, and consolidated for disposition herein all proceedings involving increased rate filings suspended by the Commission applicable to sales of natural gas therein. It is necessary to indicate additional respondents in each of these proceedings for the following reasons: Panhandle Eastern Pipe Line Company and Colorado Interstate Gas Company are pipeline-company producers in the Hugoton-Anadarko area making off-system sales to non-affiliated purchasers. Since such sales are to be reviewed in area rate proceedings,[1] these two companies would normally be named respondents. Both have intervened in the Hugoton-Anadarko proceedings, however, so it is not necessary to designated them formally as respondents. Moreover, we believe that all purchasers under independent producer rate schedules in the relevant areas should be parties to these proceedings. Many of the pipeline companies or other purchasers have already been named as respondents or have intervened. Some buyers have not intervened, however, and it is appropriate that they, too, be made parties.[2] The appendix to this order lists and classifies those additional buyers who are now made parties but have not heretofore been named as such.

The Commission orders:

(A) All persons named in the appendix hereto, who are purchasers under FPC gas rate schedules for sales of gas produced in the Hugoton-Anadarko or Texas Gulf Coast areas, are made respondents in Docket No. AR64-1 and Docket No. AR64-2, respectively, as indicated in the appendix.

---

[1] See Opinion 414-A, *Union Producing Co.*, 31 FPC 503.

[2] See *Area Rate Proceeding* (Permian Basin Area), 29 FPC 737.

(B) A consolidated prehearing conference will be held in these proceedings pursuant to this order and the Commission's Rules of Practice and Procedure, particularly Section 1.18 thereof, at 10:00 a.m. E.D.T. on July 28, 1964, in a hearing room of the Federal Power Commission, at Conference Room B, Departmental Auditorium, Constitution Avenue, Northwest, between 12th and 14th Streets, Washington, D.C., for the purposes set out herein and set forth in said section of such Rules, and to afford all interested persons an opportunity to be heard with respect to the procedures to be followed in expeditiously determining the issues to be tried in the proceedings in Docket Nos. AR64-1 and AR64-2. The conference proceedings shall be recorded by the official reporter, and shall be recessed and reconvened at the discretion of the Presiding Examiner. Upon completion of the conference, the Presiding Examiner shall certify to the Commission the transcript of the conference and his report thereon, including such recommendations with respect thereto as he may deem appropriate.

(C) A copy of this order shall be published in the Federal Register and served on each of the persons listed in the appendix hereto.

(D) All additional parties, first designated as respondents by this order, who desire to receive copies of filings made herein by other parties shall, on or before July 13, 1964, so notify the Secretary of the Commission by filing an original and three copies of a notice naming one specific representative to be served on their behalf. Thereafter, the Secretary of the Commission shall promptly advise all participants in the two rate proceedings of all such additional names of representatives to be served by issuing supplements to the Secretary's original service lists issued March 12, 1964, pursuant to paragraph (B) of the Commission's order of January 30, 1964, herein.

(E) Edward B. Marsh, a duly qualified and appointed (as provided by Section 11 of the Administrative Procedure Act) hearing examiner, or his successor legally qualified, appointed and designated, is designated to preside at the consolidated prehearing conference hereinbefore ordered (including all sessions thereof whether continuous or adjourned) and is authorized and directed, in so doing, to exercise all of the functions and authority prescribed by the Administrative Procedure Act and this Commission's Rules of Practice and Procedure thereunder.

Appendix: Additional purchasers, now designated as respondents, who have not heretofore been named as respondents and are not intervenors.

Hugoton-Anadarko Areas—Docket No. AR64-1—Arkansas Louisiana Gas Company, J. C. Wynn d/b/a The Bering Company, El Paso Natural Gas Company, High Plains Natural Gas Company, Kansas Colorado Utilities, Inc., Transwestern Pipeline Company, Western Gas Service Company, Wunderlich Development Company, Zenith Gas System, Inc.

Texas Gulf Coast Areas—Docket No. AR64-2—J. C. Adair, Ben Bolt Gathering Company, Chelletex Corporation, Florida Gas Transmission Corporation, Gas Gathering Corporation, Gulf Resources, Inc., Hydrocarbon Transportation Company, Iroquois Gas Corporation, Lone Star Gathering Company, Manufacturers Light & Heat Company, South Texas Natural Gas Gathering Company, Syljo Gas Company, Texas Gas Pipe Line Corporation.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP61-257 (PHASE II)*

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 22, 1964)

Take notice that on March 30, 1961, as amended on May 19 and October 30, 1961, and September 10, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP61-257 (Phase II) an application pursuant to Section 7 (b) of the Natural Gas Act for permission and approval to abandon by sale to Illinois Power Company (Illinois Power) certain facilities in the State of Illinois, all as more fully set forth in the application, as amended.

Specifically, Applicant proposes in Phase II to abandon 121,422 feet of the 8-inch Galesburg lateral together with its Galesburg meter station. Illinois Power will pay Applicant the depreciated original cost of the subject facilities adjusted to the approximate date of transfer.

Applicant states that the subject proposals are essentially a request to alter the delivery point between Applicant and Illinois Power in order to serve the convenience of both companies.

On August 13, 1962, Central Illinois Electric and Gas Co. filed a petition to intervene in this proceeding; however, on January 28, 1963, said petition was withdrawn.

On August 23, 1962, Illinois Power filed a petition to intervene in this proceeding, however petitioner does not request formal hearing herein and does not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on the intervention petition of Illinois Power appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application (Phase II) has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendments and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is

---

*This application is divided into two Phases. The subject order pertains exclusively to Phase II. By the Commission's order issued January 3, 1964, (Phase I) in this proceeding, Applicant was authorized to abandon certain other lateral pipelines and metering facilities, all located in the State of Illinois, and, further, to construct and operate new measuring and regulating stations made necessary by the authorized abandonment, 31 FPC 11.

subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as amended, in this proceeding (Phase II), be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–134

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 22, 1964)

On March 3, 1964, El Paso Natural Gas Company (El Paso) filed in Docket No. CP64–134 an application to amend the order of the Commission issued February 18, 1964, in Docket No. CP64–134, granting a certificate of public convenience and necessity authorizing among other things the installation and operation of one (1) 330 Hp compressor unit at its Tunstill Compressor Station. El Paso now seeks authorization to install and operate a 495 Hp compressor unit at the Tunstill station in lieu of the 330 Hp unit originally authorized, all as more fully set forth in the application to amend.

El Paso has determined that a suitable 330 Hp compressor unit is not available, and that the nearest rating which can be obtained is a 495 Hp unit which can be installed within the total estimated out-of-pocket project cost of $1,318,500.

Due notice of the filing of the application to amend and opportunity for hearing has been given by publication in the Federal Register on April 9, 1964 (29 F.R. 4982). No protest, petition to intervene or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued February 18, 1964, in Docket No. CP64–134, granting El Paso certain certificate authorizations, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 18, 1964, in Docket No. CP64–134 be and the same is hereby amended by authorizing El Paso to install and operate a 495 Hp compressor unit in lieu of the 330 Hp unit originally authorized, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

UNITED NATURAL GAS COMPANY, DOCKET NO. CP64-223

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 23, 1964)

On April 2, 1964, as supplemented on April 6 and April 20, 1964, United Natural Gas Company (Applicant) filed in Docket No. CP64-223 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 31 miles of 20-inch pipeline from the northern terminus of its 20-inch Line N-Extension near Ellwood City, Pennsylvania, to a point near the junction of its three lines in the vicinity of Mercer, Pennsylvania, all as more fully set forth in the application, as supplemented.

Applicant states that it proposes to purchase from Texas Eastern Transmission Corporation an additional 10,000 Mcf per day starting January 1, 1965, and a further additional 15,000 Mcf per day commencing January 1, 1966,* in order to meet the anticipated increased requirements of its existing wholesale and retail customers. Further, Applicant alleges that its existing transmission system capacity is inadequate to handle these increased purchases of natural gas and that the proposed construction will provide the additional needed capacity.

The application shows the total estimated cost of the proposed facilities to be $2,335,184, which cost will be financed from construction funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G-328 (3 FPC 959).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

*By Commission order issued December 19, 1963, in Docket No. CP64-5 Texas Eastern was authorized to sell such additional volumes to Applicant, 30 FPC 1559.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully set forth in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. G-18419; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. RP64-38

ORDER ACCEPTING PROPOSAL TO REDUCE RATES

(Issued June 23, 1964)

On May 4, 1964, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) and American Louisiana Pipe Line Company (American Louisiana) jointly tendered for filing a proposal to reduce their rates and charges. Briefly summarized, the proposal provides that:

(1) Effective as of April 1, 1964, Michigan Wisconsin will reduce the rates contained in Rate Schedules ACQ-1, SGS-1 and OS-1 to reflect the reduction in its suppliers' rates resulting from the decrease in Federal income tax. The reduction results in decreased rates to jurisdictional customers of approximately $310,000 per annum.

(2) Michigan Wisconsin will reduce the above rates by an additional $310,000 should the Commission authorize Michigan Wisconsin's proposed sale to Wisconsin Public Service Corporation's Weston Generating Station, in Docket No. CP64-109.

(3) Michigan Wisconsin will review its rates in effect on January 1, 1965, to determine whether the reduced Federal income tax which becomes effective on that date necessitates an additional rate reduction at that time.

(4) Both Michigan Wisconsin and American Louisiana shall file such tariff sheets as are necessary, to be effective as of October 1, 1965, to give

effect to the Commission's determinations in Opinion No. 417, *Alabama-Tennessee Natural Gas Company*, 31 FPC 208, issued February 3, 1964, subject to the following terms and conditions:

(a) For the purpose of such filings, the balance in Account No. 282 shall be the amount which is reflected on the companies' books as of October 1, 1965, and the amount attributable to current utilization of liberalization shall be that amount, if any, by which the tax deduction for liberalized depreciation exceeds straight-line depreciation based on the twelve month period ending October 1, 1965;

(b) Should the companies elect to return to straight-line depreciation for tax purposes, they will not have any rate reduction obligation predicated upon the "flow-through" aspect of Opinion No. 417, but the aforementioned treatment of accumulated balances in Account No. 282 in accordance with the provisions of Opinion No. 417, in no way, shall be contingent on the companies' utilization of liberalized depreciation on or after October 1, 1965;

(c) The companies will be entitled to reflect in the filings required by this section, offsetting changes in their costs of service, on an annualized basis, using the twelve month period ending October 1, 1965, as the test period; and

(d) The companies may defer the filings provided for in this section until 20 days after such time as Opinion No. 417 has been affirmed and is no longer subject to judicial review, in which event the companies will make refunds to their customers for the period from and after October 1, 1965, until the date on which the refunds are actually made of the difference between the amounts collected during that period under their effective rates and the amounts collectible under the revised tariff sheets reflecting the principles of Opinion No. 417.

The companies also reserve their rights under the Natural Gas Act including the right to contest the applicability of the principles of Opinion No. 417 to them. Michigan Wisconsin states that it will file tariff sheets to give effect to the rate reduction referred to in Paragraph (1) above within 30 days after approval of the proposal. It is noted that the proposal does not provide for interest on refunds which the companies may choose to defer under Paragraph (4) above. The companies should be required to pay interest on such amounts at the rate of 7 percent per annum as is hereinafter ordered.

The Michigan Public Service Commission, the City of Milwaukee, Wisconsin, Milwaukee Gas Light Company and Wisconsin Public Service Corporation have urged the Commission's approval of the proposal.

The Commission finds:

(1) The proposal filed herein on May 4, 1964, is appropriate and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved and made effective subject to the terms and conditions herein provided and ordered.

(2) Good cause exists for the Commission to waive its applicable rules and regulations under the Natural Gas Act in order that the tariff sheets to be filed under the proposal may become effective as of April 1, 1964, as hereinafter ordered.

The Commission orders:

(A) The proposal filed herein by Michigan Wisconsin and American Louisiana on May 4, 1964, is hereby approved subject to the following terms and conditions.

(B) This order shall not be deemed to release Michigan Wisconsin or American Louisiana from any obligation with respect to refunds or rate reductions under any order now outstanding.

(C) Within 30 days from the issuance date of this order, and subject to the approval of the Commission, Michigan Wisconsin shall file revised tariff sheets to reflect the reduced rates provided for in Paragraph (1) of the proposal and shall refund to its customers the difference between the revenues actually collected pursuant to its currently effective tariff sheets and the amounts which would be collectible pursuant to such revised tariff sheets for the period from and after April 1, 1964, to the date the revised rates are given effect in the bills rendered to their customers.

(D) Michigan Wisconsin and American Louisiana are hereby directed to make such rate reductions and to make such refunds as are required by the provisions of the proposal and to the extent they choose to defer the making of refunds required to be made pursuant to Paragraph (4) of the proposal, they shall pay interest at the rate of seven percent per annum on such refunds from and after October 1, 1965, to the date on which such refunds are actually made.

(E) This order is without prejudice to any findings or orders which have been, or may hereafter be made, by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Michigan Wisconsin, American Louisiana, the Commission Staff, or any other party affected by this order, in any proceeding now pending or any proceeding hereafter instituted by or against Michigan Wisconsin or American Louisiana or any other person or parties affected by this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP64-117, ET AL.

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND TERMINATING CERTIFICATES

(Issued June 24, 1964)

On November 26, 1963, as supplemented on February 3 and March 31, 1964, Atlantic Seaboard Corporation (Applicant) filed an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, acquisition and operation of certain facilities and the activation and operation of a proposed storage field (Storage Field X-77) in Randolph and Pocahontas Counties, West Virginia, and, further, for authority to abandon certain facilities, all as more fully set forth in the application, as supplemented.

The proposed Storage Field X-77 contains an approximate area of 57,200 acres and Applicant proposes to acquire it, together with field facilities and remaining gas reserves, by purchase from Hope Natural Gas Company, Columbian Carbon Company and Columbian Carbon Company, Operator.

Further, Applicant proposes herein: (1) to construct and operate approximately 2.5 miles of 24-inch pipeline; (2) to convert a 1,000 horsepower compressor unit proposed to be acquired herein for the initial storage operation; (3) to construct and operate a 3,960 horsepower compressor station, consisting of three 1,320 horsepower gas engine driven compressor units; (4) to recondition 22 existing wells for utilization in storage operations, and (5) to drill 25 new wells. Applicant also proposes to abandon by retirement the above-described 1,000 horsepower compressor, together with the adjacent measurement facilities, upon completion of construction of the 3,960 horsepower station herein proposed. Further, Applicant will abandon by retirement in 1964 certain well and field lines, measurement facilities and well equipment proposed herein to be acquired.

The application indicates that the proposed field will have top storage capacity of 12,195,000 Mcf and maximum daily withdrawal potential of 240,000 Mcf, when fully developed by 1970.

Applicant states that the estimated market requirements of its existing customers indicate its load factors for gas purchased from its primary supplier, United Fuel Gas Company, will be improved with the activation and operation of proposed Storage Field X-77. Applicant states further that its proposed storage project is necessary to meet the increasing gas requirements of its customers by the most economical and feasible method.

The estimated total cost of the proposed project is shown to be $19,090,818. This amount includes $8,528,070 acquisition costs. The proposed abandonment will result in a total estimated net debit to retirement of $683,583. Financing for the proposed project will be secured through the parent company, The Columbia Gas System, Inc.

In Docket Nos. G-16869, G-17390 and G-16678, Hope Natural Gas Company, United Fuel Gas Company and Columbian Carbon Company, respectively, were issued certificates authorizing the sale and/or exchange of natural gas with Applicant. Such gas was produced from the leases herein proposed to be acquired by Applicant. Therefore, said certificates issued in the aforementioned dockets should be terminated.

A number of petitions to intervene have been filed herein by various interested companies. In all cases, the burden of such filings has been that the petitioners did not request formal hearing in this proceeding and did not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on the various intervention petitions appears necessary.

On April 29, 1964, the Washington Gas Light Company filed a petition to intervene; however, on May 27, 1964, said petition was withdrawn.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 17, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Atlantic Seaboard Corporation, a Delaware corporation, having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1955, in Docket No. G-6500 (14 FPC 692).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, acquisition and operation

thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction, acquisition and operation of the subject facilities and the proposed storage operations by Applicant, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity. and an order authorizing and approving same should be issued as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4), (d) (2), (d) (3), and (e) of Section 157.20 of such Regulations.

(8) It is appropriate and in the public interest that Applicant should be required to submit semi-annual reports as hereinafter ordered.

(9) Maximum storage pressure of 2,050 psig for the proposed field should not be exceeded without further authorization by the Commission.

(10) Public convenience and necessity require that the certificates heretofore issued in Docket Nos. G-16869, G-17390 and G-16678 should be terminated.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Atlantic Seaboard Corporation, to construct, acquire and operate the subject facilities, as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4), (d) (2), (d) (3) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized to be acquired, constructed and operated shall be acquired, constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above is hereby conditioned as follows:

(1) Applicant shall submit semi-annual reports, coinciding with the termination of input and withdrawal cycles, showing total volumes of natural gas injected and withdrawn from the proposed storage field and the stabilized shut-in wellhead pressure of each observation and active storage well. Reports shall be filed until Applicant has completed two injection and withdrawal cycles after the average shut-in pressure approximates the original reservoir pressure of 2,050 psig.

(2) Maximum storage pressure of 2,050 psig for the proposed field shall not be exceeded without further authorization by the Commission.

(E) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(F) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

(G) The certificates heretofore issued in Docket Nos. G-16869, G-17390 and G-16678 are hereby terminated.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

EL PASO ELECTRIC COMPANY, DOCKET NOS. E-6886, E-6933, E-6994

SUPPLEMENTAL ORDER AMENDING ORDERS AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued June 24, 1964)

By orders issued from time to time in the above entitled matter, the Commission, pursuant to Section 204 of the Federal Power Act, authorized El Paso Electric Company (Applicant) to issue up to 101,860 shares of Applicant's unissued no par Common Stock, pursuant to an Employee Stock Purchase Plan. As of May 11, 1964, Applicant had remaining 95,909 shares of unissued Common Stock, no par, reserved for the purpose of the Plan.

In the initial order of the Commission, dated June 18, 1959, in Docket No. E-6886, 21 FPC 837, issuance of Common Stock pursuant to the Plan was limited to the period specified in the Plan, ending June 30, 1964. On May 11, 1964, the Board of Directors of the Applicant extended the termination date of the Plan to June 30, 1969, and Applicant now seeks authority to continue the Plan until that date. No increase in the number of shares to be issued has been requested. According to the application, however, the Employee Stock Purchase Plan has been amended to comply with applicable requirements occasioned by the Revenue Act of 1964.

By order issued May 28, 1964, the New Mexico Public Service Commission approved Applicant's request to extend its Stock Purchase Plan as Amended to June 30, 1969.

As indicated in the previously mentioned orders of the Commission, issued June 18, 1959 and May 11, 1960, notice of this proceeding has been given to the Railroad Commission of Texas and the New Mexico Public Service Commission and to the Governor of each of those States. Notice of the application was also given at the time by publication in the Federal Register (24 F.R. 4676, 25 F.R. 3496). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

Good cause has been shown and it is necessary and appropriate for the purposes of the Act, that paragraphs (A) and (C) of the Commission's order issued June 18, 1959 as heretofore amended be modified as hereinafter provided.

The Commission orders:

Paragraphs (A) and (C) of the Commission's order issued June 18, 1959 in Docket No. E-6886 as amended are further amended to read as follows:

(A) The proposed issuance and sale of Common Stock upon the terms and conditions in the Amended Employee Stock Purchase Plan and for the purposes specified in the application, as described above are hereby authorized, subject to the provisions of this order.

(C) This authorization shall not extend beyond June 30, 1969.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP64–39

ORDER ACCEPTING PROPOSAL TO REDUCE RATES

(Issued June 24, 1964)

Midwestern Gas Transmission Company (Midwestern), on May 11, 1964, tendered for filing a proposal to reduce its rates effective as of March 1, 1964, to reflect the reduction of the Federal Income Tax from 52 percent to 50 percent. The tender proposes a reduction in the commodity component of all rate schedules with the exception of the two-part rate schedules applicable to the Southern System. As to these two-part rate schedules (CD–1 and CDX–1) Midwestern proposes to reflect the change in the demand component of the rate. Midwestern's proposal states that to effectuate the aforementioned reductions it will credit the monthly bill to each customer (beginning with April 1964) by an amount equal to the product of the indicated unit reduction multiplied by the billing demand or commodity volume for each customer for such month.

It is noted that as a result of a settlement agreement in Docket No. RP63–11 which was approved by the Commission by order issued October 30, 1963, Midwestern is currently crediting its customers' bills in a manner similar to that sought here. That order provides that for the period from and after September 30, 1963, Midwestern's reduction of purchase gas from Tennessee shall be reflected "by means of monthly credits on the customers' bills, in effect refunding a portion of the previous month's payments. The monthly credits shall continue until such time as a change in Midwestern's rate level becomes effective."

On May 11, 1964, The Peoples Gas Light and Coke Company (Peoples), a customer of Midwestern's Southern System, filed comments with respect to the proposal herein and stated that the concept of "flowing through" the reduction of purchase gas cost from Tennessee by way of crediting monthly bills as permitted by the October 30, 1963, order, and the concept of "reduction in rates" as set out in the Notice of the instant proceeding, are "two forms of reflection of billing reduction which are distinct concepts under the gas purchase adjustment clause of Peoples' tariff." Peoples requests that if the billing reductions are effectuated and are to be made in the form of reductions of rate, then the billing reductions made by reason of the above mentioned order of October 30, 1963, should also be made in the form of reductions in rates.

It would appear that the instant reduction is the type of a "change in Midwestern's rate level" contemplated by the order of October 30, 1963, and Midwestern therefore should be required to file revised tariff sheets to reflect the decreased rates. It is our further view that Peoples suggestion has merit and that the impact of the crediting of monthly bills permitted by the order issued October 30, 1963, should likewise be required to be reflected in the revised tariff sheets.

The Commission finds:

(1) The proposal filed herein on May 11, 1964, by Midwestern is appropriate and in the public interest in carrying out the Natural Gas Act, and should be approved and made effective subject to the terms and conditions herein provided and ordered.

(2) Good cause exists for the Commission to waive its applicable rules and regulations under the Natural Gas Act in order that the tariff sheets herein required to be filed may become effective as of March 1, 1964, as hereinafter ordered.

The Commission orders:

(A) The aforementioned proposal is hereby approved subject to the terms and conditions herein set out.

(B) Within 30-days from the issuance date of this order, Midwestern shall file revised tariff sheets, subject to the approval of the Commission, to be effective as of March 1, 1964, reflecting the rate level as of that date as a result of the order issued October 30, 1963, in Docket No. RP63-11 and this order.

(C) Concurrently with the filing of the revised tariff sheets required by Paragraph (B) hereof, Midwestern shall file a tabulation setting out all the credits to its customers' bills made pursuant to the aforementioned Commission order issued October 30, 1963, and under the proposal herein approved.

(D) This order is without prejudice to any findings or orders which have been, or may hereafter be made by the Presiding Examiner or the Commission in Docket Nos. RP61-19, RP62-7, and RP63-6.

(E) This order is also without prejudice to any findings or orders which have been or may hereafter be made, by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Midwestern, the Commission Staff or any other party affected by this order, in any proceeding now pending or any proceeding hereafter instituted by or against Midwestern, or any other person or parties affected by this order.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60-14

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 25, 1964)

On January 21, 1964, as supplemented on February 19, 1964, United Gas Pipe Line Company (Applicant) filed an application to amend further the Commission's order issued August 11, 1960, in Docket No. CP60-14, as amended, by authorizing Applicant to transport and deliver a total maximum daily volume of 30,500 Mcf of natural gas to Escambia Chemical Corporation (Escambia) in lieu of the 26,500 Mcf heretofore authorized by said order, as amended, all as more fully set forth in the application to amend, as supplemented.

The order of August 11, 1960, as amended, authorized Applicant, among other things, to construct and operate certain facilities and to increase to 26,500 Mcf the maximum daily deliveries of natural gas to Escambia.

The application, as supplemented, indicates that natural gas is used by Escambia in its chemical processing plant near Floridatown, Florida. The total proposed volumes will be used for process purposes in the ammonia and methanol plants, in direct fired units and for steam generation for process purposes.

It appears that there is sufficient capacity in the presently authorized facilities to render the proposed increased service.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 20, 1964 (29 F.R. 6574). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued August 11, 1960, in Docket No. CP60-14, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 11, 1960, in Docket No. CP60-14, as amended, be and the same is hereby further amended by authorizing Applicant to transport and deliver a total maximum daily volume of 30,500 Mcf of natural gas to Escambia Chemical Corporation in lieu of the 26,500 Mcf heretofore authorized by said order, as amended, all as hereinbefore described and as set forth in the application to amend, as supplemented.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7161

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS AND PREFERRED STOCK

(Issued June 25, 1964)

By order issued June 10, 1964, in the above-entitled matter, the Commission authorized Sierra Pacific Power Company (Applicant) to issue and sell at competitive bidding $7,000,000 principal amount of First Mortgage Bonds ——%, Series due June 1, 1964, and to issue and sell at competitive bidding 100,000 shares of Preferred Stock, par value $50 per share, subject to the provisions, among others, set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of First Mortgage Bonds and Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission shall have approved by a further order, the interest rate and the price to be received by Applicant for the proposed issuance of First Mortgage Bonds and the dividend rate and the price to be received by Applicant for the proposed issuance of Preferred Stock.

Applicant, on June 24, 1964, filed an amendment, pursuant to the requirements of the aforementioned Commission, in which it states, among other things, (1) that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Stone & Webster Securities Corporation and Dean Witter & Co. to purchase the proposed issuance of $7,000,000 principal amount of Bonds, at the price of 100.64 of principal amount, with an interest rate of 4¾% per annum; and (2) that it proposes to accept as representing the lowest cost of money, the bid of Eastman Dillon, Union Securities & Co. to purchase the Preferred Stock, par value $50 per share at a price of $50.02 per share and an annual dividend of $2.36.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in Paragraph (B) of the Commission's order issued June 10, 1964, in the above-entitled docket; and under the respective bids it proposes to accept for the issuance of Bonds and Preferred Stock (a) the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable; and (b) the price per share to be received by Applicant for the Preferred Stock and its dividend rate are reasonable.

(2) The proposed issuance and sale of Bonds and Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof, and the price per share to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereof, are approved as reasonable.

(B) The proposed issuance and sale of Bonds and Preferred Stock referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraphs (C), (D) and (E) of the Commission's order issued June 10, 1964, in the above docket.

Before Commissioners: Harold C. Woodward, Acting Chairman; Charles R. Ross and David S. Black.

MORGAN MINERALS CORPORATION (OPERATOR), ET AL.

ORDER ACCEPTING OFFER OF SETTLEMENT, AND REQUIRING FILING OF CONTRACT AMENDMENT

(Issued June 26, 1964)

On May 28, 1964, Morgan Minerals Corporation (Operator), *et al.* (Morgan) submitted offers of settlement pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offers involve proposed increased rates for sales of natural gas made to Valley Gas Transmission Inc. by Morgan. The offer relates to sales made under Morgan's FPC Gas Rate Schedule Nos. 4, 5, and 6 in Duval County, Texas (Texas R.R. Com. District #4). Under the terms of the offers, Morgan proposes to eliminate the periodic escalation provisions from its rate schedules and to establish a 15¢ per Mcf rate for the subject sales. No protests or objections have been filed to the offers.

Concurrently, Morgan filed notices of change in rates to 15¢ per Mcf under each of the subject rate schedules to be effective June 28, 1964.

The proposed settlements are consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and their acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Morgan's offers of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Morgan's rates and rate schedules.

The Commission finds:

The proposed settlement, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Morgan on May 28, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Morgan on May 28, 1964, are hereby approved in accordance with the provisions of this order.

(B) Morgan shall file, within 30 days from the date of issuance of this order, executed contractual amendments to its FPC Gas Rate Schedule Nos. 4, 5, and 6, eliminating the periodic escalation provisions therefrom. The contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notices of change in rates filed May 28, 1964, under Morgan's FPC Gas Rate Schedule Nos. 4, 5, and 6, are hereby accepted for filing, subject to the terms and conditions of this order.

(D) Upon notification by the Secretary of the Commission that Morgan has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offers of settlement shall be effective as of June 28, 1964.

(E) The acceptance by the Commission of Morgan's offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Morgan, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EQUITABLE GAS COMPANY, DOCKET NO. CP62–186

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 26, 1964)

On June 1, 1964, as supplemented on June 23, 1964, Equitable Gas Company (Applicant) filed an application to amend the Commission's order issued

June 29, 1962, in Docket No. CP62-186 so as to extend to June 29, 1965, the time in which to complete and place in actual operation the facilities authorized by said order, all as more fully set forth in the application to amend, as supplemented.

The order of June 29, 1962, authorized Applicant to construct and operate certain facilities for the operation of a proposed storage field, the Mobley Storage Field, located in Wetzel County, West Virginia. Among other facilities, Applicant was also authorized to construct and operate 9 miles of 12-inch pipeline extending from a point of connection located at Applicant's Logansport Storage Pool to a point of connection with its present transmission system. All of the authorized facilities were to be completed and placed in actual operation within 24 months from the date on which the subject order issued.

Applicant states that it has completed and placed in actual operation all of the authorized facilities except the above-described 12-inch line. Applicant states further that in its opinion the construction of said line should not be commenced until the geological data with respect to the Mobley Field, particularly as they relate to well pressures and daily input and withdrawal rates, are more nearly complete. Accordingly, Applicant requests a one year extension of time to June 29, 1965.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued June 29, 1962, in Docket No. CP62-186 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued June 29, 1962, in Docket No. CP62-186 be and the same is hereby amended to extend to June 29, 1965, the time in which to complete and place in actual operation the facilities heretofore authorized in this proceeding, all as hereinbefore described and as set forth in the application to amend, as supplemented.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64-218 (PHASE I)

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 26, 1964)

On March 30, 1964, as supplemented on May 1, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP64-218 (Phase I) an application pursuant to Section 7 of the Natural Gas Act for authorization to abandon in place 90.5 miles of 24-inch line, known as its Kentucky No. 1 Line, and for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, all as more fully set forth in the application, as supplemented, (Phase I).

Applicant states that it desires to abandon the Kentucky No. 1 Line because said line was constructed in 1944 and since that time Applicant has experienced difficulty due to excess corrosion of the pipe.

Applicant states further that to obtain the same design day capacity as currently exists with the Kentucky No. 1 Line, it requests authorization to construct and operate the following facilities:

(a) Approximately 50.76 miles of 30-inch pipeline between Compressor Station 110, near Morehead, Kentucky, and Compressor Station 114, near Catlettsburg, Kentucky,[1] and

(b) Approximately 23 miles of 36-inch pipeline loop around Compressor Station 110.

Additionally, Applicant proposes to construct and operate an additional river crossing of the Mississippi River in East Carroll Parish, Louisiana, and an additional river crossing of the Cumberland River in Cheatham County, Tennessee. Applicant states that these two river crossings are necessary to provide greater assurances of continuity of service to its customers.

The estimated cost of the proposed facilities in Phase I is approximately $13,225,700, which cost will be financed by the use of revolving credit.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G-910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding (Phase I), are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

---

[1] These facilities will be in lieu of 50.76 miles of 26-inch line authorized in Docket No. G-11107, but not yet constructed.

(6) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP64-218 (Phase I), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP64-218 (Phase I), be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E-7090

ORDER GRANTING MOTION

(Issued June 26, 1964)

By order dated April 16, 1963, the Respondent was requested to show cause why it should not file certain of the Company's wholesale rates pursuant to Section 205 of the Federal Power Act. A hearing, initially scheduled for June 24, 1963, has been postponed from time to time and is now scheduled for June 29, 1964.

By Motion for Postponement filed June 16, 1964, Respondent indicates that while the Company believes that the afore-mentioned rates are not jurisdictional, it proposes to undertake to file rate schedules therefor in the event that this proceeding results in jurisdictional determinations adverse to the Company's contentions, and states that it proposes to tender the rates at issue as initial rates. Respondent cites Commission Order No. 282 (issued April 21, 1964) and requests a postponement of this proceeding until September 9, 1964 to complete work antecedent to those submittals. Respondent supports its request citing additional time needed to "prepare the contracts, rate schedules, related billing data and other data required by the Commission's Regulations" under the Federal Power Act. Respondent further notes that Commission staff has completed a proposed form of stipulation (together with exhibits) of factual data bearing upon the issues here before the Commission. Respondent states that in the event the parties are able to resolve any of the factual issues in such manner the hearing will be materially shortened, but in any event the Company does not propose to seek further continuances of this matter beyond September 9, 1964.

In view of the fact that a proposed stipulation of fact in this case was served by staff upon petitioner on June 19, 1964, which if agreed to in whole or in part would materially shorten the hearing, we believe the requested postponement is appropriate. Nor will the prospective filing of petitioner's rate schedules together with a reservation of jurisdiction in accordance with Order No. 282, in any way moot the proceeding or deprive petitioner of a right to court review.

The Commission further finds:

It is appropriate for the purposes of the Federal Power Act that the hearing in this matter be postponed as hereinafter ordered.

The Commission orders:

The hearing previously scheduled for June 29, 1964, is hereby adjourned to commence on September 9, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. G-12193, ET AL., AND G-12401

ORDER FURTHER AMENDING ORDER APPROVING RATE SETTLEMENT PROPOSAL

(Issued June 26, 1964)

By order issued May 5, 1964, as amended by order issued May 28, 1964, we approved a rate settlement proposal filed in these proceedings by Socony Mobil Oil Company, Inc. (Socony) on March 30, 1964. Based thereon Socony is required to refund approximately $12 million to its various purchasers within sixty days of the May 5 order. Under the terms of paragraphs (E) and (F) of the order Socony is also required within sixty days to make the rate filings necessary to effectuate the terms of the settlement and to file a report of the amount of refund made to each of its purchasers, together with releases from its purchasers showing receipt of refunds.

Socony on June 23, 1964, requested an extension of thirty days from July 6, 1964, within which to comply with the provision of the May 5 order. In support thereof Socony states that the required contract amendments have not yet been finalized and the detailed accounting work involved in computing amounts to be refunded cannot be accomplished within the allotted time. Under the circumstances, we think good cause exists for granting Socony's request for additional time within which to comply with our May 5 order.

Under the refund provisions of our May 5 order, Socony is required to refund certain sums of monies to United Gas Pipe Line Company (United).

United, in turn, is required to flow through under outstanding Commission orders such refunds to its purchasers. Some of United's pipeline purchasers may take the position that they are not under obligation to flow through to their jurisdictional customers their proportionate share of the amount they will receive from United. For the reasons set forth in our order in *Hunt Oil Company*, Docket No. G-9065, *et al.*, issued July 16, 1963, 30 FPC 220, we shall require Socony to retain the refunds due United, subject to further order of the Commission, and shall (in a separate order to be later issued), require United's pipeline purchasers to submit a report setting forth their intentions with respect to any refunds they may receive, and, if they do not intend to pass such sums on to their customers, why they believe they are entitled to receive such funds.

Socony may elect, at its option, to either use these funds in its business and pay 6¢ interest thereon or to deposit such funds in a special escrow account for the sole benefit of the ultimate owners of such refunds and credit all interest actually earned thereon to the escrow account.

The Commission orders:

(A) For the reasons set forth above, Socony is hereby granted an additional thirty days from July 6, 1964, within which to comply with the provisions of ordering paragraphs (E) and (F) of the order issued May 5, 1964, in the above-entitled proceedings.

(B) The order issued May 5, 1964, in these proceedings hereby is amended so as to require Socony to retain the refund together with the interest thereon, due to United, pending Commission action and further order respecting such monies. The amount of such refunds shall be computed in accordance with Paragraph (F) of the May 5 order.

(C) If Socony elects to commingle these funds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from August 5, 1964, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(D) If Socony elects to deposit the refunds due to United in a special escrow account, Socony shall tender for filing on or before August 5, 1964, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon United. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof the Escrow Agreement shall deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Socony and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Socony, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or

in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64-1, ET AL.

ORDER ENLARGING ISSUES

(Issued June 29, 1964)

Notice is hereby given that the Commission intends to enlarge the issues to be considered in the above-proceeding to include consideration of the extent to which, if any, the rates or cost allowances for pipeline gas production should be regulated on an area basis.

In pipeline company rate cases now arising under Sections 4 and 5 of the Natural Gas Act the Commission determines the allowance for the on-system supply produced by the pipeline or its affiliates on an individual company cost-of-service basis. See *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC), certiorari denied, 352 U.S. 829; *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619 (CADC), certiorari denied, 355 U.S. 904.

The area rate proceedings now under way involve all rate issues pertaining to off-system sales of gas produced by pipeline companies or their affiliates. The Commission has reserved for decision in such proceedings contentions that such off-system sales should be treated otherwise than in the manner applicable to independent producer sales. Opinion 414-A, *Union Producing Co.*, 31 FPC 503 (March 6, 1964).

It has been repeatedly urged upon the Commission that it would be in the public interest to determine the allowance for all pipeline production, on-system as well as off-system, on an area basis and that the comprehensive records in area rate proceedings now in progress will provide legal basis for any such determination within the meaning of the *City of Detroit* and *Mississippi River Fuel* cases, *supra*. The Commission's consideration of the legal and policy considerations underlying such contentions would be greatly aided by a full record made in an appropriate proceeding.

While we have given consideration to initiating a new and separate proceeding for this purpose, we have concluded that proposals to change the present policy can most appropriately and expeditiously be considered in the Hugoton-Anadarko area rate proceeding (Docket No. AR64-1). This will provide us with a factual context for our determination in an area which, because it has long been associated with pipeline gas production, is peculiarly useful for evaluating the various problems presented by any shift to an area rate method of treating pipeline production. Proponents and opponents of a change and all interested parties may there present reasons supporting or opposing (i) area rate treatment of all pipeline production on a basis identical with that afforded independent producers; (ii) area rate treatment of all pipeline production on a basis recognizing some differences as compared with the treatment afforded independent producers; (iii) area rate treatment for some pipeline production, such as "new vintage" gas, but not all pipeline production; (iv) area rate treatment for "off-system" but not "on-system" pipeline production or (v) individual cost of service treatment for "off-system" as well as "on-system" pipeline production. The foregoing list is not intended to circumscribe the consideration of other policies which may be urged by the parties. We do not, of course, prejudge any of these issues; the Commission has not arrived at a new policy, even tentatively; rather we invite a thorough development of the facts and ventilation of the issues on this record so that we may better formulate policy in the future.

In view of the broadening of the issues we will accept new petitions to intervene (denominating the nature of the parties' interest) filed on or before July 16, 1964. The question as to the best way in which evidence and briefs on pipeline production can be fitted into the over-all area proceeding we shall leave for consideration at the prehearing conferences in this proceeding for which we have separately provided.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7164

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE SINKING FUND BONDS

(Issued June 29, 1964)

Montana-Dakota Utilities Co. (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of Minnesota, Montana, North Dakota, South Dakota and Wyoming, with its principal business office at Minneapolis, Minnesota, filed an application on May 18, 1964, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $12,000,000 principal amount of First Mortgage ——% Sinking Fund Bonds, Due July 1, 1984.

Applicant proposes to issue the new Bonds under the provisions of its Indenture of Mortgage to The New York Trust Company (now Chemical Bank New York Trust Company) and A. C. Downing, (succeeded by John H. Baile), as trustees, dated as of May 1, 1939, as heretofore supplemented and amended and as to be further supplemented by a Twenty-fourth Supplemental Indenture to be dated July 1, 1964.

Applicant proposes, on or about July 7, 1964, to invite sealed, written bids for the proposed issuance of $12,000,000 First Mortgage ——% Sinking Fund Bonds, by distribution of a Form of Proposal, together with a Statement of Terms and Conditions relating thereto and a form of Purchase Contract. Each bid, whether made by a single bidder or a group of bidders, must be for the purchase of all the $12,000,000 First Mortgage ——% Sinking Fund Bonds, and must be in writing on the Form of Proposal provided by the Applicant and each bid will be accepted or rejected in its entirety. Each bid must specify: the coupon rate, which shall be a multiple of ⅛ of 1% to be borne by the Bonds and the price, exclusive of accrued interest, to be paid to the Company for the Bonds, which price shall be expressed as a percentage of the principal amount of the Bonds, not, however, less than 99% thereof; and that the Applicant shall be paid the amount of the accrued interest from July 1, 1964 to the date of payment therefor and delivery thereof. Each bid must be accompanied by a certified or bank cashier's check or checks, payable in New York Clearing House funds to the order of Applicant, in an aggregate amount equivalent to 3% of the principal amount of Bonds to be purchased by it.

Unless postponed, all the bids for the purchase of the $12,000,000 First Mortgage ——% Sinking Fund Bonds must be received by the Applicant prior to 11:00 a.m., New York Time, on July 15, 1964, at the Offices of Chemical Bank New York Trust Company, Tenth Floor, 20 Pine Street, New York 15, New York. The Applicant reserves the right to reject all bids or to accept a bid for the $12,000,000 First Mortgage ——% Sinking Fund Bonds, and to exclude a bid or bids for reasons specified in the Statement of Terms and Conditions. Applicant will accept the bid for the Bond Issue which provides it with the lowest annual cost of money.

The net proceeds from the proposed issuance of Bonds will be used (1) to provide for the payment of $6,500,000 of promissory notes due in 1964, which were issued in 1963 to provide temporary financing for part of the cost for constructing additions to Applicant's gas and electric facilities during the year 1963, as authorized in Docket No. E-7105, and (2) to provide for part of the cost of Applicant's 1964 construction program. Applicant's 1964 construction budget totals $10,000,000 of which $5,000,000 is estimated for electric facilities, $4,600,000 for gas, and $400,000 for common utility property. Of the $5,000,000 scheduled for electric facilities, $300,000 has been budgeted for production plant, $2,500,000 for transmission facilities, $2,100,000 for distribution facilities and $100,000 for general plant.

Authority to construct certain of the gas facilities under the Natural Gas Act has been granted heretofore (Docket Nos. CP64-247 and CP63-110). The other facilities requiring approval will not be constructed until authority has been granted under the Natural Gas Act.

According to the application, internally, generated funds will provide at least $5,000,000 towards Applicant's 1964 construction program leaving a balance of approximately $5,000,000 to be provided from the sale of proposed Bonds. Applicant states that any excess funds available from the sale of the Bonds (after paying the short-term loans of $6,500,000 and applying approximately $5,000,000 to the 1964 construction program) will be added to the general funds of the Company.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, Montana Board of Railroad Commissioners, North Dakota Public Service Commission, South Dakota Public Utilities Commission, Wyoming Public Service Commission, and to the Governors of those States. Notice has also been given by publication in the Federal Register on June 3, 1964 (29 F.R. 7257), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 11, 1964, with the Federal Power Commission, Washington, D.C. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued April 26, 1962, *Montana-Dakota Utilities Co.*, Docket No. E-7027.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuances of securities are, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(5) The period of public notice herein is reasonable.

The Commission orders:

(A) The proposed issuance and sale of $12,000,000 First Mortgage ——% Sinking Fund Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-209

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1964)

El Paso Natural Gas Company (El Paso) filed in Docket No. CP64-209 an application on March 23, 1964, pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities, the acquisition of other facilities from Southern Union Gas Company (Southern Union), the transportation of natural gas, and the sale and delivery of natural gas in interstate commerce to Southern Union for resale in the area of Mineral Park, Mohave County, Arizona, all as more fully set forth in the application on file with the Commission.

El Paso proposes (1) to construct and operate a dual 4½-inch O.D. orifice-type measuring station, and necessary appurtenances adjacent to its San Juan Mainline in the SE¼ of Section 13, Township 21 North, Range 16 West, G. & S. R. M., Mohave County, Arizona, (2) acquire from Southern Union and operate approximately 5.34 miles of 6⅝-inch and 7.05 miles of 4½-inch pipeline out of a total of approximately 21.5 miles of 6⅝-inch and 4½-inch pipeline proposed to be constructed by Southern Union, and extending from El Paso's measuring station to the Mineral Park area of Mohave County, Arizona, and (3) transport, and sell natural gas in interstate commerce to Southern Union for further transportation and sale to Citizens Utilities Company (Citizens) and the Duval Corporation (Duval) for electric generating and processing purposes, respectively.

The deliveries of natural gas by El Paso to Southern Union will be made at the terminus of the pipeline segment to be acquired by El Paso. The maximum daily and annual gas requirements of Southern Union for the Citizens and Duval service are estimated to be 2200 Mcf and 800,000 Mcf and 260 Mcf and 100,000 Mcf, respectively.

El Paso and Southern Union have undertaken the project leading to the introduction of natural gas into the Mineral Park area, at a cost of approximately $200,000 to El Paso, to be defrayed from El Paso's current funds or short-term bank loans if necessary and $116,500 to Southern Union.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The proposed acquisition of facilities from Southern Union, the construction and operation of facilities, the transportation, and sale of natural

gas in interstate commerce, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed acquisition of facilities, construction and operation of facilities, transportation, and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) El Paso is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to El Paso in this proceeding authorizing the acquisition of facilities, from Southern Union, the construction and operation of facilities, and the transportation, and sale of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities and acquisition authorized by paragraph (A) above shall be effected, constructed and placed in operation within 12 months from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP64-235

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1964)

On April 13, 1964, Florida Gas Transmission Company (Applicant) filed in Docket No. CP64-235 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing July 1, 1964, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission system, said construction not to exceed a maximum total cost of $1,500,000, with no single project to exceed a cost of $300,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Applicant proposes to finance the cost of the subject facilities out of short-term bank loans in the event the required funds are not available from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262 and G-9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in Paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing July 1, 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,500,000, with no single project to exceed a cost of $300,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct during the 12-month period commencing July 1, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Florida Gas Transmission Company.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing July 1, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,500,000, with no single project to exceed a cost of $300,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64–242

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1964)

On April 16, 1964, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP64–242 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing July 13, 1964, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which may be purchased from producers in the general area of its existing transmission system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The application states that the total cost of the proposed facilities will not exceed $3,000,000, and no single project will exceed a cost of $500,000. The facilities are to be financed with cash generated out of operations, and it will not be necessary to undertake any new financing for this purpose.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as hereto-

fore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) actual final costs, (b) description of the project or projects, (c) location of facilities constructed or relocated, and (d) reason for such work to be performed.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing July 13, 1964, and the total expenditures for facilities so constructed should be limited to a maximum of $3,000,000 with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Wisconsin Pipe Line Company, to construct during the period commencing July 13, 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the period commencing July 13, 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CIMARRON TRANSMISSION COMPANY, DOCKET NO. CP64-264

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1964)

On April 29, 1964, as amended on May 21, 1964, Cimarron Transmission Company (Applicant) filed in Docket No. CP64-264 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing on the date of issuance of such authorization and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application, as amended.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $100,000, with no single project to exceed a cost of $20,000, which costs will be financed from funds on hand, from cash generated by operations, from internal sources and from financing already arranged.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, as amended, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cimarron Transmission Company, a Delaware corporation having its principal place of business in Tulsa, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued December 17, 1959, in Docket No. G-17014 (G-16911, *et al.*, 22 FPC 1059, 1066).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date on which this order issues and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $100,000, with no single project to exceed a cost of $20,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cimarron Transmission Company, to construct during the 12-month period commencing on the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure, as amended.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted by paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $100,000, with no single project to exceed a cost of $20,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended, is hereby granted.

OPINION NO. 433

BLACK HILLS POWER AND LIGHT COMPANY, DOCKET NO. E-7046

OPINION AND ORDER DENYING AUTHORITY FOR ISSUANCE OF COMMON STOCK

(Issued June 30, 1964)

*Syllabus**

1. Under Section 204(a) of the Power Act, Commission must give first consideration to object or purpose of stock issue; secondly to its use as means of accomplishing same. P. 1608.

---

*Initial Decision appears on P. 1619.

2. **Respecting object or purpose of stock issue, Commission must determine that: (1) it is lawful; (2) it is within corporate purposes of applicant; (3) it is compatible with public interest; and (4) it is necessary, appropriate for, or consistant with, proper performance by applicant of service as public utility and will not impair its ability to perform such service - - respecting use of such issue as means of accomplishing that object or purpose, Commission must determine it is reasonably necessary or appropriate to that end. PP. 1608, 1609.**
3. **Instant record raises serious questions of compatibility of stock option plans of public utilities with responsibilities of a regulated enterprise under Power Act. P. 1611.**
4. **Commission is not of opinion that executive stock options are prohibited by Section 305(a) of Power Act - - public utility is free to apply for approval thereof if it believes proposal can be justified under Section 204(a). P. 1611.**
5. **Applicant's plan fails to meet plain purpose of Section 204, which is to prevent issuance of securities which might impair company's financial integrity or its ability to perform its public utility responsibilities. P. 1611.**
6. **Electric utilities are public service companies serving under franchises and certificates granted by government agencies; they possess power of eminent domain and other special privileges not available to ordinary companies. P. 1611.**
7. **Function of regulatory agencies is to exercise positive influence on welfare and growth of electric industry by controlling rates and profits and focusing attention of management on its public service responsibilities. P. 1611.**
8. **Incentives under stock option plans, tend naturally to divert management from its public responsibilities and to focus its attention on maximizing prices and earnings in order to push stock quotations ever higher. P. 1611.**
9. **In non-regulated industry ostensible reason for stock option plans is simple - - to maximize profits. P. 1611.**
10. **Goal of regulated industry must be effectiveness in performance of public service; measure of its executive endeavor is and must remain not judgment of stock market on present and future profits, but success in providing service upon which entire economy is dependent. P. 1612.**
11. **An over-riding personal stake in stock market is doubtfully compatible with public service responsibilities of public utility management - - stock option plans do not lend themselves to a balanced management attitude. P. 1612.**
12. **Record here affords no basis for concluding that there is any positive relationship between companies in vanguard of electric power industry on technology and policy levels and those which have adopted stock option plans. P. 1612.**
13. **Evidence showing consensus of judgment within industry that stock options are not necessary or appropriate for public utilities is to be respected and weighed against management's views here. P. 1612.**
14. **Stock option plans for public service company are objectionable since they: (1) disguise extent of managerial compensation and thus make it easy for top managers to receive excessive compensation; (2) usually prefer top executives and ignore important role of lower and middle management group; (3) lead to executive compensation which is often**

irrational; erratic and unrelated to executive performance; (4) tend to make management focus more on common stock prices than on company's service obligations; and (5) impact is to dilute equity of company." PP. 1612, 1613.

15. General rule for regulated companies is that each generation of consumers pays its own way as costs are incurred — consumers of today should not pay for services provided in past nor later generations of consumers pay for current services. PP. 1613, 1614.

16. Stock options are form of deferred compensation which impose share of burdens of compensating present management upon stockholders and consumers at later date when options are exercised. P. 1614.

17. Commission concern here is limited to determination of whether stock option plan meets standard set by Section 204(a) of Power Act. P. 1614.

18. Evidence here fails to establish applicant's case for restricted stock option plan. P. 1614.

19. Use of stock option as device for executive compensation is not consistent with proper performance by utility of its public service obligation since they, (1) involve "no-cost" method of accounting; (2) actual costs are hidden from shareholders and consumers; (3) reward may have little, if any, relationship to value of executive performance; (4) conflict of interest may be created in duty of those optionees who establish company's rate policy and (5) normal option growth tends to dilute company equity. P. 1614.

20. In proceeding under Section 204 of the Federal Power Act, Commission *denies* restricted stock option plan as not compatible with public interest.

Commissioner O'CONNOR *dissenting*, joined by Commissioner WOODWARD.

H. R. Hanley, for Black Hills Power and Light Company.

Wallace E. Brand and *Leonard Eesley* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SWIDLER, *Chairman:*

This case involves an application by Black Hills Power and Light Company (Black Hills or applicant) for authorization under Section 204 of the Federal Power Act to issue and sell up to 10,000 shares of common stock to executives and key employees under a Restricted Stock Option Plan approved by the Black Hills stockholders in April 1962.[1] In June 1962, options to purchase 7,400 shares were granted to 16 key officers and employees at a price of $37.25. Options on 2,600 shares were reserved for future use.

Briefly, the plan provides for the issuance and sale of up to 10,000 shares of optioned stock prior to February 1, 1982. Options for terms of up to ten years may be granted at any time before February 1, 1972. The price for the optioned shares, which is fixed at the time of issue of the option, is to be not less than 95 percent of the market price of the stock on the date of the grant, the limit provided in the Internal Revenue Code of 1954 for realization of the full tax benefit under Section 421. The options are exercisable only by the grantees during their respective lifetimes (or in the event of death by their heirs within one year); are not exercisable for one year from the date of grant; and are exercisable to the extent of 25 percent of the optioned shares for each year after the first year, provided the grantee remains in the employ of the applicant or a subsidiary. The plan is to be administered by a committee comprised of members of the Board of Directors.[2] This committee will determine when and to which employees options shall be granted.

---

[1] The recent amendments to the Internal Revenue Code, Sections 421–425, 78 Stat. 19, 63–71, placing further limitations on the terms of stock option plans for income tax purposes would necessitate some changes in the instant application.

The application was filed July 23, 1962, in accordance with our rules but without detailed information as to the justification for the plan. The Commission initially disposed of the application without hearing, denying approval of the applicant's plan by a vote of three to two.[3] The Commission found that:

> * * * where a company proposes to sell stock for purposes other than the raising of needed funds, and particularly where the beneficiaries are top management officials of the Company, we should authorize the proposal, if at all, only after a comprehensive showing that the proposal, in its mode of operation as well as basic intent, is reasonably necessary or appropriate to achieve some lawful object of the Company and otherwise compatible with the public interest.[4]

On January 24, 1963, Black Hills applied for rehearing, indicating that it was prepared to show that the criteria of Section 204 had been met. Rehearing was granted February 21, 1963, and a hearing was ordered so that both the applicant and the Commission staff might have an opportunity to introduce comprehensive evidence. The hearing was held in June 1963, and on November 26, 1963, the presiding examiner issued his initial decision (1) authorizing the issuance and sale of 7,400 shares upon condition that the option price be changed from $37.25 per share to not less than $43.60 per share, and (2) denying authorization for the remaining 2,600 shares without prejudice to the filing of further applications at such times as options for such stock are granted. Exceptions to the examiner's decision were filed by staff, and the applicant filed a reply to staff's exceptions.

The issues in this case are framed by the provisions of Section 204 of the Act, under which the Commission is empowered to authorize the issuance of securities by a public utility. Section 204(a) provides:

> No public utility shall issue any security * * * unless and until, and then only to the extent that, upon application by the public utility, the Commission by order authorizes such issue or assumption of liability. The Commission shall make such order only if it finds that such issue * * * (a) is for some lawful object, within the corporate purposes of the applicant and compatible with the public interest, which is necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility and which will not impair its ability to perform that service, and (b) is reasonably necessary or appropriate for such purposes.

Under the criteria set forth in the quoted paragraph, the Commission must give consideration first to the object or purpose of the stock issue, and second to its use as a means of accomplishing that object or purpose. With respect to the object or purpose, the Commission must determine the following: (1) that it is lawful; (2) that it is within the corporate purposes of the applicant; (3) that it is compatible with the public interest; and (4) that it is necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility and will not impair its ability to perform that service. With respect to using a stock issue as a means of accomplishing that object or purpose, the Commission must determine that it is reasonably necessary or appropriate to that end. Unless the Commission can make these statutory findings, the application must be denied.

---

[2] Article III of the plan provides that neither the members of the committee nor any member of the Board of Directors who is not an officer or employee of the company shall be eligible for options under the plan.

[3] 28 FPC 1121 (1962).

[4] *Id.* at 1125.

Although applicant indicates that it will utilize the net proceeds from the stock sales for additions and improvements to its properties, the stock option plan is not designed to secure additional capital. The fundamental and admitted purpose of the issue is to provide for additional compensation for key executives beyond present salaries by allowing optionees to purchase stock, at a discount and under favorable tax conditions, and to share in company profits through dividends and capital gains. The plan purports to provide an incentive for such personnel to remain with the company and for qualified new people to seek employment. The issue in this case is whether this plan is compatible with the public interest within the meaning of Section 204.

The Commission staff raises serious questions with respect to (a) the compatibility of stock options with the public interest, (b) their consistency with the performance of the applicant's services as a public utility, and (c) the reasonable necessity or appropriateness of using stock options to accomplish the stated purpose of the plan. Staff's objections are directed both to Black Hills' specific proposal and to all Restricted Stock Options Plans for regulated public utilities.

The applicant presented three witnesses who urged the approval of stock options as a means of executive compensation. They stated that the option plan was adopted only after prolonged study of the need to retain and attract key personnel and of the possible alternative methods of providing the necessary incentive; and that it was approved at the annual meeting of stockholders held on April 10, 1962. Further, they noted that the plan has since been favorably received by the optionees. They testified that the option plan offers benefits to both the optionees and the company which are absent in increased salary compensation, and that the company is already paying salaries as high as its economics will permit. The witnesses emphasized that Black Hills is a small company, operating in a rugged terrain and in competition with the service furnished by rural cooperatives, as well as with natural gas service; that the company needs an aggressive management to insure its growth and prosperity; that, being a small company, key personnel have broad responsibilities, thus making the company dependent upon their services at the same time that their broad experience made them highly attractive to other companies looking for executive talent; and that Black Hills must compete for managerial and executive talent with companies paying higher salaries and offering employee stock options. They also presented testimony to show that consideration was given to the impact of the stock options on the company's financial situation; that, since the option price exceeds the book value of the outstanding shares, in their view there would be no impairment of the capital structure; and that the number of shares subject to options is small in relation to the number of outstanding shares, thus precluding the possibility of any serious dilution of the per-share earnings or of any substantial adverse impact on the cost of equity capital and the rates charged to the company's utility customers, pointing out that the proposed issue of 10,000 shares represents 2.22 percent of the approximately 450,000 shares currently outstanding.

Staff's presentation, while directed to the specific proposal by Black Hills was designed also to show that public utilities generally should not be permitted to use Restricted Stock Option Plans. The staff witness took the position that the inevitable inability to determine the cost of such plans violates public utility accounting principles and frustrates regulatory supervision and control; and that because of the difficulty of evaluating the dollar impact of such plans, executives may be inclined to a philosophy in which they would be preoccupied with obtaining excessive compensation to the detriment of both consumers and shareholders. He stated that there is no direct relationship between executive efficiency and stock market prices for regulated utilities, so that it cannot be assumed that the stock option type of compensation will encourage such efficiency.

The staff witness emphasized the hidden nature of option costs, the dominance of factors other than managerial efficiency in determining earning power and profits, and the possibilities of dilution as the primary reasons for denial of stock options to regulated utilities. He further testified that these public interest considerations warrant a denial of Black Hills' application even though in this case dilution is not a "particularly significant problem", because of the possibility that approval of one such plan was likely to encourage the filing of more ambitious plans with hidden and cumulative costs equally difficult to appraise.

For these reasons staff argues that such plans are not appropriate to compensate management and would impair the company's ability to perform the services of a public utility and are, therefore, not compatible with the public interest within the meaning of Section 204(a).

The examiner, reviewing the testimony of the applicant's witnesses with respect to the need for the stock option plan and the advantages which prompted the company to adopt the plan, found the plan to be reasonably necessary or appropriate for its intended purpose. He accepted the testimony of the applicant's witnesses that the company is paying salaries as high as its financial situation warrants, making further increases impracticable. He further noted the impossibility of making a meaningful comparison of benefits between stock options and salary increases, since many benefits, other than the additional dollars received, must be considered in connection with the stock options. He concluded that even if it were possible reasonably to calculate the profit possibilities to the optionees and compare them with salary increases, it would be futile if the optionees in fact preferred the options; and in his judgment the evidence revealed that dollar for dollar the stock option plan is more attractive than a pay raise. Also, in terms of benefits to the company, he found that as a device for retaining key people the stock option plan has advantages not matched by a salary increase program of like dimensions.

On the question of dilution, the examiner found that there would be no adverse effect on the average net asset value of the company's stock, which at the end of 1962 was about $25 per share, by the granting of options to purchase new stock at $37.25. However, the possibility of some dilution of the earning power of the company's stock led the examiner to modify the option price to $43.60 as a condition of his approval of the plan. This is the price which he computed would, as new investment, return the same earnings as were realized on the company's rate base for the year 1962, the last year for which figures were available at the hearing. Finding that the company earned 6.33 percent on its rate base in 1962, and that its earnings per share for 1962 were $2.76, he concluded that the option price should be the amount of new investment which at 6.33 percent would produce earnings of $2.76, *i.e.*, $43.60. It was his judgment that at this price the company's stock would continue to hold its value, other things being equal, and the sale of the optioned shares at a discount would not detract from the company's ability to render service. With respect to the 2,600 shares not yet included in option grants, the examiner said that authority to issue and sell such shares should be withheld until such time as the company desires to grant the options, when the proper option price can be determined on the basis indicated above.

Staff's exceptions charge that the examiner misconstrued the issues and that he did not consider the important questions raised by it. Staff is especially concerned with his failure to consider the question of the inability to determine the cost of and the proper accounting for option costs in a regulated industry. Staff also cites his failure to consider the question of the relationship or, rather, lack of relationship between executive service and the stock prices which measure the reward under the option plan.

In our view the record in this case raises serious questions of the compatibility of stock option plans of public utilities with the responsibilities of a regulated enterprise under the Federal Power Act. We are not of the opinion that executive stock options are prohibited by Section 305(a) of the Act which makes it unlawful for officers and directors to benefit from the sale of securities. A public utility is free to apply for approval of such a stock issue if it believes that its proposal can be justified under Section 204(a). Our objections go rather to the merits of the requirements of the Act that security issues must be compatible with the public interest. As we view the evidence the applicant has not made out a case for approval under Section 204(a). As the Commission recently held, "The plain purpose of Section 204 is to prevent the issuance of securities which might impair the company's financial integrity or its ability to perform its public utility responsibilities."[5] It is by this standard that the present application is to be judged and it is by this standard that applicant's plan fails.

Electric utilities are public service companies serving under franchises and certificates granted by agencies of government and possessing the power of eminent domain and other special privileges not available to ordinary companies. While there is an increasing amount of competition between the various forms of energy, electric service maintains a monopoly position for many uses and, even where subject to competition from other energy sources, the rivalry is not of the kind that normally assures reasonable prices for goods and services in a free enterprise situation. For this reason electric utilities are subject to regulation; otherwise they could take advantage of their monopoly position to charge excessive rates and make exorbitant profits. The function of regulatory agencies is to exercise a positive influence on the welfare and growth of this industry which is fundamental to the progress of our entire economy by controlling rates and profits and by focusing the attention of management on their public service responsibilities. The incentives under stock option plans, however, tend naturally to divert management from their responsibilities to the public and to focus their attention on maximizing prices and earnings in order to push stock quotations ever higher.

In non-regulated industry the ostensible reason for stock option plans is simple.[6] It is to maximize profits. Whether they fulfill this purpose is another question, but the purpose is unchallenged. The maximization of profits over the long term is an important management responsibility. Indeed, in those areas where price is controlled by the free interplay of competitive forces, perhaps the outstanding measure of management's competence is to be found in its ability to produce the highest earnings and greatest return on the shareholder's investment. In regulated industry this purpose cannot be accepted. The goal here must rather be effectiveness in the performance of a public service and the measure of executive endeavor is and must remain not the judgment of the stock market on present and future profits but success in providing a service upon which our entire economy is dependent, not at the highest prices which can be obtained but at the lowest rates consistent with the health of the industry and its ability to care for the future needs of its customers. An overriding personal stake in the stock market is doubtfully compatible with the public service responsibilities of the management of a public utility. The electric power industry of today recognizes that it must perform its work with a broad regard for the interests of consumers and the general public, as well as the interests of stockholders and management. Stock option plans do not lend themselves to this balanced management attitude.

---

[5] *Pacific Power & Light Company*, Opinion No. 354, 27 FPC 623, 626.

[6] A rich literature is accumulating on this intriguing subject. See J. A. Livingston, *The American Stockholder* (J. P. Lippincott Company, 1958); "The Mysterious Stock Option," Erwin N. Griswold, Dean, Harvard Law School, in *Tax Revision Compendium*, Nov. 16, 1959, Vol. 2, pp. 1327–1335, House Committee on Ways and Means; "Executive Compensation: Taxation of Stock Options," Vanderbilt Law Review 475 (1960) Leslie Gould, "Directors Responsibility—Two Schools of Thought on One Board," *New York Journal-American*, April 6, 1960; Dean Erwin N. Griswold, "Are Stock Options Getting Out of Hand?", Harvard Business Review, November–December, 1960.

The record made in this proceeding affords no basis for concluding that there is any positive relationship between the companies in the vanguard of the electric power industry on the technology and policy levels and those which have adopted stock option plans. There is also no basis for concluding that such plans either lead to or have evolved from distinguished performance in the public interest. Presumably the lack of or any such relationship is at least one of the reasons that although 57 percent of the companies listed on the New York and American stock exchanges have adopted stock option schemes, only 11 percent of the Class A and B electric companies have employed this device.[7] This evidence of the consensus of judgment within the industry that stock options are not necessary or appropriate for public utilities is to be respected and weighed against the views of the management of the applicant in this case.

The record in this case reveals a number of specific objections to a stock option plan for a public service company. First, such plans disguise the extent of managerial compensation and thus make it easy for the top managers to receive excessive compensation. As the staff showed in this case, there is no practical method of accounting for stock options which will give a clear indication of their cost to the company. Over the years the accounting for costs has been made the foundation of knowledgeable regulatory control. Since there is no disclosure of service costs under these plans in the accounts of the utility, the use of the stock option form of executive compensation distorts the real cost of electric utility service. On the other hand, increases in cash salary payments are immediately evident. Entered into the books of account, they are disclosed and understood by investors, consumers and regulatory officials alike.

Second, stock options usually prefer the top executives and ignore the important role of the lower and middle management group. On a company-wide basis they may create a morale problem for the many which offsets their claimed incentive value to the few.

Third, such plans lead to executive compensation which is often irrational, erratic, and unrelated to the performance of the executive. General market trends and the growth of the economy in the company's market area may play a larger role in determining the value of the options than the efforts of the option-holders themselves.

---

[7] Exhibit No. 12, Schedules 1 and 2.

Fourth, as discussed above, such options tend to make management focus more on common stock prices than on the service obligations of the company.

Finally, the impact of such options is to dilute the equity of the company. It is argued that applicant proposes only a small issue in relation to total capitalization. While initial plans, such as that of Black Hills, may be sufficiently modest to avoid serious dilution, stock options tend to be habit-forming and the first plans are usualy followed by more and bigger ones which cannot be rejected by management or the regulatory agency if future company officials are to be treated like their predecessors. Adoption of this course of supplementary executive compensation is almost irreversible and thus the initial decision is the crucial one, irrespective of the size or impact of the initial plan.

Black Hills' argument that the stock option plan is needed in order to retain top management staff can hardly be accepted since the record shows that without stock options the company has lost no employees with a salary in excess of $7,000 per year except by death or retirement.[8] Of the three options which have been granted for 1,000 shares or more, one of the recipients is 72 years old and one is 66. Of the remaining 13 recipients, five are between the ages of 55 and 65. It could hardly be contended that the options are needed to retain the services of these veterans. Options on only 1,850 shares of stock have been received by employees under the age of 50.[9]

What is clear from this evidence is that since most of the present options are to be granted to older employees additional stock options will soon have to be proposed, and authorizations requested, to attract and retain the services of younger men. Thus, the fact that the initial dilution would be relatively small in this case is not determinative, particularly where the cumulative effect may be substantial. Having once permitted the plan to go into operation, it would be doubly difficult, if not impossible, to find that any future increment was in itself not compatible with the public interest.[10]

The growth and results of the only stock option previously approved by this Commission are instructive. The Montana Power Company's plan which had a limit of 100,000 shares when approved by the Commission in 1956[11] had increased to 750,000 shares by January 1, 1962, equal to ten percent of Montana's common stock. The record shows that if all these options are exercised Montana Power will forego over $9 million in additional capital which the company would have received from the sale of the same stock at the market price rather than the option price.[12]

To illustrate the possible impact of the dilution problem further, the evidence in this proceeding also shows that on the average electric utilities stocks have increased in market value by 150 percent in the last ten years. If the same trend is assumed for the future, an option granted today will be exercised ten years from now at 40 percent of the then market price.

A further problem is presented by the timing factor of the option form of compensation. The general rule for regulated companies is that each generation of consumers should pay its own way as the costs are incurred and that the consumer of today should not be asked to pay for the services provided in earlier years nor should later generations of consumers pay for services performed currently. Stock options are a form of deferred compensation which impose a share of the burdens of compensating present management upon the stockholders and consumers at a later date when the options are exercised. We find nothing in the presentation of Black Hills which indicates that theirs is an exceptional case or in any way immune from the foregoing objections.

---

[8] Exhibit No. 12, Schedule 10. The reply brief of Black Hills indicates that the witness Walrafen resigned from his position as of September 1, 1963. The fact that the applicant has been forced to go outside the record to find one lone employee who, for one reason or another, has left the company only serves to point up the weakness of the company's case.

[9] Exhibit No. 3.

[10] Although the present plan is limited to 10,000 shares, applicant conceded in the hearing that there is nothing in the plan to prohibit their coming in with a supplemental application at any time.

[11] *The Montana Power Company*, 16 FPC 863 (1956).

[12] Exhibit No. 12, Schedule 7, Sheet 5.

We of course are aware that stock option plans have been accorded favorable treatment under the Internal Revenue Code and have been approved by two other Federal regulatory agencies[13] and by the regulatory commissions of sixteen states. We note that at least three state regulatory agencies have refused to approve stock option plans for public utilities.[14] Our concern in this case is limited to a determination whether such plans meet the standard set by Section 204(a) of the Federal Power Act. We find that applicant's actual experience in recruiting and retaining management without stock options, the comparison on the record of its salary scale with that of comparable companies, and the evidence as to the expected future life with the company of those who have received the bulk of the options, all fail to establish applicant's case for a restricted stock option plan. We further find that the fact that stock options involve a "no-cost" method of accounting; that actual costs are hidden from the shareholders and consumers; that the reward may have little, if any, relationship to the value of executive performance; that a conflict of interest may be created in the duty of those optionees who establish the rate policy of the company; and that the normal growth of such options tends to dilute the equity of the company, establish that the use of the stock option as a device for executive compensation is not consistent with the proper performance by a utility of its public service obligation.

On the record in this case we conclude that the Restricted Stock Option Plan of applicant Black Hills is not compatible with the public interest. Accordingly, the application for authority for the issuance of stock will be denied.

The Commission finds:

(1) Black Hills Power and Light Company, a corporation organized under the laws of the State of South Dakota and the applicant herein, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued November 2, 1962, in this docket, 28 FPC 785.

(2) The proposed issuance and sale of up to a maximum of 10,000 shares of common stock, par value $1.00 per share, pursuant to the provisions of the above-described Restricted Stock Option Plan will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance

of common stock, as described above, is, therefore, not exempt by virtue of that subsection from the requirements of Section 204 of the Act.

(4) The proposed issuance of 10,000 shares of common stock pursuant to applicants Restricted Stock Option Plan (a) is not compatible with the public interest, is not necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility, and will impair its ability to perform such service, and (b) is not reasonably necessary or appropriate for the accomplishment of the corporate purposes of the applicant.

The Commission orders:

The application by Black Hills Power and Light Company for authorization to issue 10,000 shares of common stock pursuant to the Restricted Stock Option Plan is denied.

Commissioner O'CONNOR *dissenting.*

Commissioner WOODWARD *dissenting* joins in Commissioner O'CONNOR's statement.

O'CONNOR, Commissioner, *dissenting:*

In the first of this two-stage proceeding I carefully explained what the legislative history and judicial interpretation dictate as the proper criteria for Section 204(a).[1] I strongly urged that the very plan, here again rejected, met those criteria and that the Commission had exceeded its statutory authority in holding to the contrary. I have not altered my views. However, lest the absence of their repetition be misconstrued, I hereby reindorse them.

The thrust of my comments will be toward the highly speculative nature of the majority's statement, and at a significant, and unfortunate, consequence to which it may well lead.

The majority holds that stock options are incompatible with the responsibilities of electric utilities. As a result, they are hereinafter proscribed for those utilities.

The majority fears that options will result in higher power prices. Higher prices, they reason, by producing higher earnings, will ultimately produce higher market demand for common equity. Thus managers can, and would, effect market escalations. Notwithstanding this conclusion's variance with their statement that general market trends and area growth—and not individual efforts—produce market fluctuations, it is emphatically repudiated by the record upon which this opinion ostensibly rests. Testimony reveals that subsequent to the option's adoption by 77% of the Black Hill's shareholders, *i.e.*, at a time when the majority anticipates higher rates, company managers voluntarily reduced rates in one service area, and, at the time of the hearing, had announced a further reduction in its general service rate.[2] The evidence simply will not support any inference that Commission authorization of the Black Hills option woud inevitably have, or tend to have, effects detrimental to the public interest.

Moreover, one legitimately wonders how optionees of well-regulated utilities could violate their public trust to the extent sufficient to create market repercussions. Fallacious surplus accounts, alluring to the unsophisticated investor, are proscribed by our Uniform System of Accounts. Excessive rates of return, productive of larger dividends, are proscribed by the general provisions of Section 205(a). Inflated rate bases, by which reasonable rates of return could produce excessive dollars of return, and reasonable rate bases containing fees paid to controlling interests, are proscribed by Section 3(13). Any violation of the Uniform System of Accounts would be noticed upon the filing of the company's first annual report, and any violation of Section 205(a) would be exposed the first time a company initiated a Section 205(e) proceeding, or the Commission initiated a periodic actual rate of return spot-check. Violations of Section 3(13) would be revealed in either Section 205(e) or 206(a) proceedings. Slight violations of Section 3(13) could escape unnoticed, but slight violations would have absolutely no effect on the market.

---

[1] *Black Hills Power and Light Co.*, 28 FPC 1121, 1134–40 (1962).

[2] Record, Volume 1, p. 129.

The majority also fears that stock option plans disguise their costs, the implication being that disguised costs lead to excessive costs. The majority defines "costs" several ways, one of which is as "capital foregone." "Capital foregone" represents the difference between the option price and the market price on the date of exercise, and is synonomous with "dilution." Referring to this dilution as a cost is more fanciful than accurate because the dilution resulting from the regulated issuance of stock options would cost consumers nothing and shareholders very little.

True costs, in the sense that more capital need be raised to generate the same income, are envisioned by the majority's indication that the exercise of an option will burden future consumers. Deciphered, this is an endorsement of staff's Montana Power Company exhibit whereby they calculated the annual earnings requirement of the "excess shares" issued under the option.[3] Staff's exhibit reasoned that an n shares earned x dollars per share, the issuance of $n+$ shares, where the $+$ constituted excess shares, would continue to earn x dollars per share. The conclusion is fallacious. As staff witness Beidatsch recognized, the initial impact of minor dilution is on shareholders, not consumers.[4] Unlike the issuance of paid-for shares which create an investment and thus a return, a reasonable amount of excess shares would result in a corresponding, but minute, *decrease* in earnings per share. Before earnings could remain constant, *i.e.*, the dollar-impact be shifted to consumers, rates must be increased. Thus, the unfortunate consequence of staff's exhibit is that return on equity becomes directly translated into return on investment for ratemaking purposes. This is a position to which the Commission has not committed itself but one which, if they believe that option-exercise will inevitably burden consumers, is indicated by the majority's statement. Aside from its undesirable consequences, the Montana Power Company exhibit was premised upon assumptions too speculative for even witness Beidatsch to accept.[5] One of its assumptions, *viz.*, that this agency would have authorized the additional 450,000 shares to be optioned, is by itself sufficient to dismiss its dollar-conclusions as meaningless.[6]

Thus, before stock options could create costs borne by consumers, two conditions must exist: First, the equity dilution must be so extensive that the market price of the company's equity is substantially depressed; and second, the applicable regulatory agency must determine that an increased rate of return is needed as compensation. Apparently conceding the desirability of the second condition, the majority indicates its helplessness to prevent the first. The rationale is that stock options are uncontrollable; once an initial application is approved, subsequent applications become impossible to reject. The majority envisions no consideration of degrees; no leeway to accept what is reasonable and to reject what is not. It thus becomes better to proscribe all options—even the unquestionably reasonable Black Hills option—than to attempt to identify and reject only the unreasonable or inappropriate applications.

---

[3] "Excess shares" are defined as being" . . . the number of shares . . . exercised by optionees in excess of the number required to raise on the market on the . . . dates of . . . exercise the equivalent amount of capital contributed by the optionees." Staff Schedule 7, Sheet 1.

[4] Record, Volume 2, p. 330.

[5] Record, Volume 2, at 41–42.

[6] Unmentioned in the majority's statement is that Montana Power Company common stock underwent a 3 for 1 split in 1959.

Their position is totally meritless. There is no legal or practical restriction upon the denial of stock option applications. Whether a particular application be initial or secondary, it may be denied. Clearly, whenever its approval would result in the extent of dilution necessary to impair substantially the cost of capital, it *must* be denied.

The majority seeks to shore-up their position with the suggestion that, due to the age of the Black Hills' optionees, other Black Hills' applications are soon forthcoming. Again they ignore the evidence. Six of the fifteen optionees are under forty-four years of age, which, assuming retirement at age sixty-five, gives them an estimated future employment of from twenty-one to twenty-nine years. These are not veterans soon to retire. Moreover, the present plan is without restriction as to the age, department or length of service requirement for its optionees. The present optionees include Line Superintendents, the General Sales Manager, the Sales Production Manager, the Production Superintendent, the Distribution Engineer, and the Chief Revenue Accountant. Consequently, any intimation that the scope of the present plan is insufficiently narrow is inaccurate. Further still, there are 3,200 unoptioned shares under the present plan. Inasmuch as the average share per optionee below the level of Senior Vice President is 275, this indicates that 12 more options could be granted before another application need be filed. The majority's clairvoyance in the face of this evidence regrettably escapes me.

Commission approval of proposals which involve potential, *de minimis* dilution is neither unusual nor improper when, as here, there are counterbalancing considerations. Examples can be found in financing plans whereby bonds are issued with warrants to convert to common shares. Thus in January of 1960, this Commission approved a financing plan for Midwestern Gas Transmission Company (Midwestern) whereby $1,000 first mortgage bonds were issued with warrants to purchase 4 shares of Midwestern's common stock at $15.00. The warrants could be exercised between 1964 and 1973, and were admittedly "sweetners" added solely to attract potential investors away from more secure investments.[7] Midwestern common is now selling around $19.00 per share.

Other straws to which the majority clings can be disposed of briefly. First, their apprehension that stock options ignore lower and middle management groups is curious in the context of Black Hills which doesn't have such groups. Moreover, it ignores the Employee Welfare and Savings Plan which, although less attractive than the Restricted Stock Option Plan, is open to all employees.[8] More curious, a unanimous Commission approved the Employee Welfare plan even though the shares were to be issued at 90% of their market value on the granting date. Thus, as of the date of issuance, 10% of the market value of the shares is likely to be foregone. Moreover, the majority's concern for the morale of this non-existant group is touching, unconvincing and hardly dispositive, and smacks of their position of rubber-stamping subsequent applications. If a serious morale problem could be shown in any application, either initial or secondary, likely to impair the ability of the company to perform its public utility operations, obviously the application should be denied.

---

[7] Record, Volume 10, p. 1473, *Midwestern Gas Transmission Co.*, Docket No. RP61-19.

[8] Approved 28 FPC 785 (1962).

Their contention of 'compensation unrelated to performance' is unacceptable for two reasons. First, stock values, they say, appreciate because of general market trends and area growth. True. Area growth, however, often appreciates because of readily available sources of cheap power, which, in turn, is often the result of efficient management. The majority has yet to contend that better management won't produce cheaper power. To do so would be astonishing, not only because of its patent invalidity, but also because it would hard-press this Commission to justify its current project to measure the performance of public utility managers. Second, however, and with more ominous implications, cash salaries are no more related to performance than are stock option tax benefits. Thus, although the instant decision purportedly deals only with a method of compensation and not the amount, the 'unrelated compensation' test will inevitably be read as a mandate to prescribe salary levels, and, in fact, the number of personnel a utility may employ. Such far-reaching regulation is ideologically impalatable to most individuals, but it is the inevitable conclusion—in fact, the next short step—from the majority's statement.

Equally weighty is their argument that if industry vanguards have no option plans, no industry component, regardless of how small, can justify one. The rebuttal is obvious: stock options are enticements to attract and keep qualified personnel, and industry vanguards do not need these enticements. Their standing offer of security, prestige, large salaries, and opportunities to work other capable personnel are, in themselves, sufficient attractions. Any speculative elaboration on Black Hills' need is unnecessary, inasmuch as the record itself establishes it. At the time of the Examiner's hearing Mr. L. Duane Walrafen was Vice-President and Secretary-Treasurer of Black Hills. He was also the Chief Accounting Officer, and was described as having "primary responsibility for accounting, rates, financing, budgeting, forecasting, corporate records, stockholder relations, taxes and Commission regulation."[9] He was then thirty-nine years of age, and, although his salary had more than doubled in his seven years at Black Hills, he admitted that he would be compelled to consider other offers. Our public files, of which I take official notice, now reveal that Mr. L. Duane Walrafen is a Vice-President of The Kansas Power & Light Company. Kansas Power & Light has a stock option in effect for its key employees.[10]

The majority's conclusion that all stock options are not prohibited by Section 305(a) of the Federal Power Act does little to conceal their conclusion that all such options *are* prohibited by Section 204. When the generalities relied upon to reject this application are weighed against the applicant's impressive presentation, it becomes clear that no stock option will ever be approved for an electric utility under the jurisdiction of this Commission. No applicant will ever be able to rebut the hazy rationale of this decision. This is a regrettable outcome; one that is compelled by neither law nor reason. It is reached because of a vague apprehension, confirmed by neither the record nor the fabricated supports, that all optionees will inevitably cease functioning in the public interest. It is made with inadequate consideration of the fact that potential optionees can always acquire a personal interest in their company on the open market, and that the compulsory first-offer requirement precludes any "get-rich-quick" scheme.[11] It is directed at the conflict-of-interest of stock owning utility managers, and never pinpoints the evils inherent in stock options. It minimizes the fact that smaller utilities need extra blandishments to attract and retain qualified personnel; that the cost of salaries are unquestionably borne by consumers whereas reasonable stock options seldom are; and that, at any rate, there is evidence that salary increases are seldom as attractive as stock options. In short, it has accentuated the problem faced by public utilities in employing and retaining qualified personnel. It admits the absence of equity dilution in this case, but relies upon an unfounded infirmity to prevent it in subsequent applications. Lastly, by giving Section 204 the most stringent of interpretations, it unquestionably has obstructed the passage of pending legislation S. 1700 and H.R. 6790. These bills would amend Section 12 of the Natural Gas Act to give us the identical security-issuance jurisdiction we now possess under Section 204 of the Federal Power Act. If this legislation is passed, and the instant decision stands, the fate of the pipeline company stock option becomes fixed.

---

[9] Record, Volume 2, p. 216.

[10] The Montana Power Company, which operates in the neighboring states of Montana, Wyoming and Idaho, and The Washington Water Power Company, which operates in Washington and Idaho also have stock option plans in effect.

To a decision by which every one loses, I must respectfully dissent. It is my firm belief that the Black Hills plan should be approved. I would, however, condition it to require the issuance of shares at 100% of their market value on the granting date, in lieu of the 95% price now proposed. This condition would preclude dilution as of this date, and would comply with the Revenue Act of 1964 whereby Congress reiterated its impetus to the adoption of these plans.

Commissioner Woodward joins me in this dissent.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR ISSUANCE OF SHARES

(Issued November 26, 1963)

Fribourg, *Presiding Examiner:*

I. History of the Case up to the Time of Hearing

On July 23, 1962, Black Hills Power and Light Company applied for authorization under Section 204 of the Federal Power Act to sell 20,000 shares of its common stock to its executives and employees (and to those of a subsidiary, Wyodak Resources Development Corp.) under two plans. Authority was granted to sell 10,000 shares under the Employees Savings and Welfare Plan by order of the Commission dated November 2, 1962. We are concerned here with the remaining 10,000 shares, which the company proposes to sell to executives and other key employees under a Restricted Stock Option Plan. Options were granted on June 28, 1962, under the plan at $37.25 per share with respect to 7,400 shares, subject to Commission approval. The remaining 2,600 shares were reserved for possible future option grants.

---

[11] ". . . Shares purchased upon exercise of an option may not be sold or transferred within six months of the date of issue of the certificate therefor, unless they are first offered to the Corporation at the option price of such shares, and the certificate or certificates for such shares shall be endorsed to reflect such restriction." Article V of the Stock Option Plan. This restriction is also contained in Condition 1 of each individual option.

To describe the plan, the examiner can do no better than to take the following paragraphs from the Commission's order of December 27, 1962:

> Under the Restricted Stock Option Plan, up to but not exceeding 10,000 shares will be issued and sold, from time to time prior to February 1, 1982, to executives and other key employees. The period during which options may be granted will terminate on February 1, 1972; the maximum term of any option is ten years. The price for the optioned shares will be not less than 95% of the market price on the date of each grant. Payment in full, in cash, will be made for all shares purchased. Options granted under this plan are exercisable only by the grantees during their respective lifetimes (or in the event of death by their heirs within one year); are not exercisable for one year from the date of grant and are exercisable to the extent of 25% of the optional shares for each year elapsed thereafter, provided the grantee remains in the employ of the Applicant or a subsidiary.
>
> The Stock Option Plan further provides that it shall be administered by a Committee from members of the Board of Directors which shall have authority in its discretion to determine when and to which employees of the Applicant or any subsidiary corporation, options shall be granted. Neither the members of the Committee nor any member of the Board of Directors who is not an officer or employee of the Applicant (or subsidiary corporation) shall be eligible to receive an option under the plan.[2]
>
> Applicant states that the issuance and sale of the additional Common Stock will not be underwritten, and no underwriters' or finders' fees will be paid to any person in connection with such issuance and sale.
>
> * * * * *
>
> The Restricted Stock Option Plan presents a different problem from that of the Employees Savings and Welfare Plan heretofore authorized. To illustrate the matter simply,[3] under a restricted stock option plan a corporation grants its executives and key employees options or rights to buy shares of the Company's stock in the future at 95% of the stock's market value at the time the option is granted. After a minimum one-year period, the employee may exercise his option to purchase stock from the corporation at any time during the nine years following the option date. In this way he may acquire shares of greatly increased value from the corporation, at a price equal to only 95% of their market value on the earlier option date. After holding the shares six months, he may sell and the entire gain (market value on date of sale, minus 95% of market value on option date) is taxed at capital gain instead of at ordinary tax rates.
>
> The proposed stock options thus give the holders thereof the right to purchase authorized but unissued shares of common stock of Applicant at a price which is related not to the market price of the stock at the date the options are exercised, but instead to the market price on the date of the grant of the option. As a consequence, Applicant is placed in the position, at the time it grants the options, of being obligated, on call of the option holders, to sell the requisite number of shares of its common stock at any time over the next eight years, at a potentially large discount from the market price of the stock on the date of sale. The amount of dis-

[2] The Restricted Stock Option Plan is designed to meet the requirements of Section 421 of the Internal Revenue Code of 1964.

[3] See 26 USCA 421, and Treasury Regs. thereunder.

> count, of course, is unknown at the date the options are granted, but it must be assumed that the discount could be very large, since the opportunity for capital gains is the great attraction of such plans.

On December 27, 1962, the Commission issued the order from which the foregoing quotation is taken, denying approval of the plan. The order was accompanied by three opinions. The majority said that

> * * * there has been no showing that the Applicant will receive benefits that its present executives would not provide without such options; that Applicant must grant options to retain its executives; or that it could not grant equivalent benefits through salary increases (which would be tax deductible to the Applicant) at less cost.

Since the Applicant had failed to show that the issuance of the option stock was justified by one of the above reasons, or by some other reason providing a basis for finding that the plan is in accordance with Section 204 of the Federal Power Act (*i. e.*, that it is for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest) the application was denied. Commissioner Morgan concurred in the result on the ground that Section 305(a) prohibits Commission approval of stock options.

The minority dissented on the ground that the showing required by Section 204 had been made and that requested authority should therefore be granted.

On January 24, 1963, the company applied for rehearing of the December 27, 1962 order. Rehearing was granted February 21, 1963, in an order in which the Commission noted that the applicant was prepared to show, if permitted to do so, that the plan met the criteria of Section 204. A hearing was ordered so that both the applicant and the Commission's staff might have an opportunity to introduce comprehensive evidence on the basis of which a determination of the propriety of the proposed stock issue could be made.

Hearings took place from June 3 to 6, inclusive, and the last brief was received September 16, 1963.

II. Section 204

In order to approve or disapprove the proposed plan it is necessary to consider the statutory standards by which it must be judged. We consider first Section 204 of the Federal Power Act, 15 U.S.C. 824c. That section prohibits public utilities under FPC jurisdiction from issuing securities unless the Commission by order authorizes them to do so.

> * * * The Commission shall make such order only if it finds that such issue * * * (a) is for some lawful object, within the corporate purposes of the applicant and compatible with the public interest, which is necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility and which will not impair its ability to perform that service, and (b) is reasonably necessary or appropriate for such purposes. * * *

There is no dispute as to the plan being for a lawful object within the corporate purposes of the applicant. The optionees are engaged to carry on the business authorized by the charter of the applicant (or, in one case, of a wholly-owned subsidiary). Hiring for such purposes is within a corporation's implied powers, and the power to make an agreement as to compensation, including a stock option plan, is incidental to the power to employ, *Gruber v. Chesapeake & Ohio Ry Co.*, 158 F. Supp. 593, 610 and cases there cited.

The Commission set this case for hearing in order to determine whether the applicant (1) would receive benefits that its present executives would not provide without stock options, (2) must grant options to retain its executives and (3) could grant equivalent benefits at less cost through salary increases.

These are all questions which call primarily for business judgments as to company-personnel relations rather than judgments as to the company's ability to perform public utility service. Of course, the latter is involved in any business judgment—any badly-judged expenditure will tend to affect a public utility's ability to serve the public—but the Commission would surely disclaim the right to pass upon every exercise of business judgment on the part of the managements of the companies it regulates. For instance, if Black Hills attempted to obtain for itself through salary increases (or cash bonuses or by furnishing housing or transportation to its officials), the benefits it is here seeking through stock options, the Commission would certainly not consider whether stock options might be a better way of proceeding. The question would never be referred to it. The company would raise salaries or pay bonuses or grant fringe benefits, and that would be that.

However, since the Commission, in setting the case for hearing, has explicitly placed the comparative questions before the presiding examiner for decision, he will attempt to decide them.

As to the first two questions, namely, the receipt by the applicant of benefits that its present executives would not provide without stock options, and the necessity for granting options to retain its executives, it is of course impossible to say that any particular executive would perform his duties any better, or any differently, if he had stock options instead of actual or prospective salary increases, or that he would stay with the company only on condition of receiving options. An officer or employee is expected to do his job as best he can whether his compensation takes one form or another, and there is some salary level at which any of the company's officers would stay with it, options or no options.

The president of the company, Mr. Neil G. Simpson, testified, however, that in his opinion the company has improved its once relatively low salary structure to as high a point as the company's financial and economic situation presently warrants, but that it is having difficulty in attracting and retaining executives of the types it needs. Such personnel are "as much interested in the fringe benefits that the company offers as in the wages paid." Stock options make it easier for them to build an estate and provide for the future. Mr. Simpson expressed the fear that the company, without stock options, would not only be unable to attract new executive management but would lose some of its present key personnel. Therefore, while it cannot be said that the present executives would behave any differently as the result of being given stock options, it is questionable that they would all remain with the company or that new ones woud be attracted to it. In that sense, the record gives reason to believe that the applicant "would receive benefits that its present executives would not provide without stock options." Those remaining in the jobs without stock options would presumably provide the same benefits, but without the options the same people might not be there to provide them.

Whether equivalent benefits could be granted at less cost through salary increases is, in the first place, a question which assumes that salary increases are practicable. The testimony of Mr. Simpson is to the contrary. As we have already seen, it was his opinion that the company is paying a salary scale substantially as high as its economic and financial situation warrants. Mr. L. Duane Walrafen, chief accounting officer of the company, expressed the same opinion in his direct testimony. Partial confirmation of this is found in the testimony of the staff witness, who sponsored an exhibit tending to show that the company's salary scale for principal executives is "favorably in line" with that of comparable companies.[1]

It is not possible to equate the comparative benefits in a meaningful way. As Mr. Simpson's testimony shows, those to whom the options were offered regard them as a way of building up their estates and appear to place a high value on the potential benefits. Mr. Walrafen testified that the employees who have owned stock in the company have a pronounced interest in the options and hold the stock in high regard, so that in his opinion "the stock option plan has a psychological inducement out of proportion to the actual monetary advantage that might be possible." Being selected as a "key employee" through the award of a stock option appears to carry with it a distinction and prestige which a mere salary increase cannot match. Mr. Walrafen further testified that since the adoption of the plan there is less talk among the optionees about possible employment elsewhere.

Thus, even if it were possible to calculate with any reasonable certainty the profit possibilities to the optionees and compare them with hypothetical salary increases not now considered practicable, it does not follow that the attraction of one dollar of the latter would equal that of one dollar of the former. Not all human decisions are made mathematically. The prospect of protection without the sacrifices involved in saving, the lure of a long profit, and the prestige attached to the receipt of a stock option make it more attractive, dollar for dollar, than a pay raise. If the employees prefer the one, it is futile to point out that the other may provide them with equivalent benefits at less cost to the company.

Not only may the providing of "equivalent benefits" to the employees by means of salary increases be less attractive to them, but it may be less effective in attaining the objective sought by the company. The option plan makes it necessary that the optionees stay with the company to gain the full benefits offered them. The options are not exercisable until one year from the date of grant, and then only to the extent of 25 percent of the option each year, and only if the optionee remains with the applicant. The holder of an option who sees the stock go up in the two years after the grant would be entitled at that point to buy 50 percent of the total amount of stock optioned to him. If at that point he changes employment he would forego all the profit on the remaining 50 percent. It is reasonable to conclude that as a device for retaining key personnel the stock option plan has advantages not matched by a salary increase program of like dimensions.

The comparison made by the staff between the costs of the two plans is limited to a comparison of costs to the company. That is, it is grounded upon the assumption (Staff br. p. 25) that at the present 52 percent tax rate the corporation can make a deductible salary payment of $208 at the same cost to itself that would result from a $100 stock option benefit. Assuming this to be true, it omits consideration of the consumer. The staff's method carries with it the assumption that the company's net income would be reduced by $100 if salaries were raised by $208. If, however, the company sought rate increases to make up the drop in net, rates would have to go up by $208 to cover the increase in expenses in order to realize the same net as before. There is no indication that the company is not entitled to earn what it is now earning. Hence salary increases imply rate increases.

---

[1] Cross-examination by able company counsel was directed towards showing that the companies selected for comparison in the exhibit referred to were not truly comparable with Black Hills. However, it does not appear to the examiner that the cross-examination showed such differences between Black Hills on the one hand and the selected companies on the other as to destroy the value of the exhibit (as it was finally modified by the staff) for the purpose for which it was offered.

The staff's calculation is valid as far as it goes, assuming that the increase in salaries would be absorbed by the company and not passed on in the form of higher rates, but when we are faced with a statute which requires the Commission to consider "the proper performance by the applicant as a public utility" it is somewhat remarkable that the staff has ignored the potential impact of salary increases on the consumer. It has in fact looked upon such increases as though there were no such impact.

Yet in considering the dilution effect of a stock option plan the staff argues (Br. p. 45) that although the impact is borne initially by the stockholders it "may be transferred in whole or in part to the consumers of the company." Surely the same is true as to the impact of salary increases. And as far as the consumer is concerned the staff's comparison of $208 of salary benefits with $100 of stock option benefits is inapplicable. The impact on him is dollar for dollar.

The entire argument of the staff to the effect that stock options will result in dilution of book values and earnings is unconvincing.[2] The stock will not be given away. It will be sold. The dilution argument seems to be based on the fact that it will be sold for less than the market price. The dilution shown in Staff Exhibit 12 is based on the difference between the option price and the market price as of the time of the assumed sale.

It is questionable whether this is the proper way to measure dilution. Presumably the proceeds of the optioned stock will be invested in income-producing assets. If the price of each share of stock sold under the option plan exceeds the average net asset value of the shares outstanding at the time of sale, no dilution takes place. On the contrary, the average is increased. The most that can be said on the staff's side of the argument is that a sale at the market would increase the asset value still further.

The record shows that the market price of the stock at the time of the hearing was $48.25 per share. The examiner takes official notice of newspaper reports showing the present price to be about the same.[3] The capital and surplus applicable to the common stock on December 31, 1962, according to the annual report which is Exhibit 4, is around $25 per share. To say that dilution would occur because stock was optioned at $37.25 is to give the word a new meaning.

True, the asset picture would look still better if the market price were $75 so that the stock could be sold at $65 or $70. It is not fair to say, however, that options would dilute the asset value of a common stock if that asset value is less than the option price.

The examiner concludes that although he can make, and does make, the finding that the proposed plan is for a lawful object and within the corporate purposes of the applicant, the question whether it is "compatible with the public interest" cannot be answered by making a comparison with some other plan, such as a salary increase program, which has not been proposed and which the record shows to be of dubious practicability. Nor can a calculation of how much more the company would realize by selling its stock in the open market than by selling it under stock options yield a proper basis for deciding whether the statutory standard has been met. In the examiner's opinion the statutory language calls for a quite different type of decision, and one that should not be made on a comparative basis.

---

[2] The adverse opinion of the staff's witness was based on the view that stock option plans are bad as a matter of regulatory policy because of the dilution factor and because one such plan is likely to lead to another. Under cross-examination, however, he was unable to say that his opinion was applicable to this particular plan which is, of course, the only one under consideration. He admitted (Tr. 470): "If the Black Hills plan was a one-shot deal, and there was assurance of that, then of course all this on dilution would not be applicable at all." His opposition to this plan springs from the belief that stock option plans in general for public utility companies are adverse to the public interest.

[3] 46-3/4 bid, 49-3/4 asked, according to *The New York Times*, November 13, 1963.

As this Commission pointed out in *Pacific Power & Light Co.*, Opinion 354, issued April 17, 1962, 27 FPC 628, the provisions of Section 204 make it

> * * * a particularly unsuitable vehicle for comprehensive licensing-type regulation such as that exercised by this Commission under Section 7 of the Natural Gas Act.

The *Pacific Power & Light* case dealt with the issuance of securities to finance a power line, and the Commission remarked that if the company had chosen to finance the line out of surplus or from the proceeds of a short-term loan, it would have built it without even notifying the Commission. We have already seen a parallel to this in the present case. If the applicant had chosen to attract and retain its officers by salary increases, by cash bonuses or by any one or more of many possible fringe benefits, this Commission would have no veto power over such action.

The decision as to whether the company is making the best of two or more choices, or whether any action at all is required by the public convenience and necessity, is a decision that the Commission makes in a certificate case. Had Section 204 been intended to lead to that type of decision, it is not reasonable to suppose that it would have required Commission action if the company makes one choice but not if it makes another.

The *Pacific Power & Light* opinion further points out that jurisdiction attached only by virtue of the fact that no state commission was authorized to review the security issue there contemplated. The same is true in the present case: South Dakota exercises no authority over the issuance of securities by Black Hills Power and Light Company. The Commission in *Pacific Power & Light*, concluded that

> * * * If Congress had intended Section 204 to do service as a grant of certificating authority, it would hardly have confined the exercise of that authority to the relatively few companies which are not exempted from that section.

In addition to the foregoing, and to the discussion of legislative history in the *Pacific Power & Light* opinion (with which discussion the examiner is in full agreement) it is perhaps worth pointing out that Congress, in enacting Section 204, took a very limited view of the authority it was granting. In Sen. Rep. 621, 74th Cong., 1st Sess., at page 28, the Senate Committee discussed Section 204 of S. 2796 (substantially identical to Section 204 of the Act as it now stands) in the following terms:

> Under subsection (a) approval of security issues must be obtained in cases where no State commission has control. Approval must be given if the issue is for a lawful purpose, consistent with the proper performance by the applicant of service as a public utility.

The same language appears in the House report. H.R. Rep. 1318, 74th Cong., 1st Sess., page 28. It seems evident that if the record shows the plan to be lawful and within the corporate purposes, the remaining analysis should focus on whether approval would impair the company's ability to perform its normal functions as a public utility. Unless impairment is shown to be in prospect, approval must be granted.

The Commission also pointed out in its *Pacific Power & Light* opinion, *supra*,

> The plain purpose of Section 204 is to prevent the issuance of securities which might impair the company's financial integrity or its ability to perform its public utility responsibilities.

It there examined the investment which the company proposed to make with the proceeds of the securities issue there under consideration, but it expressly refused to decide whether some other type of investment might be preferable. It inquired only "whether the investment is so improvident, frivolous, or speculative, that it threatens to squander the corporate substance without reasonable hope of return." It declined to make an independent assessment of the wisdom of the management's decision. The examiner is bound by what it did. He has no hesitation, however, in stating that he would subscribe to that line of reasoning were the question before him one of first impression.

Applying it to the present case, the examiner concludes that the decision should be made without reference to the comparative merits of other possible courses of action, but solely on the basis of whether this plan and no other is likely to impair the company's ability to perform utility service, and is appropriate for its purpose.

The application seeks to issue stock for the purpose of providing a management incentive. Consideration of such an application must embrace consideration of price. Plainly, if the price were $5.00 per share the plan would tend to impair the company's ability to perform service as a public utility. No underwriter would be as eager to accept a stock issue of a company if company policy permitted stock offerings to management at twice the annual earnings. Options at such a price would weaken the company's ability to raise equity capital at reasonable rates. It cannot be argued that price is none of the Commission's business. The Commission has better things to do than to approve the issuance of 10,000 shares of stock merely on the basis of a finding that such an issue is necessary for the exercise of options granted in that amount. The statute cannot require so fatuous a procedure.

The question then arises: At what price must stock be sold in order to free the transaction from the likelihood that it will detract from the company's ability to render service? Unless a policy is set, each case must be judged without the benefit of a standard of measurement.

It is impossible, as a practical matter, to say that the prospective benefits justify a sale at one price and not at another. Absence of benefits would justify a disapproval, but the presence of benefits supplies no yardstick by which the propriety of an authorization can be measured. The arguments advanced by the company could be used with equal force to justify options at virtually any price. Those of the staff could be used to prohibit them altogether.

Section 204 is neither a bar nor a rubber stamp. There is some approximate level below which a sale of stock tends, by diluting the privileges of the stock already outstanding, to make it more difficult to raise capital in the future. If a stockholder sees his equity in earnings and assets being lessened by sales under stock options, the stock becomes a progressively less attractive vehicle for investment, other things being equal. On the other hand, if the option price is such that his equity is not decreased, purchases by the key executives would tend to build up, rather than dilute, the already outstanding shares.

According to the applicant's 1962 annual report, which forms a part of the record, the plant account, less depreciation, averaged for the year 1961–62, was $29,171,385. This plus an appropriate working capital allowance of $923,536[4] makes a total of $30,094,921. This amount of investment produced $1,905,594 of net operating income for the 1962 fiscal year, which was 6.33 percent of the total investment in plant and working capital required to produce it.

Where, as here, the record shows the company to be enjoying steady growth and good prospects, it is a reasonable assumption that the proceeds of stock options can be invested in new corporate assets at a satisfactory rate of return. At a 6.33 percent rate of return it would take $43.60 of new investment to produce $2.76 of earnings, *i.e.*, the same earnings per share on the new investment that were earned last year on the old.

If the management can create higher earnings, not only the key executives but all stockholders will benefit. At this price for the stock the options would provide management with a true incentive for the future. They would be paying a price at which the present rate of earnings would be maintained, and they, along with all other stockholders would benefit from any future improvement. The present stockholders would not be giving away any part of the earnings which the company, without the benefit of stock options, has been making in the past. And the production of the same per share earnings would not require the ratepayers to pay any more, in terms of return on the additional investment, than they now pay on the present one.

As previously pointed out, there would be no dilution of assets at an option price of $37.25. Obviously then there would be none at $43.60. The use of this yardstick would not be appropriate in all industries. For instance, in industries where assets are incapable of producing a reasonable return it may be undesirable and impractical to set a lower limit on a stock option price by relating it to assets per share. In this industry, where there is a predictable relationship between plant investment and earnings, it seems entirely appropriate to use this additional measure as a safeguard of investors' equity. In the present case, it makes no difference.

It may be argued that any stock option interferes with the sale in the open market of more of that kind of stock, and in that way makes it more difficult to obtain new capital at the best possible price. To an extent, this may be true. It is possible that a block of stock under the option of $43.60 may make it more difficult to sell stock in the open market at, say $50 or $60. However, it can hardly be said that options at $43.60 are not "consistent with the proper performance by the applicant of service as a public utility" or that they will "impair its ability to perform that service." It is properly performing that service now, and the new stock may be expected to show the same earnings as the old, plus whatever earnings the management, with this incentive before it, is able to produce additionally. It is not necessary to decide whether this is the best price obtainable, but only whether it is a price that is likely to result in impaired service.

---

[4] Derived as follows:

One-eighth of operating expenses of $4,034,825	$504,353
Materials and supplies (including merchandise and fuel)—average	680,487
Prepayments—average	110,696
	1,295,536
Less: 50 percent of $744,000 (Federal income taxes—current)	372,000
	923,536

The proposed price of $37.25, on the other hand, would give the company enough money to produce only $2.36 of earnings annually, assuming last year's 6.33 percent rate of return. For each share purchased at this price under the proposed plan the buyer would obtain an equity in $2.76 of earnings.[5] The difference would not represent an incentive but a reward, which would come proportionately from the present stockholders. The purpose of the proposed issue is to provide an incentive to management, and the statute requires a ruling as to whether the issue is "reasonably necessary or appropriate" for that purpose. It is not appropriate to an incentive plan, designed to stimulate the future activity of the management, to hand it a part of the earnings already being produced without any incentive plan at all.

The examiner concludes that a sale of stock under the proposed stock option plan at $37.25 does not meet the standards of Section 204, but that a sale at $43.60 would meet those standards.

The method used to reach this conclusion may or may not be found useful in the future. Experience is not yet sufficient to warrant the statement of any general rule. It is, however, a method which permits no dilution of the earnings or assets represented by the present shares, which requires no higher rate of return from ratepayers than they now pay, which does not depend on calculations of what the stock market may do in the future, which leaves management a wide degree of discretion (though admittedly not as wide as it would like), and which, in the examiner's judgment, conforms to the statutory language and intent. Whether it will be suitable in future cases is a decision that need not yet be made. It seems appropriate for this one.

It follows from the foregoing that the application should not be granted with respect to the 2,600 shares reserved for possible future option grants. No option price has been fixed with respect to those shares, and it should not be fixed prior to the time of the grant. If the present decision is upheld, standards will have been set for future applications by this company, so that ruling at that time should be a very simple matter. The present application in effect asks a free hand as to price with respect to the 2,600 shares. Furthermore, the record is not clear as to whether the price of the 7,400 shares already under option could be modified. Since price is an important factor in deciding whether the issue meets the statutory standards, lower limit of the option price should be definitely fixed.

III. Section 305(a)

Because of the nature of the reasons given in the concurring opinion annexed to the Commission's order of December 27, 1962, the examiner requested that both counsel brief the question whether Section 305(a) constitutes a bar to Commission approval of any and all stock option plans. Both take the position that it does not. The briefs are available to the Commission for its consideration.

In the circumstances of this case, the examiner concludes that he is bound not only by this Commission's action in approving a stock option plan in *The Montana Power Company*, 16 FPC 863, but by the opinions of the four Commissioners—all members of the present Commission—who subscribed to the majority and dissenting opinions accompanying the December 27, 1962 order. The majority and the dissent agree that Section 305(a) is no bar to plans of this type. That is the law of the case and this decision is written conformably to it.

---

[5] The examiner disregards the slight diminution in the $2.76 figure which would result from the small amount of additional stock that would produce lower earnings. It suffices for the present purpose to note the earnings dilution, irrespective of the precise amount.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the presiding examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated that:

(1) Black Hills Power and Light Company, is a public utility within the meaning of the Federal Power Act, and is subject to the jurisdiction of this Commission with respect to the issuance of shares under the stock option plan proposed in its application in this docket.

(2) The proposed stock issue is for a lawful object within the corporate purposes of the applicant.

(3) The proposed stock issue, to the extent of 7,400 shares, is compatible with the public interest, is consistent with the proper performance by the applicant of service as a public utility, will not impair its ability to perform that service, and is reasonably necessary and appropriate for its purposes, provided that the said 7,400 shares be issued at a price not less than $43.60 per share.

ORDER

WHEREFORE, IT IS ORDERED, that:

(A) The applicant is authorized to issue, for sale to its officers and employees, 7,400 shares of its common stock under the options heretofore granted subject to the approval of this Commission, provided that the purchase price stated in said options be changed from $37.25 per share to not less than $43.60 per share.

(B) This authorization is further conditioned upon its acceptance in writing by the applicant within 60 days of the issuance of this decision.

(C) The granting of this authorization shall not be construed as a waiver of any other applicable requirements of law.

(D) Authorization with respect to the remaining 2,600 shares applied for is denied, without prejudice, however, to the filing of an application for the issuance of those or other shares for sale at fixed prices under such options as the applicant may have granted, subject to Commission approval, at the time of any such filing.

ARTHUR H. FRIBOURG,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-1

ORDER GRANTING REHEARING FOR PURPOSES OF ADEQUATE CONSIDERATION

(Issued June 30, 1964)

Applications for rehearing of our Opinion No. 428 and order issued May 14, 1964 have been filed by the following parties: Mississippi Valley Gas Company on June 8, 1964, United Gas Pipe Line Company and Public Service Commission of the State of New York on June 11, 1964, Mississippi River Fuel Corporation, Western Kentucky Gas Company, Texas Gas Transmission Corporation, Indiana Gas and Water Company, Inc., and Louisville Gas and Electric Company on June 12, 1964, and Texas Eastern Transmission Corporation, Southern Union Gas Company, Laclede Gas Company, Wilmut Gas

and Oil Company, Natural Gas Pipeline Company of America and Memphis Light, Gas and Water Division on June 15, 1964. The Independent Natural Gas Association of America by letter filed June 15, 1964, has requested that the Commission reconsider the requirement of the order imposing refund obligations on United's customers and has requested that it be granted permission to participate as *amicus curiae* and file a brief. Because the thirty-day period after which the applications for rehearing may be deemed denied in accordance with Section 19(a) of the Natural Gas Act will expire on different days with respect to the several applications and because the issues in this case are complicated, we deem it appropriate to grant the applications. This will enable us to pass upon them at one time and give adequate consideration to the issues raised.

Under Section 1.34(d) of our Rules an answer to applications for rehearing may be filed when rehearing is granted. Since we are here granting the applications only to permit more orderly and more adequate consideration and have not yet determined the specific areas, if any, to which we wish to give further consideration, we do not believe answers are necessary at this time. We shall of course by further order provide all parties an opportunity to respond to the petitions on those matters which we conclude warrant our further consideration.

Our Opinion and Order of May 14, 1964, requires the filing of rates and refunds within 45 days. Because an order upon the applications for rehearing will not be issued within this period, the requirements of paragraphs (B), (C), and (G) should properly be stayed. Accordingly, United is authorized to continue collecting the rates proposed in the present docket subject, however, to all terms and conditions heretofore imposed and to its undertaking to make refunds.

The Commission orders:

(A) The applications for rehearing filed by the parties referred to above are hereby granted for purposes of more orderly and more adequate consideration.

(B) The requirements of paragraphs (B), (C), and (G) of our Opinion and Order No. 428 issued May 14, 1964 are hereby stayed pending further order of the Commission.

(C) The Independent Natural Gas Association of America is hereby granted permission to participate in these proceedings as *amicus curiae* and to file a brief when appropriate upon further order of the Commission.

APPLICATIONS OF PRODUCERS OF NATURAL GAS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY DISPOSED OF DURING THE PERIOD OF JANUARY 1, 1964 THROUGH JUNE 30, 1964; SERVICE BEGINNING SUBSEQUENT TO JUNE 7, 1954.

PRODUCER,# DOCKET NO. AND PURCHASER#	FIELD	STATE	COUNTY	DISPOSITION DATE	DISPOSITION [1]
